# Executive Summary

# Goals

The 2022 Active Transportation Plan for unincorporated Sacramento County is a tool for guiding County staff, public officials, residents, and developers to build a balanced transportation system that supports and encourages active modes of travel. Active transportation includes walking, biking, and rolling (mobility devices, skateboards, scooters, etc.). The primary purpose of this Plan is to promote and encourage people to choose walking, biking, and rolling through the creation of safe, comfortable, connected, and accessible walking, rolling and biking networks, encourage alternatives to single-occupancy vehicle trips and improve access to transit. Specifically, this plan seeks to:

- Create safe and comfortable places for residents, workers, and visitors to walk, bike, and roll
- Provide active transportation access to neighborhood destinations and neighboring cities and counties

- Prioritize active transportation improvements in communities that rely on walking, biking, rolling, and public transportation
- Maintain the active transportation network in a state of good repair
- Support and expand educational programs that support walking, biking, and rolling
- Implement the recommended infrastructure projects using all available funding sources

This Plan provides a prioritization method to implement infrastructure recommendations in a phased, manageable way. This Plan will replace the Pedestrian Master Plan (2007) and the Bikeway Master Plan (2011) within the Sacramento County General Plan.

Investing in improvements to countywide walking and bicycling networks creates lasting impacts on both individuals and their communities. Developing safe, comfortable, and

accessible physical environments has been shown to:

- Increase the livability and quality of life of an area
- Increase recreational opportunities through improved access to our spaces and amenities
- Decrease the risk of pedestrian- and bicycle-involved injuries
- Provide affordable transportation options for low-income and disadvantaged residents
- Reduce visual and noise pollution from automobiles
- Support improved access to public transportation
- Improve air quality through reductions in vehicle miles traveled and reduction in single-occupancy vehicle trips

Many existing and proposed projects will continue to transform Sacramento County’s local and regional transportation environment. As both infrastructure and travel patterns shift from new developments and changing office environments, there is potential to build infrastructure more supportive of neighborhood trips. The recommendations proposed in this Plan lay the foundation for a more active, connected, accessible, and safer Sacramento County.

# Recommendations

The County developed the 2022 Active Transportation Plan through a robust community engagement process. Throughout two engagement phases, the County engaged with hundreds of residents and received thousands of online interactions from County stakeholders. The engagement process led to recommendations of 194 pedestrian improvement locations, 192 miles of sidewalk gap closures, 1,218 miles of bicycle facilities, and a collection of policy and programmatic recommendations.

The County prioritized infrastructure projects for implementation based on the following factors:

- Safety and comfort
- Connectivity and access
- Equity
- Project complexity

The ATP ranked all recommendations, then determined a priority network which includes 55 pedestrian spot improvement locations, 32 miles of

sidewalk gap closures, and 185 miles of bicycle recommendations. Priority network projects directly respond to the the safety, connectivity, comfort, and equity concerns raised through the needs analysis and community engagement process. Many prioritized projects fall on either the pedestrian- or bicycle-high injury network, directly responding to safety needs, or close a vital gap/remove a barrier to walking, biking, and rolling in unincorporated Sacramento County.

Prioritized projects are one piece of the overall active transportation network; the Plan also provides recommendations on programs in multiple categories: education, encouragement, support, safe routes to school, evaluation, and infrastructure.

These improvements across the County supporting active modes will transform the transportation environment, making it safer, more practical, and more enjoyable to walk, bike, or roll around Sacramento County.

# Chapter 1: Introduction, Vision, and Goals

# Vision

The 2022 Sacramento County Active Transportation Plan for unincorporated Sacramento County aims to improve the safety, health, and quality of life of people who live, work, and play in unincorporated Sacramento County through transportation infrastructure, programs, and policy improvements. These enhance the safety, comfort, and practicality of walking, biking, rolling for people of all ages and abilities.

# Purpose

The 2022 Plan is Sacramento County’s first active transportation plan. The Plan focuses on walking, biking, and rolling (wheeled mobility devices used by people with disabilities, strollers, scooters, skateboards, etc.). The Sacramento County Active Transportation Plan (ATP) analyzes existing conditions and provides policy, program, and infrastructure recommendations to improve active transportation within unincorporated Sacramento County. Throughout the development of the Plan, community members shared their experiences, challenges, and vision of walking, biking, and rolling across the County. The ATP will:

- Recommend infrastructure improvements for people who walk, bike, and roll
- Propose new routes for people who walk, bike, and roll
- Work towards making walking, biking, and rolling easier, safer, and more comfortable for people of all ages and abilities

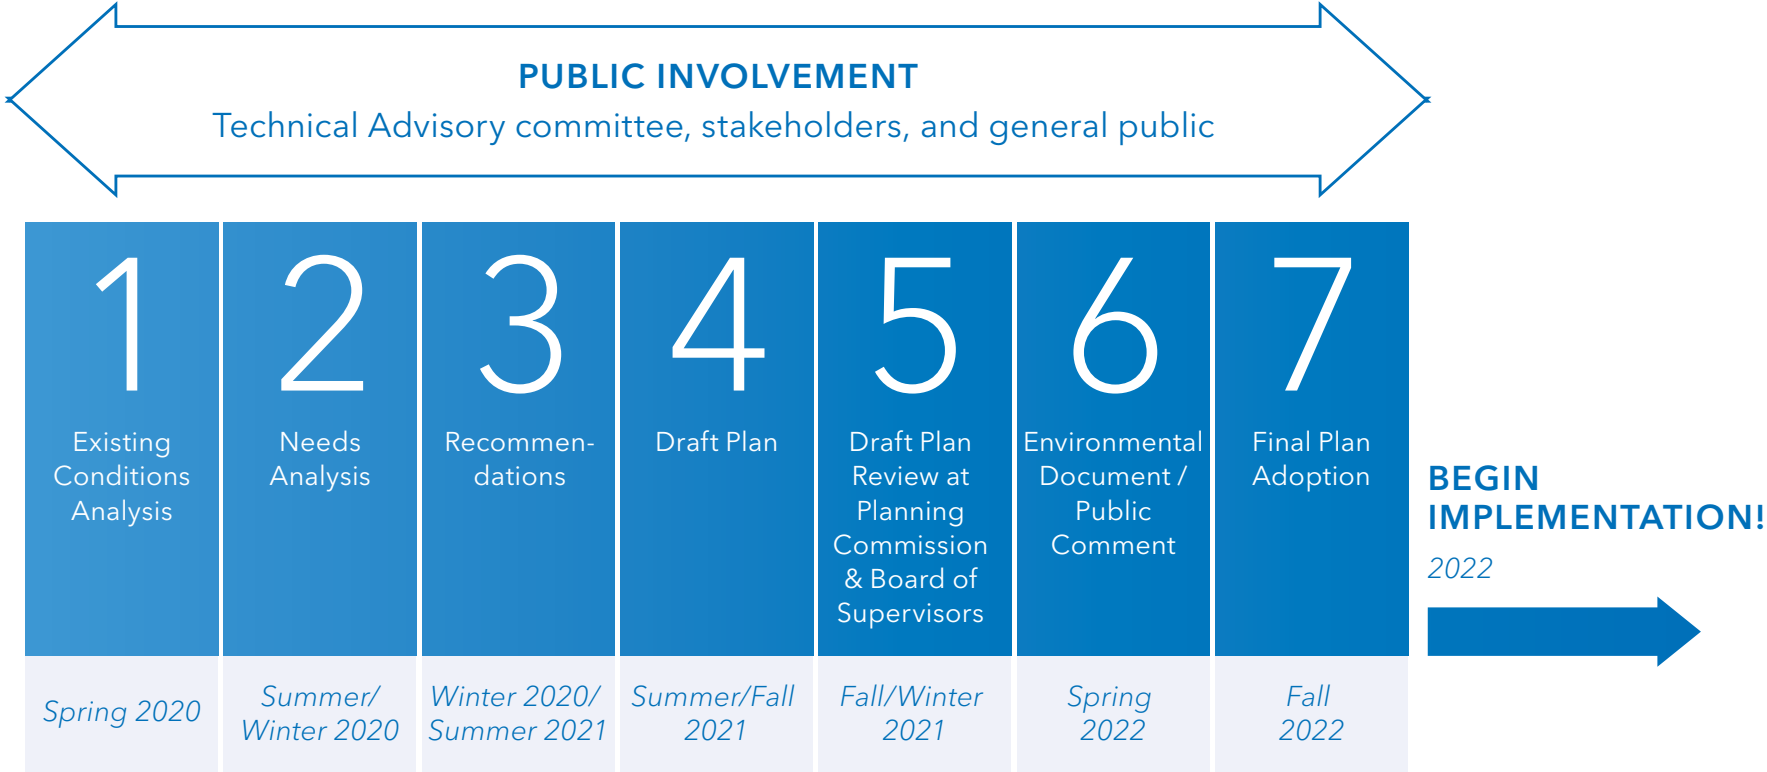

The County recognizes the importance of regional connectivity and has coordinated with neighboring jurisdictions to foster compatibility with other planning efforts and improve connectivity and access across the entire County. The Plan does not provide recommendations within the County’s seven incorporated cities: Citrus Heights, Elk Grove, Folsom, Galt, Isleton, Rancho Cordova, and Sacramento City.

# Plan Development

The County developed the ATP over five phases to gain approval and begin implementation. Each phase built upon the analysis and community feedback from the prior phases. The timeline in **Figure 01** lists each stage and when it occurred during the Plan's development.

Figure 01. Plan Development

# Climate Change

The ATP works towards many of the goals and measures of Sacramento County's Climate Action Plan (2021). Implementing infrastructure, policies, and programs from the ATP is one of the tools that Sacramento County can use to follow through on Climate Action Plan measures to reduce greenhouse gas emissions from community-wide activities and government operations by 2030. The Plan supports the following measures from the Climate Action Plan:

- Measure GHG-11: Reduce emissions from new residential and office/business professional development vehicle miles traveled (VMT). The County will achieve a 15% reduction in daily VMT compared to the regional average for all new residential and office/business professional development in the County

- Measure GHG-15: Improved pedestrian networks and facilities. The County will update the Pedestrian Master Plan to reduce barriers to walking and increase mobility for all users of the roadways
- Measure GHG-17: Improved bicycle network and facilities. The County will improve the bicycle network to provide for safe and convenient bicycle travel through implementation of the Bicycle Master Plan and the improvement of bicycle infrastructure

# Goals and Objectives

The goals and objectives of the ATP reflect the priorities expressed by the community throughout the public engagement process. Through discussions with the Sacramento County Bicycle Advisory Committee (SacBAC) and Disability Advisory Commission and listening to the community throughout the engagement process, the County established four goals based on community priorities and their vision for the future. Each goal includes a set of specific implementation measures. These goals and objectives guide infrastructure and program recommendations and the work of County staff to improve livability and active transportation safety, connectivity, comfort, and practicality across Sacramento County.

# Goal 1: Safety and Comfort

**Sacramento County will be a safe and comfortable place for all people to walk, bike, and roll.**

**Implementation Measures:**

- Increase walking and biking commute trips annually by 100% of 2010 numbers (2010 trips are about 4,000 and 4,500 trips respectively) for all trips by 2030
- Invest in new or upgraded bicycle and pedestrian facilities that increase the level of comfort and safety for people of all ages and abilities
- Increase the safety and comfort for people walking, bicycling, and rolling along high-injury corridors
- Provide safety enhancements at major intersections near important community destinations, such as schools, parks, and transit stops
- Reduce the number of severe injuries and fatalities involving people walking, bicycling, and rolling through infrastructure, education, and encouragement programs. Direct education programs at all roadway users, people walking, biking, rolling, and driving
- Reduce bicycle- and pedestrian-involved collisions and injuries by 50% of 2010 levels (2010: 208 collisions) by 2030
- Increase tree canopy coverage (percent of land covered) over pedestrian and bicycle facilities across unincorporated communities.
- Improve lighting in neighborhoods and along designated walking and biking routes
- Create a comfortable and aesthetically interesting street environment for people walking, biking, and rolling
- Strive to adopt innovations in design and engineering and participate in new best practices from federal, state, regional and local leaders in active transportation
- Monitor bicycle and pedestrian collision data to identify trends and specific problem areas
- Provide walking, bicycling, and rolling amenities (e.g., water fountains, shade trees, benches, lighting, parking) at key destinations such as job centers, transit stops, and parks

## Goal 2: Connectivity and Access

**Sacramento County residents will have access to neighborhood destinations by walking, bicycling, and rolling and can seamlessly connect to networks in incorporated cities; Sacramento County residents will travel more by active transportation modes.**

### Implementation Measures:

- Ensure walking, bicycling, and rolling routes connect to both neighborhood-serving destinations—such as schools, libraries, parks, and transit stations—and regional destinations such as job centers and major commercial areas
- Make bicycling more attractive than driving for short trips of five miles or less by developing and maintaining a bikeway system that provides direct, safe, and convenient travel by active transportation throughout neighborhoods in Sacramento County with connections to adjacent municipalities
- Eliminate gaps in the bicycle and pedestrian networks to improve connectivity and physical access between neighborhoods and destinations
- Implement the Sacramento County ADA Transition Plan (2020). Refer to the ADA transition Plan available on the County's website for more details
- Use Universal Design Principles when designing separated and/or protected bikeways to ensure curb accessibility for people taking transit or paratransit and for people of all abilities who need direct curb access. Design Principles may include providing transit boarding islands, designing buffer areas that are wide enough to allow loading and unloading from vehicles (including transit and paratransit vehicles), and providing connections to safe crossing points that provide sidewalk access
- Integrate land use and transportation planning to provide for more, safer, and accessible walking and bicycling trips
- Provide connections across creeks, railroad crossings and rivers, freeways, and high-speed/high volume arterials and through existing gated communities, walls, and cul-de-sacs to access schools, activity centers, and transit stops
- Provide safe and secure bike parking and other end-of-trip facilities at key destinations such as job centers, transit stops, and parks
- Collaborate with local jurisdictions within the County as well as adjacent counties and SACOG to integrate existing active transportation facilities and cooperate in developing new facilities to create a uniform, physically accessible and connected active transportation network
- Develop a regional active transportation wayfinding system that allows all people, regardless of ability, to easily navigate major destinations and trail systems

# Goal 3: Equity

- Through partnerships with community groups and coordination with local and regional agencies, develop programs, including Safe Routes to School, that promote and encourage active transportation as a viable means of travel throughout the County
- Promote Sacramento County's 311 system for the public to suggest locations for new bikeways and walkways on an on-going basis
- Consider implementing a shared micromobility program to increase low-cost and environmentally-friendly transportation options within the County. This program should be implemented equitably across EJ areas and other locations with high concentrations of people walking and bicycling
- Study developing mobility hubs near SacRT light rail stations, high-ridership bus stops, and other high-demand walking, bicycling, and rolling areas

Active transportation improvements will prioritize the needs of communities in Sacramento County that rely on walking, biking, rolling, and transit.

Implementation Measures:

- Improve the safety and security of people walking, bicycling, and rolling in rural parts of the County, historically disadvantaged communities, and areas of concern for people with disabilities
- Focus on improving active transportation connections to transit stops and community destinations, giving priority to connections in disadvantaged communities
- Partner with community and advocacy groups to provide educational resources (for all road users) and walking and biking accessories (lights, helmets, etc.) to disadvantaged communities

- Create accessible and culturally appropriate opportunities for all people regardless of race, color, national origin, disability, age, sexual orientation, or income to engage in the decision-making process
- Coordinate with the ADA Transition Plan (2020) to maximize opportunities to create universally accessible sidewalks, intersections, and transit stops

# Goal 4: Maintenance

**Keep the active transportation network in a state of good repair and high usability.**

## Implementation Measures:

- Develop a multi-year maintenance and rehabilitation program that identifies cost-effective enhancements to existing or missing pedestrian and bicycle facilities
- Coordinate with maintenance stakeholders across departments and jurisdictions to share resources and establish facility inspection schedules
- Maintain (including street sweeping) designated facilities to be comfortable and free of hazards to people walking, bicycling, and rolling.
- Prioritize clean-up responses to hazards on commute corridors
- Ensure that the repair and construction of transportation facilities minimize disruption to the bicycling and walking environment. Walking and bicycling facilities will be reconstructed in the same or better condition than prior to construction or repairs. When closures or detours are necessary, provide or clearly indicate where accessible alternatives are
- Monitor and maintain bicycle parking and other support facilities
- Promote Sacramento County's 311 system for the public to report hazard and maintenance issues throughout the County
- Develop a communication protocol for facility closures/detours and network updates
- Develop and enforce a sidewalk maintenance program to ensure that adjacent property owners properly maintain the sidewalks (consistent with the County's Curb, Gutter, and Sidewalk Repair and Replacement Policy, 1992)

# Goal 5: Educate and Encourage

Expand established education and encouragement programs, and develop new education programs to encourage and support walking and bicycling.

Implementation Measures:

- Expand established outreach programs by securing ongoing funding, and expand and develop new education programs (for people walking, biking, rolling, and driving)
- Expand and support education programs targeted at people driving, including commercial drivers
- Promote educational and encouragement programs using community-specific messaging using all relevant communication mediums including local media, social media, print collateral, email lists, and partnerships with community-based groups
- Work with the County’s Department of Health Services on increasing physical fitness and working towards other public health objectives
- Work with Sacramento County schools and school districts to expand the Safe Routes to School Program. Encourage bicycle and walking education classes for students and their families
- Promote active transportation-related events and new facilities through local new media, and other relevant stakeholder groups
- Apply for recognition as Bicycle Friendly Community as determined by the League of American Bicyclists
- Support programs that help low-income residents own and operate a road-ready bicycle
- Support bicycle parking (bike valet) at major events and event centers
- Provide encouragement programs by seeking grant funding and other funding sources
- Support and expand programs that promote shared micromobility programs and help residents access, afford, and learn how to use the program(s)

# Goal 6: Implementation

Active transportation projects will be implemented across Sacramento County through street maintenance and improvements, private development, and external grant funded projects.

## Implementation Measures:

- Continue to allocate Capital Improvement Plan funding and other County resources to implementing bicycle and pedestrian facilities
- Actively seek new grant funding for bicycle and pedestrian facility planning, design, and implementation
- Assess the use of developer fees and/or improvement districts, and enforce fee submittal and compliance to contribute to improved active transportation facilities
- Require land development projects to finance and install bicycle and pedestrian facilities within the development as appropriate and where recommended in the Active Transportation Plan. These practices will ensure connectivity within the development and to existing or planned facilities that connect to the development
- Encourage bicycle parking, showers, changing facilities, and lockers at public and private buildings
- Prioritize pedestrian amenities at areas near transit stops and key community destinations (schools, parks, libraries, etc.)
- Conduct bicycle and pedestrian counts at selected locations annually (during the same days and times) to monitor changes in bicycle and pedestrian trips
- Measure the success of the Active Transportation Plan through user satisfaction surveys
- Track and report annually to SacBAC the success of the Active Transportation Plan based on bicycle lane miles and pedestrian projects

## Chapter 2: Existing Conditions

"The Active Transportation Plan would benefit my family and I by getting our streets safe enough to walk and feel secure in choosing to walk over driving. Also, exciting places to walk to would help encourage and uplift our community [to be] less reliant on fossil fuels to enjoy everyday life."

Anna Fairehrenreich

Stay-at-home mom, age 34  
South Sacramento County resident for 6 years

Walking and biking are closely linked to health and economic benefits<sup>1</sup>

Increased physical fitness and health

Low-or no-cost transportation options

Access to community assets and destinations  
*parks, schools, health care, shopping*

Reduced congestion and parking costs

Increased individual mobility

Connectivity and visibility of local businesses

Vibrant and welcoming streetscapes

<sup>1</sup>Cullen McCormick, "York Blvd: The Economics of a Road Diet," (2012)

*Green infrastructure, sidewalks, and speed feedback sign on Florin Road near Kanelos Lane.*

# Plan and Policy Review

Current active transportation documentation, plans, and policies that the future Sacramento County Active Transportation Plan will influence and be influenced by have been reviewed. Each document differs in overarching focus and approach related to the most relevant active transportation needs in the area, however general commonalities are present.

## Goals and Performance Measures

The following goals are consistent between many long-range planning and bicycle and pedestrian planning documents throughout the region with access, mobility, connectivity, safety, education, encouragement, and awareness being the most common goals.

- Provide a connected pedestrian and bicycle network throughout the jurisdiction
- Improve and/or enhance safety of people walking and bicycling

- Reduce emissions caused by vehicle travel
- Provide education to all residents, including people driving, walking and bicycling
- Support the enforcement of safety for all roadway users, including people walking and bicycling
- Acquire sufficient funding by identifying federal, state and local sources

A summary of Focus and Goal Categories found across regional and local plans is shown in **Table 01**.

The various plans were relatively inconsistent in their identification of goals, focus areas, objectives, strategies, policies, and implementation actions, however there were often common topics that were repeated across many of the plans. A full matrix of policies and actions found across the regional and local plans is included

*A person biking along the Florin Creek Trail.*

as an appendix to this document. The common topics generally relate back to the following:

- Invest in bicycle and pedestrian infrastructure as healthy transportation options
- Improve safety for people walking and bicycling
- Increase and improve access to employment, economic centers, and environmental justice communities
- Establish and expand on education, encouragement, enforcement, and evaluation programs
- Improve access to transit
- Collaborate with nearby jurisdictions to support a regional bicycle network
- Prioritize projects that improve access to environmental justice communities, improve safety, close gaps in the network, and low cost or privately funded improvements

Several active transportation documents adopted in the region have policies, goals or actions to implement active transportation related programs. These programs may include education, encouragement, enforcement, and/or evaluation. However, the actual implementation or expansion of these programs is difficult to determine, or not documented.

Active transportation in a rural setting is also an area of weakness in active transportation plans in the region. Very low density creates a network void of connected facilities and requires long distances to travel to reach destinations. As a result, the pedestrian mode share is far lower than suburban areas. The bicycle mode share suffers as well as most facilities that do exist are located on high speed, narrow roadways.

There are ample opportunities in suburban areas of the County to improve connectivity. Both pedestrian and bicycle networks can be expanded to ensure gapless connections to transit routes and create desirable routes to destinations within walking distances of various destinations. Active transportation in the County would be made further desirable by offering support facilities such as water fountains for people walking and dedicated bicycle parking facilities for people bicycling at key destinations.

This extensive review of active transportation documents is considered a baseline understanding for the goals and objectives that the Sacramento County Active Transportation Plan will need to address. Also, pointing out the differences and shortcomings between plans in the region will support the success of this plan.

Figure 02. Unincorporated Sacramento County

# Unincorporated Sacramento County Overview

## PLAN AREA OVERVIEW

This Active Transportation Plan covers the unincorporated areas of Sacramento County (**Figure 02**). Sacramento County is located in the middle of the 400-mile long Central Valley, 87 miles east of San Francisco, and 100 miles west of Lake Tahoe. Sacramento County has seven incorporated cities: Sacramento, Elk Grove, Citrus Heights, Folsom, Galt, Isleton, and Rancho Cordova. The County also contains a number of mature and new communities in the unincorporated area. Encompassing a total of 994 square miles, the County surrounds Interstate 80 (I-80) and US Route 50 (US 50) east of Yolo County and Interstate 5 (I-5) and State Route 99 (SR 99) north of San Joaquin County and east of Solano County. The County's unincorporated area is 764 square miles or about 80% of the total area.

The unincorporated County is mostly-developed and densely populated along the I-80 and US 50 corridors and along parts of the SR 99 corridor. The remainder of the unincorporated County is more sparsely populated with agricultural uses or undeveloped land.

The unincorporated areas of Sacramento County have a population of 592,911 (2019), which is approximately 40% of the total population of the County.<sup>2</sup> The unincorporated population has grown 5.3% since the 2010 Census, and the median age for the entire county has increased from 34.8 to 36.6 over the last ten years.

<sup>2</sup>United States Census American Community Survey (ACS), 2018

*River Road and the Sacramento River.*

## ENVIRONMENTAL JUSTICE COMMUNITIES

The Sacramento County General Plan Environmental Justice (EJ) Element (2019) identified EJ Communities that are considered disadvantaged compared to other parts of the unincorporated County. Focusing on EJ Communities allows the County to identify increased health risks and other environmental justice issues, including transportation, these residents experience. The EJ Element used the California Communities Environmental Health Screening Tool (CalEnviroScreen 3.0) and the Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) to identify disadvantaged communities based on socioeconomic and environmental characteristics.

*Man waits to cross street on Watt Avenue*

The four designated EJ Communities are North Highlands, West Arden-Arcade, South Sacramento, and North Vineyard. These communities are shown in **Figure 03**.

*A placemaking entry sign in Arden-Arcade.*

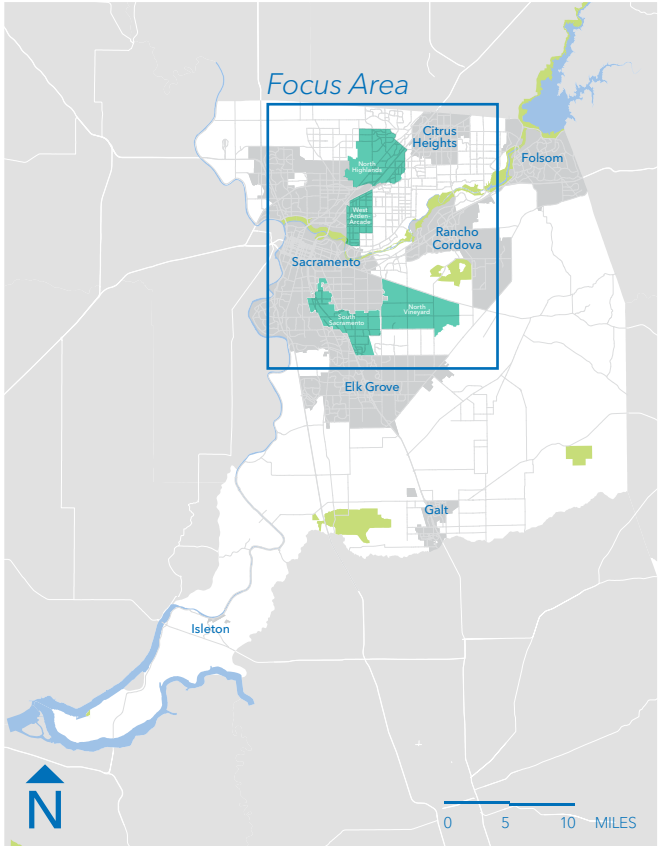

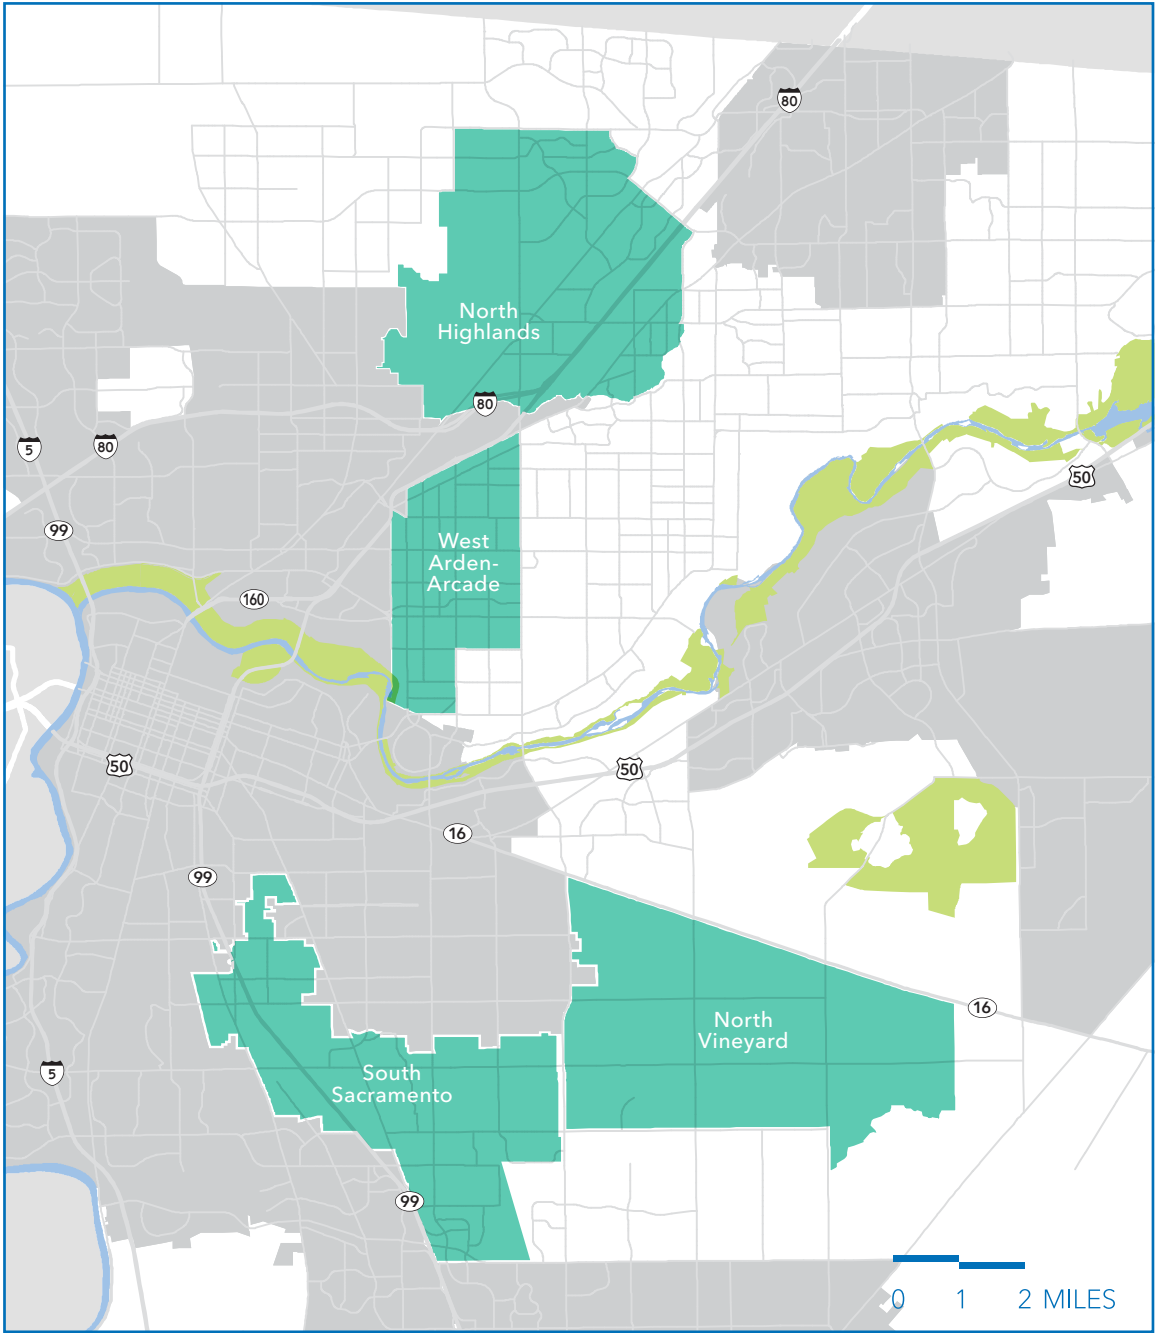

Figure 03. Environmental Justice Areas

Focus Map

Key Map

Legend

-  Environmental Justice Community
-  Unincorporated
-  Incorporated Cities

Median household income is much lower in the EJ Communities than in other unincorporated communities in Sacramento County. While all four County EJ Communities have relatively similar land areas, South Sacramento is the densest community with 67,362 residents. North Vineyards is the least dense, with only 1,733 residents and primarily rural agricultural land uses. Across the entire County, the areas with the highest population density are within unincorporated areas. Multiple neighborhoods within the South Sacramento area and communities within and around North Highlands are denser than any of the incorporated cities. The Arden-Arcade area is also one of the ten most dense areas of the County. Looking only at unincorporated areas, EJ Communities tend to have higher population densities than non-EJ Communities.

Sacramento County’s EJ Communities are a focus throughout this Active Transportation Plan. Transportation issues are intertwined with many of the concerns of EJ Community residents:

- Lack of connected, comfortable, and low-stress walking and bicycling infrastructure
- Poor access to healthy food
- Minimal physical activity
- Poor access to public facilities like parks, libraries, services, medical offices, and schools
- Exposure to air pollution
- Lack of tree canopy

**FUTURE POPULATION AND JOB GROWTH**

Many parts of unincorporated Sacramento County are experiencing growth, responding to high demand for additional housing and jobs. The County expects most future growth to occur in master planned communities (in various planning and development phases).<sup>3</sup> New developments will result in the potential for increased vehicle trips to and from these areas, and connecting these areas to the larger walking and bicycle networks (as well as transit) can facilitate walking, biking, and rolling trips and reduce automobile dependence for workers and residents of these areas. Sacramento County has approved eight Master Plan/ Specific Plan areas (**Figure 04**) for future residential and commercial development which include Florin Vineyard, Vineyard Station, Vineyard Springs, Cordova Hills, Glenborough, Easton, Mather South, and New Bridge.

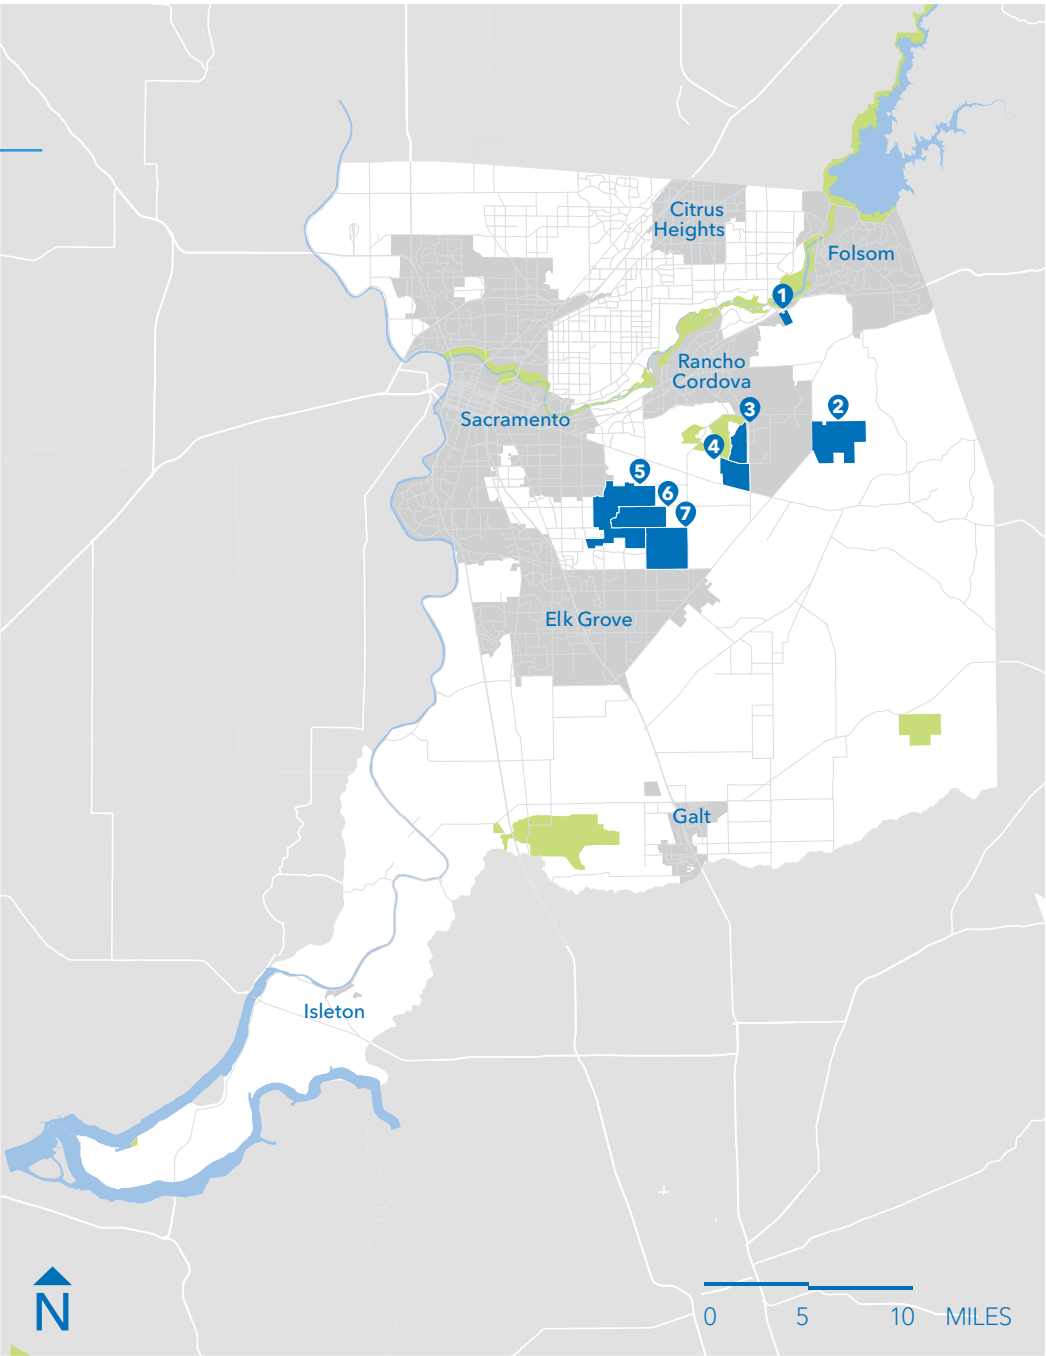

<sup>3</sup>Sacramento County expects most growth to happen within Master Plan development areas. However, data from SACOG suggests that there may also be additional infill growth in other areas of the County. Analysis of future growth for this plan relies on County data showing the majority of growth in the Master Plan areas.

Figure 04. Master Plan Areas

Legend

- 1 Easton Place
- 2 Cordova Hills
- 3 Mather South
- 4 NewBridge
- 5 Florin Vineyard
- 6 North Vineyard Station
- 7 Vineyard Springs

- Unincorporated
- Incorporated Cities

Many of the master plan areas are within the North Vineyard EJ Community. Other master plan developments are in more eastern parts of the County, east of Rancho Cordova.

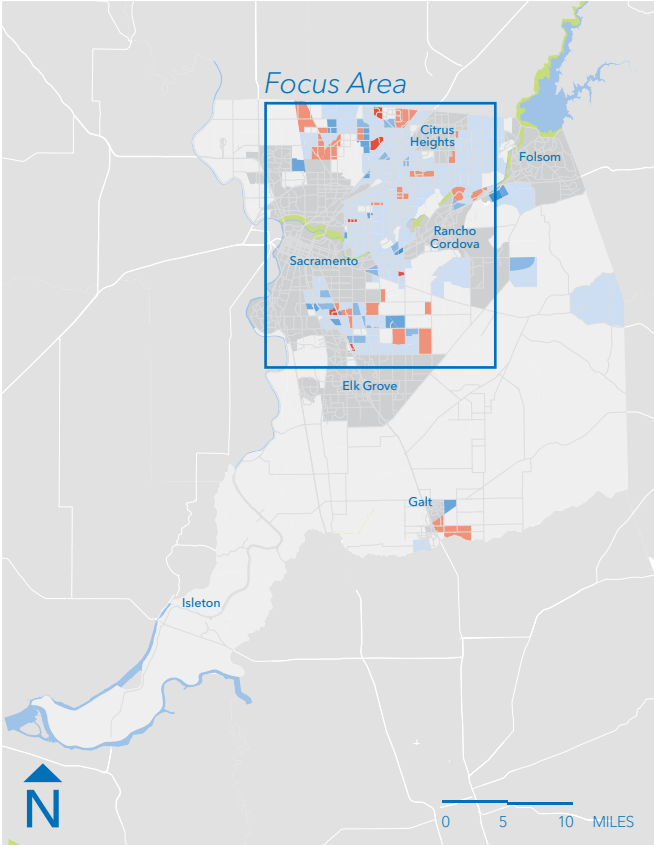

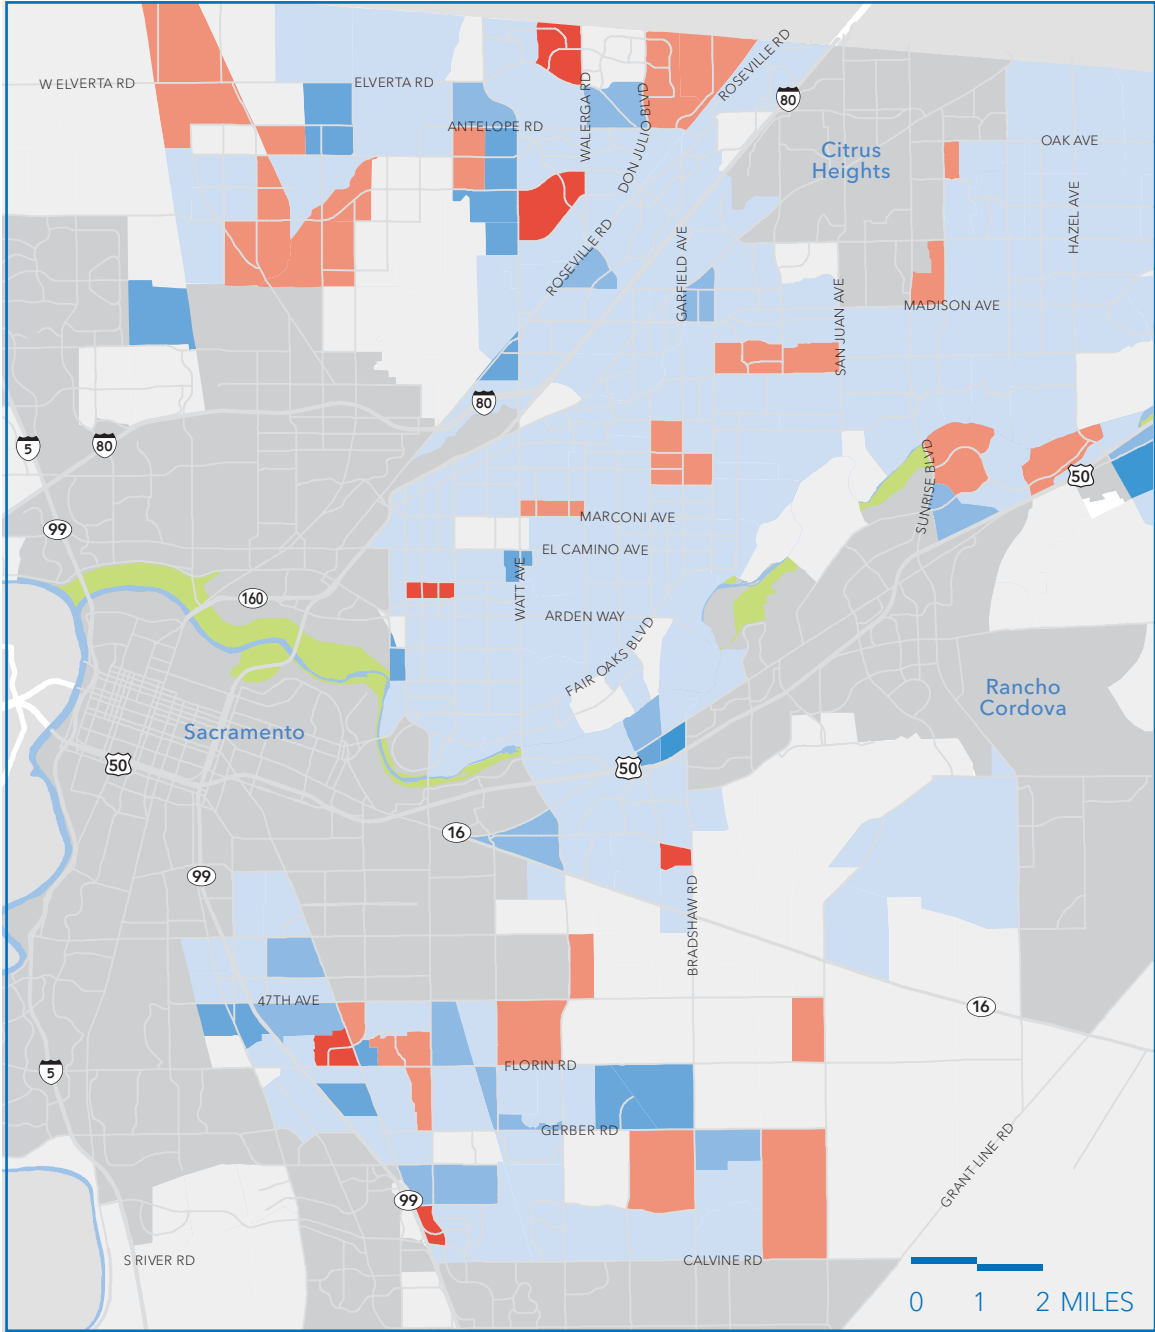

Population and job growth will not be limited to those master plan areas. Population and job growth models from the Sacramento Area Council of Governments (SACOG) predict population and job growth throughout the unincorporated County (**Figure 05** and **Figure 06**), especially in the South Sacramento and north-central parts of the County (the area between the City of Sacramento and Folsom). There are also multiple pockets of projected dense job growth along the Sacramento Regional Transit light rail corridors.

TRAVEL PATTERNS

Based on the 2019 ACS<sup>4</sup>, there are approximately 270,600 workers 16 years or older in unincorporated Sacramento County. The majority of workers commute by car, either alone (77.2%) or carpooling (10.2%), while 1% walk to work and fewer than 0.5% commute by bicycling. People taking transit represents 2.5% of workforce and over 8% work from home. The average commute time for all workers is 28 minutes (**Figure 07**).

While most unincorporated residents use cars to get to work, walking and biking have a more prominent role for neighborhood-focused trips. SACOG regional data indicates that about 9% of all-purpose trips are completed by walking and biking, which has increased from 7% in 2000. These local trips include people walking and biking to schools, parks, libraries, stores, community centers, and other essential services and neighborhood destinations.

<sup>4</sup>Based on the total workers in Sacramento County minus the workers in each incorporated City.

The average commute time for all workers is

28

MINUTES 2019 ACS

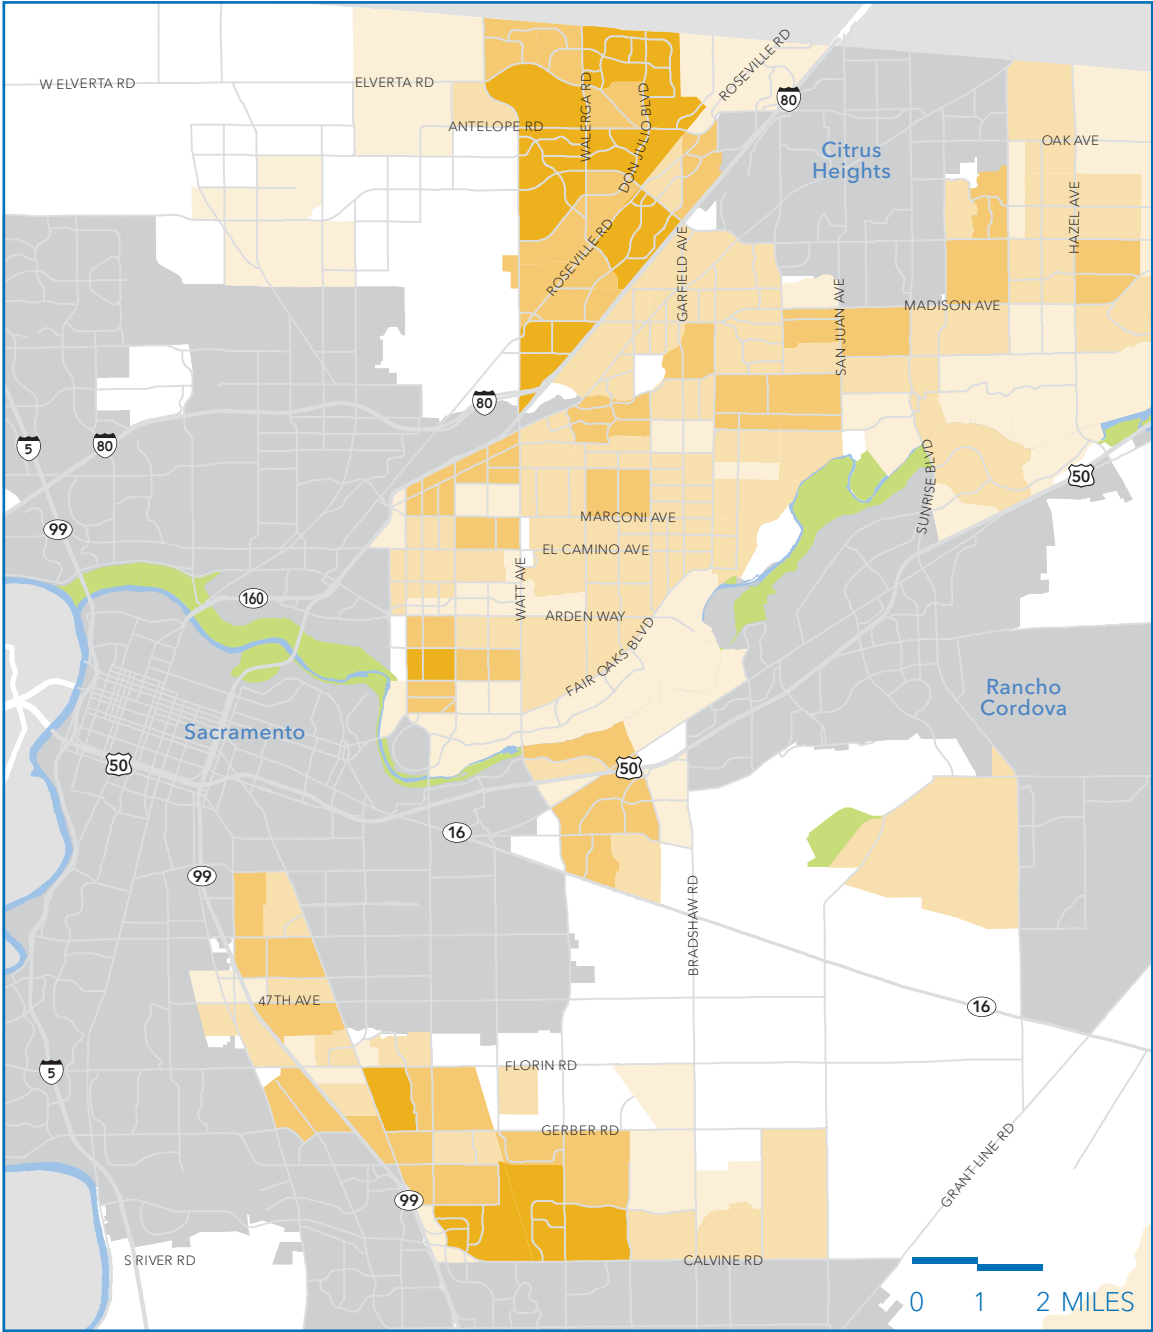

Based on the SACOG Travel Demand Model, South Sacramento, West Arden-Arcade, and North Highlands have the highest current densities of trips under five miles in length in the unincorporated County. These relatively short trips are key opportunities to convert car trips to walking or biking trips with a safe and comfortable active transportation network. This is shown in **Figure 08**.

*A bike lane on Power Inn Road, entering the Florin Neighborhood, north of Geneva Pointe Drive.*

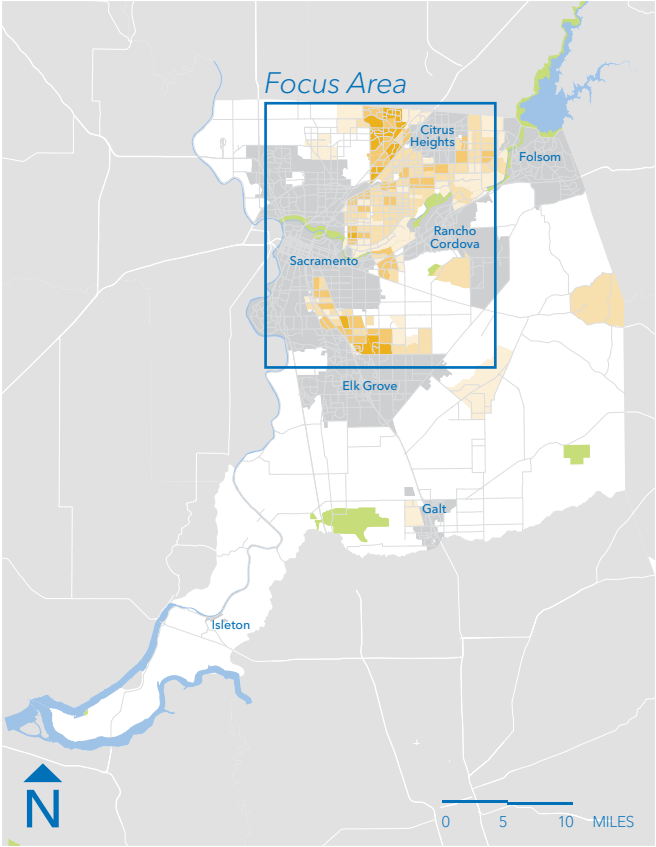

Figure 08. Concentration of Trips Less Than Five Miles

TRIPS LESS THAN FIVE MILES

## PUBLIC TRANSPORTATION

Sacramento Regional Transit (SacRT) buses and light rail run throughout the County, with a total annual ridership of about 21 million passengers in 2019. Across the County, SacRT has over 5,000 bus stops; about 1,050 bus stops (21%) are within unincorporated Sacramento County. The light rail carries an average of 40,000 trips per day, SacRT buses carry 37,000 passengers per day (weekday average). Most light rail routes run within the City of Sacramento; however, the Gold Line runs along Folsom Boulevard between Sacramento and Folsom, with five stops in unincorporated areas. Those stations are Watt/Manlove, Starfire, Tiber, Butterfield, and Hazel. In addition to those Gold Line stations, residents near South Sacramento may also use the Blue Line that, in this segment, generally runs north-south.

*A SacRT bus stopped on Morse Avenue.  
The bus stop includes a shelter.*

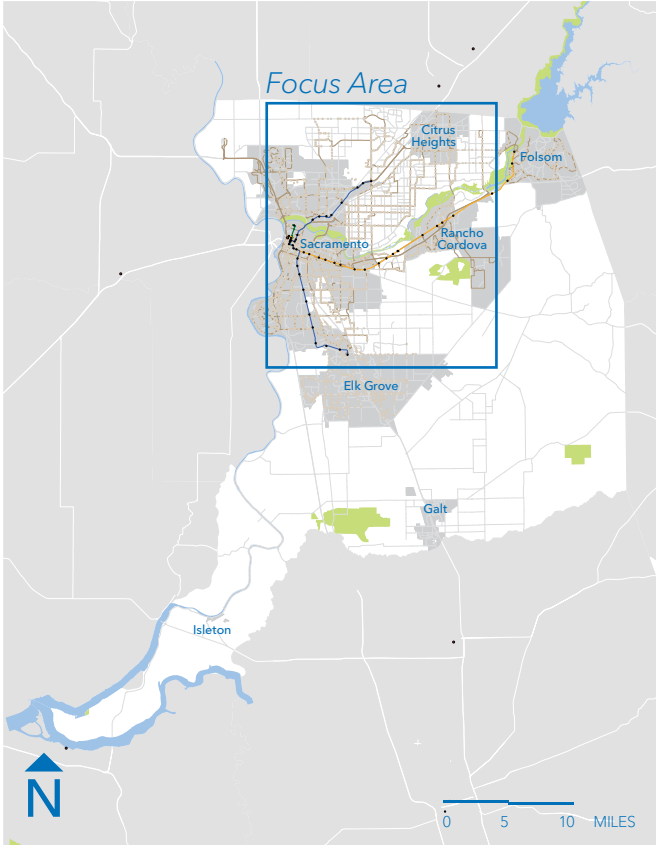

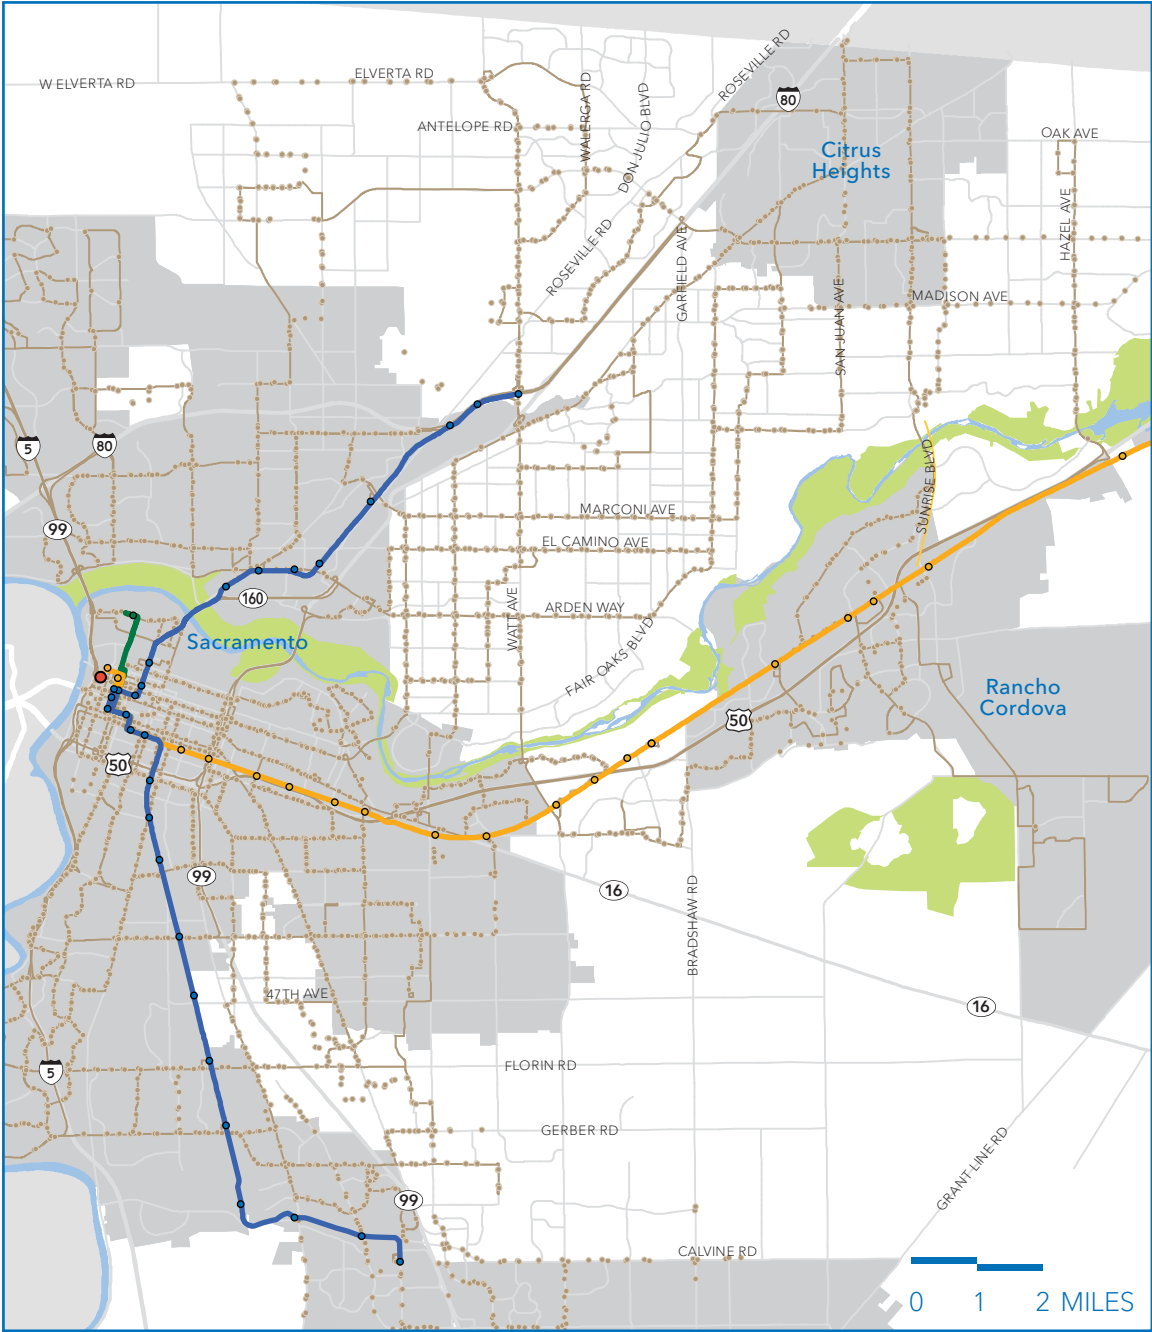

Improving walking, biking, and rolling access to bus and light rail stations will make it easier and more comfortable for transit riders to reach stops. The improvements, combined with projects previously identified by the ADA Transition Plan, can also potentially generate additional riders by providing practical options to walk, bike, or roll to and from the transit stop. In addition to sidewalks, trails, and bicycle facility improvements, stop amenities (benches, trash cans, shelters, etc.) can enhance the streetscape and create a more pleasant place for transit riders to wait for their vehicle away from elements. SacRT's system map can be seen in **Figure 09**.

# Active Transportation Network

The active transportation network in Sacramento County consists of sidewalks, bikeways, and shared use paths (trails), along with amenities that improve safety, comfort, and convenience for people biking or walking.

*Sidewalk with a rolled curb along Marconi Avenue.*

## EXISTING SIDEWALK TYPES

Figure 10. Sidewalk and Curb Types

### SIDEWALKS

Sidewalks provide dedicated space for people walking and using mobility devices to travel (**Figure 10**). Sidewalks are raised from the roadway and sometimes have a planting strip to increase separation from the car and provide greenery and potentially shade trees. Sidewalks are separated from the roadway by a curb. There are two types of curbs, rolled and vertical. Rolled curbs are sloped and can allow vehicles to park partially on the sidewalk, typically accommodating vehicle parking on narrow roads. This behavior can obstruct the travel path for people walking or rolling. Vertical curbs rise straight up to the sidewalk level and do not facilitate sidewalk mounting. Vertical curbs are the current standard within Sacramento County.

#### Vertical Curbs

Curbs rise straight up to the sidewalk level and are the current standard within Sacramento County.

#### Rolled Curbs

Curbs are sloped and can allow vehicles to encroach onto the sidewalk, providing more roadway width at the expense of pedestrian pathway conflicts.

#### Attached Sidewalks

Connect directly to the curb and provide minimal lateral separation from the roadway.

#### Detached Sidewalks

Separated from the curb with a buffer area, typically a planting strip or special paving material to provide greater separation from the roadway.

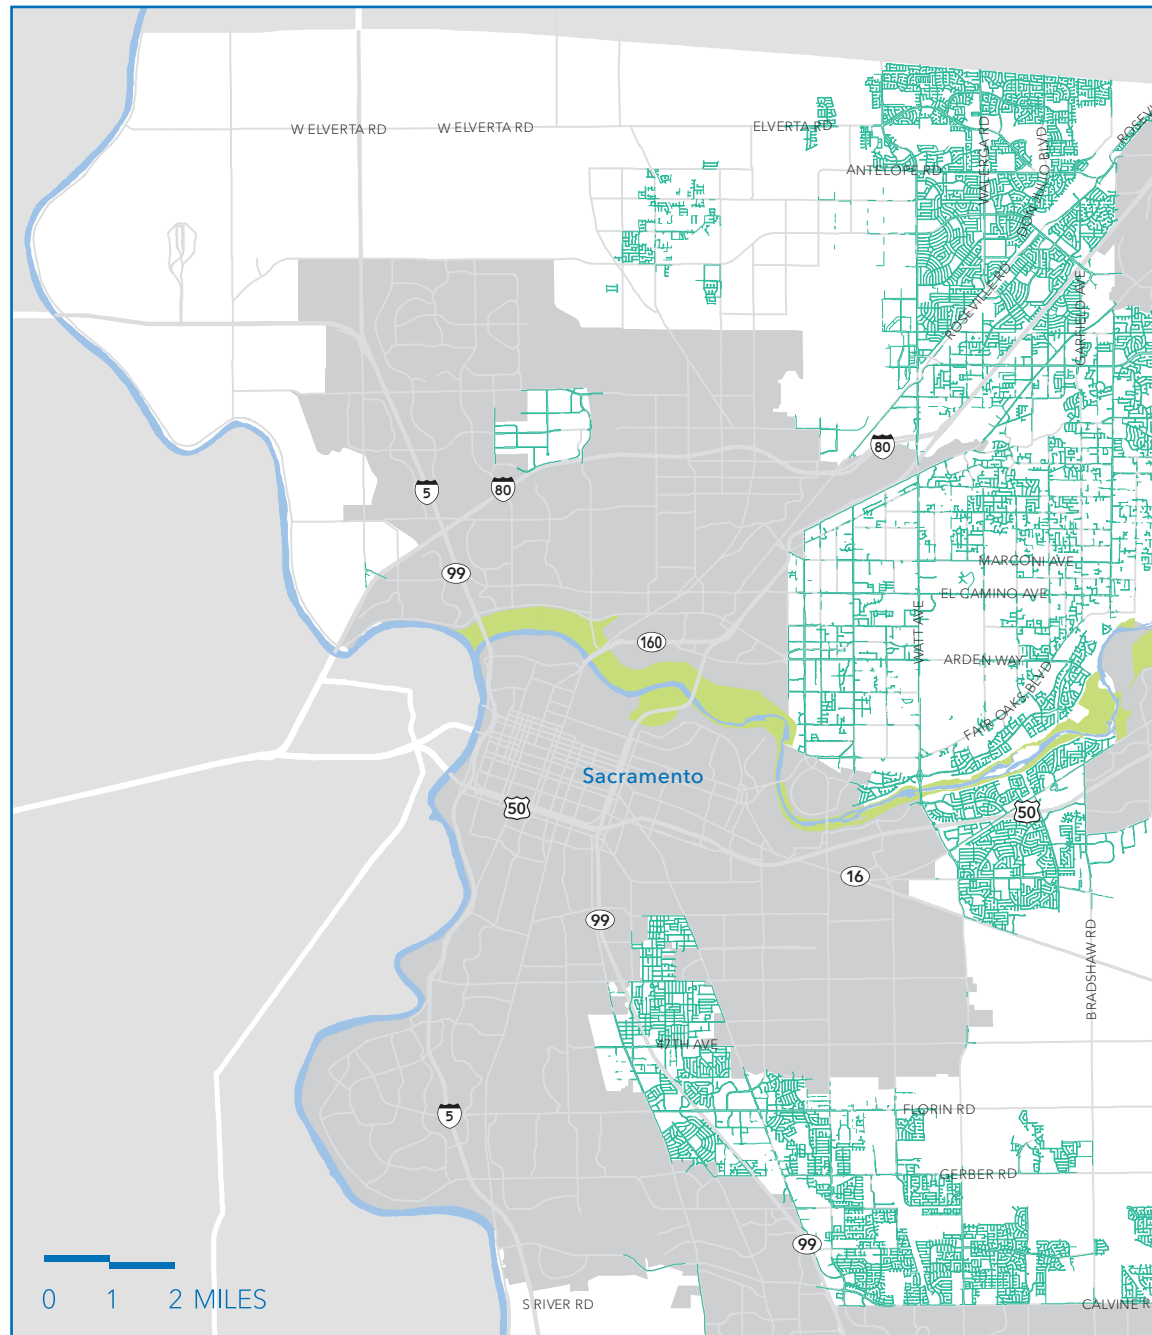

There are roughly 1,100 miles of roads throughout unincorporated Sacramento County. Only 13% of those roads have sidewalks on both sides of the street (**Figure 11**). Twenty-one percent of streets have sidewalks on one side of the street, while 66% of streets have no sidewalks. Combined, 87% of roads either have no sidewalks or sidewalks only on one side of the street. The concentration of sidewalks varies by community across the County. Sidewalks are generally complete on both sides of the road in the northern and central parts of unincorporated County which are more urbanized. Sidewalks are inconsistent and missing more frequently in unincorporated areas south of the City of Elk Grove, due to the rural nature of the southeast area of the County. Most roads in the North Highlands and South Sacramento communities have connected sidewalks. However, significant sidewalks gaps are present in the West Arden-Arcade and North Vineyard EJ Communities. Walking along streets without sidewalks or needing to access destinations

*A person walking on a sidewalk with a vertical curb on Florin Road near SR-99.*

on the side of the street without them places people walking closer to moving vehicles with no barrier or grade separation. These are stressful experiences for people walking and are not conducive to making walking a comfortable, practical option for most residents.

In addition to sidewalks, many other infrastructure components contribute to the pedestrian environment. Crosswalks, curb ramps, trails, crossing enhancements, lighting, tree canopy, street furniture, bus shelters, and other streetscape items can affect the safety, comfort, and routing decisions of people walking (and taking transit). Many of these items contribute to people’s perceived safety and actual safety, both in terms of traffic safety and personal safety. Items like street furniture (benches, trash cans, etc.) and bus shelters make streets more comfortable, practical places to be. The placement of street furniture and utilities needs to ensure sufficient clear space to maintain accessibility. Most people perceive an attractive walking environment as both safe and comfortable.

# Pedestrian Experience

Crossing the street, especially large-multilane streets, at mid-block locations or across slip lanes (free right turn lanes) can be uncomfortable. In many cases, aggressive driving and inadequate pedestrian crossing facilities create conditions that frequently lead to drivers failing to yield, improper stopping (stopping too close to the crosswalk), parking too close to intersections (limiting driver visibility of people walking), and other issues. Even on residential streets with less traffic, fast and aggressive driving can discourage walking trips. These concerns are heightened for the seniors and children, some of the most vulnerable roadway users, and most likely to access more neighborhood-focused destinations.

*A signalized school crossing of Calvine Road at Cliffcrest Drive.*

A slip lane at the intersection of Madison Avenue/Garfield Avenue.  
Source: GoogleMaps

A detached sidewalk with landscaping on Marconi Avenue

Sidewalk approaching an I-80 interchange in North Highlands

Throughout unincorporated Sacramento County, few residents can walk to a grocery store or their local school. There are large areas of unincorporated County without a large grocery store. Most unincorporated County residents cannot walk to a grocery within ten minutes; 20% of unincorporated residents and only 10% of EJ Community residents can complete this walk using low-stress roads. Improving connections to grocery stores within EJ Communities is consistent from EJ Element Policy EJ-13, providing safe, convenient opportunities to access healthy foods within these neighborhoods.

Fewer than half of unincorporated residents (40%) can access their closest school within a ten-minute, low-stress walk. Only 17% of EJ Community residents can access their local school within a ten-minute low-stress walk.

Further, poor walking conditions can hinder access to public transportation and limit potential bus stop amenities. Within a half-mile of all transit stops in unincorporated County, only 55% of the roads have complete sidewalks on both sides of the street. Almost 60% of unincorporated residents are within a low-stress ten-minute walk of a bus stop or light rail station. However, only 27% of EJ Community residents live within a ten-minute low-stress walk of a bus stop or light rail station. Improving walking infrastructure and crossing conditions will place more residents within a reasonable low-stress walking distance to stores, schools, public transit, and other essential neighborhood destinations.

## BICYCLE FACILITIES

The unincorporated County's bicycle network includes a mix of shared-use paths, bicycle lanes, and signed bicycle routes (**Figure 12**). There are about 304 miles of bicycle facilities, mostly bicycle lanes, across unincorporated Sacramento County (**Figure 13**).

Although the bicycle network can be dense in many urban regions, given the vast geography of the unincorporated County, the network as a whole lacks connectivity.

*Bike lane on Marconi Avenue. The Marconi Avenue/Mission Avenue intersection includes actuated bicycle signal detection.*

Figure 12. Existing Bikeway Types

**Shared-Use Paths (Class I)**

Dedicated paths for walking and bicycling completely separate from the roadway.

**Bicycle Lanes (Class II)**

Striped lanes for bicyclists. Bicycle lanes can also include striped “buffer” areas between the bicycle and travel lane or between the bike lane and parked cars (sometimes both).

**Bicycle Routes (Class III)**

Signed routes for bicyclists on low-speed, low-volume streets where roadway space is shared with motorists.

*A bike lane on Fulton Avenue, near El Camino Avenue.*

EXISTING BIKEWAY TYPES

**Shared-use paths (Class I):** Dedicated paths for walking and bicycling completely separate from the roadway.

*One of the trail bridges over the American River*

**Bicycle lanes (Class II):** Striped lanes for people bicycling. Bicycle lanes can also include striped “buffer” areas between the bicycle and travel lane or between the bike lane and parked cars (sometimes both).

*A bike lane on Butano Drive near Country Club Centre*

*A buffered bike lane on Hurley Way in West Arden*

**Bicycle routes (Class III):** Signed routes for people bicycling. In more urbanized areas, these are typically lower-speed, lower-volume roadways. In more rural areas, especially in areas without paved shoulders, bike routes can be on higher-speed and higher-volume roadways.

## ACTIVE TRANSPORTATION COMFORT

Sidewalks and bike lanes alone are not enough to provide a comfortable and inviting walking or bicycling experience in Sacramento County. Sacramento County experiences extreme heat in the summertime, with average temperatures above 85 degrees Fahrenheit between May and September. Shade, often provided by tree canopy, can encourage physical activity in hotter temperatures while beautifying and supporting the natural environment. Within EJ Communities, North Highland and South Sacramento have a smaller portion of their roadways with shade cover than other unincorporated communities. West Arden-Arcade roughly has a proportional amount of tree canopy compared to non-EJ Communities. The lack of continuous walking and bicycling facilities and inconsistent shade cover can create uncomfortable and stressful conditions for those who walk and bike.

*Twin Cities Road in the southern Delta area of Sacramento County.*

# Walking and Bicycling Safety

Between January 1, 2015 and December 31, 2019, there were 2,038 injury or fatal collisions involving someone walking or biking reported in unincorporated Sacramento County. Of these collisions, 1,000 involved a vehicle colliding with someone walking, and 1,038 involved a collision between a vehicle and someone biking (SWITRS - Statewide Integrated Traffic Records System). A summary of the frequency and relative severity of these collisions is presented in **Table 02**. During the analysis period, there were roughly the same number of pedestrian- and bicycle-involved collisions. The average severity of a collision involving someone walking is more than twice as severe as a collision involving someone biking and more than three times as severe as compared to the average severity across all injury crashes.

*Tree-lined sidewalk along Power Inn Road south of Calvine Road.*

An analysis of collision location and frequency revealed the following trends:

- Far more collisions involving people walking or biking (approximately 3 times as many) occur at intersections as compared to mid-block locations. This is likely due to the increased number of potential conflict points where vehicles and people walking or biking can interact.
- While many more collisions occur at intersections, the severity of injuries incurred along segments is slightly higher, potentially due to increased vehicle speed
- Based on collision severity, collisions involving people walking have twice the injury severity level as collisions involving people biking and more than three times the average severity level over all crashes

Collision types, frequency, and severity in the EJ Communities areas were further analyzed to help focus future investment towards locations that would directly improve any safety deficiencies in these communities. This analysis found that overall, the North Vineyard area had a very low occurrence of collisions involving people walking or biking, due to low density and geography of the area. The other three EJ Communities had comparable collision frequency and severity for collisions involving people walking and biking. The EJ Element also provides a comparison of bike and pedestrian collision rates per 1,000 residents<sup>5</sup>, showing that non-EJ Communities have the lowest collision rate with North Vineyard having a collision rate only slightly higher. South Sacramento however has a rate almost twice as high as non-EJ areas. North Highlands and West Arden-Arcade both have a rate more than twice that of non-EJ areas.

<sup>5</sup>Sacramento County Environmental Justice Element (2019), Figure 11

Table 02. Number of Collisions by Mode and Injury Severity

Collision Type	Number of Collisions	Fatal/ Severe Injury Collisions
Pedestrian Collisions	1,000	348
Bicycle Collisions	1,038	139
Vehicle Collisions	16,190	1,150

**CONTRIBUTING COLLISION FACTORS**

Collision factors provide some clarification on what actions or conditions contributed to each collision. These can include built environment conditions (street type/condition, lighting, etc.), environmental conditions (time of day, weather, etc.), and human behavior. People driving not yielding to people in crosswalks and people crossing not yielding to drivers at non-crosswalk locations were the most frequent contributing factors for collisions involving someone walking in Sacramento County. People failing to yield to vehicles outside of a legal crosswalk was by far the most frequent cause of collisions involving people walking regardless of the collision location, occurring more often than the next four primary causes combined in all scenarios and location types (vehicles violating pedestrian ROW, improper vehicle turning, unsafe speed, and unsafe starting or backing).

In terms collisions involving people biking, riding on the wrong side of the road (biking against the main direction of traffic) and improper turning (making an unsafe turning movement, or failure to signal) were the most frequent contributing factors to collisions. Riding on the wrong side of the road occurring more often than the next five primary causes combined at signalized intersections (traffic signal/sign violation, improper turning, person biking violating vehicle ROW, other hazardous violation, and unsafe speeds) and the next three primary causes combined along stop-controlled segments (improper turning, person biking violating vehicle ROW, and traffic signal/sign violation).

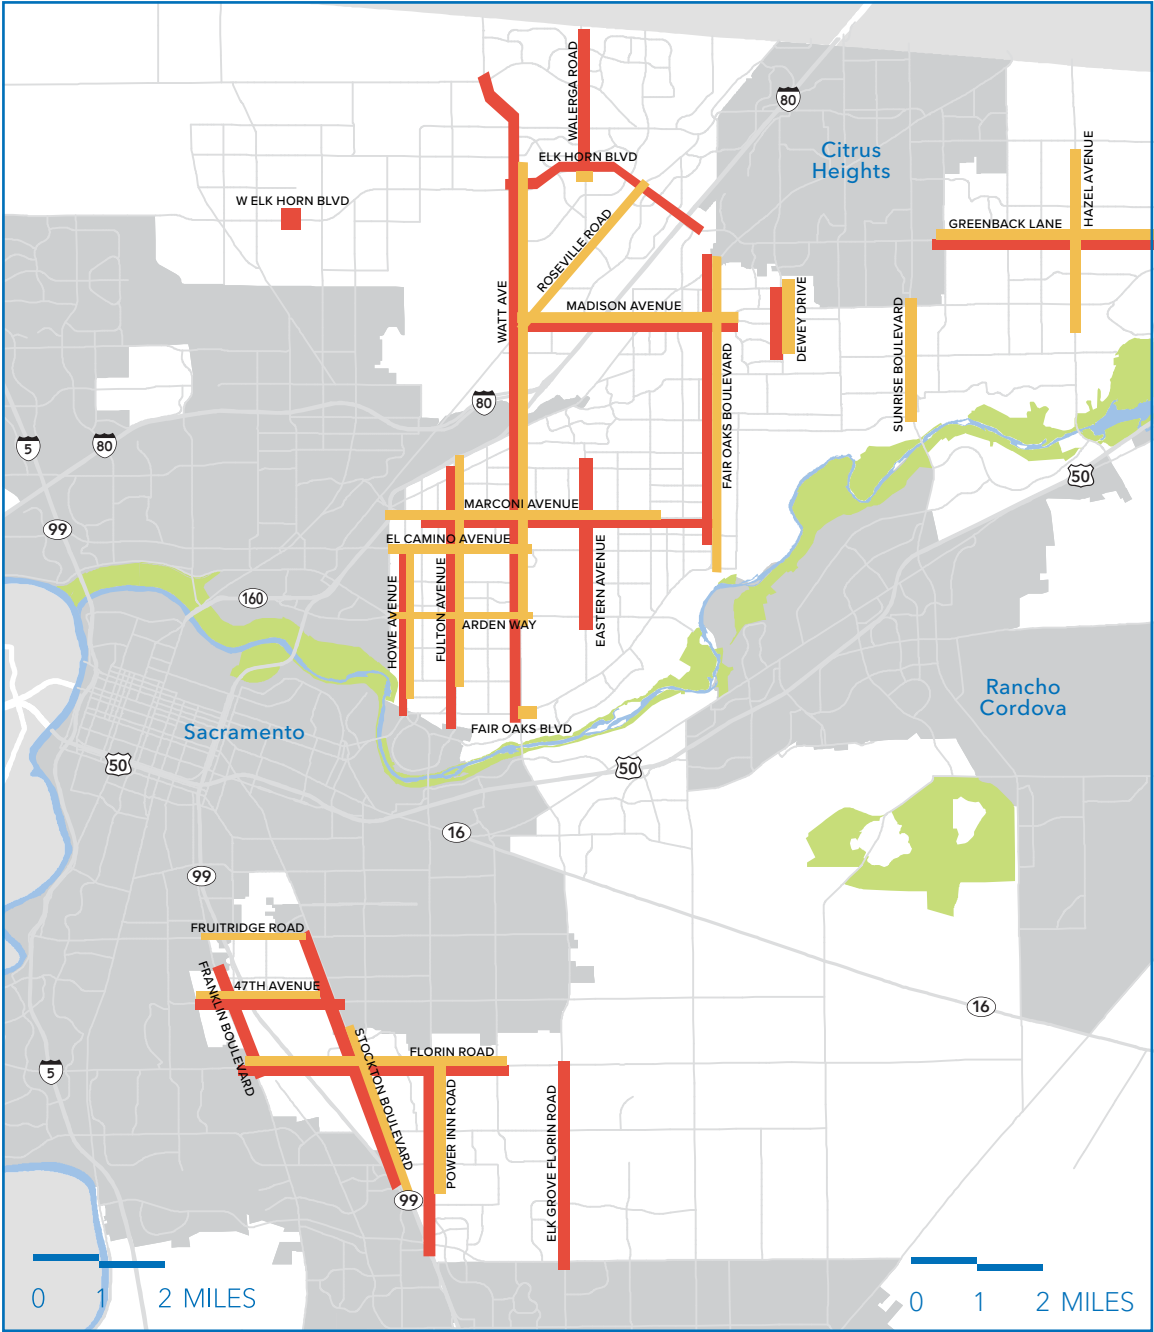

Pedestrian-involved collisions with high speed as a contributing factor resulted in the highest or second-highest injury severity across all locations. Bicycle-involved collisions with the high-speed factor caused the highest average collision injury severity at non-intersec-tion locations.

**HIGH INJURY NETWORK**

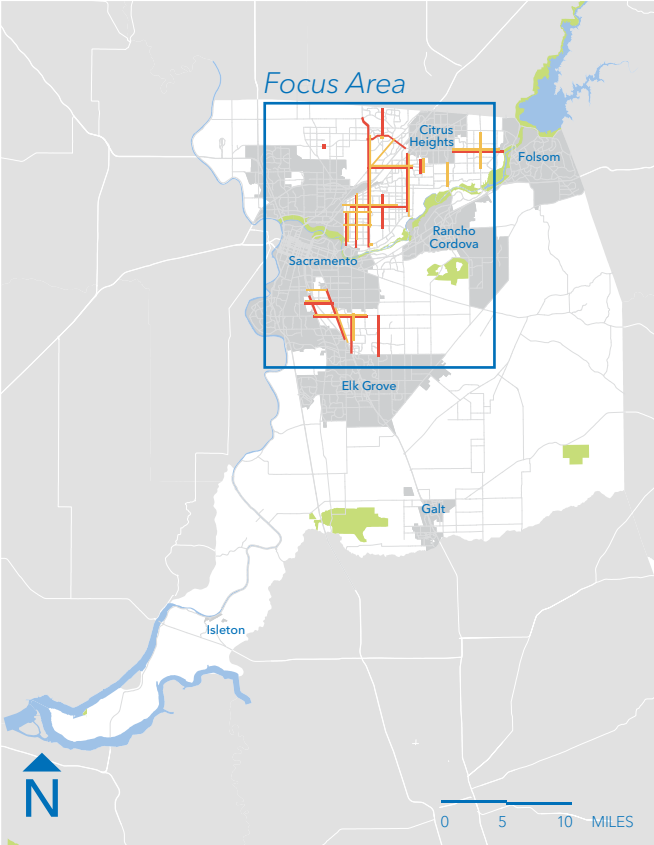

High-injury networks (HINs) were created to highlight corridors that have high concentrations of pedestrian-involved and bicycle-involved collisions, respectively. Each HIN is made of about 20 corridors. Corridors were selected for the HIN based on the both the frequency of pedestrian- or bicycle-involved collisions and the severity of the injuries. **Figure 14** shows the pedestrian and bicycle HINs.

The complete safety analysis, including information on the bicycle and pedestrian HINs, can be found in Appendix A-2.

# Chapter 3: Public Engagement

Item 6 - Draft Active Transportation Plan  
My dream street has...(If you are typing a phrase, add a hyphen between words).

"I currently walk in Fruitridge Manor. I feel like our community can prosper if we were given the resources to have more outdoor centered activities. ...I would like to walk around areas with a lot of shade and water."

Ken Chang

Age 32

South Sacramento resident for most of his life

# Engagement Strategy

Community engagement is an integral part of the planning process. The ATP included a thorough two-phased public engagement process, primarily done through virtual events due to the COVID-19 global pandemic. The County and its community partners made every reasonable effort to reach a diverse group of Sacramento County residents and stakeholders while following appropriate health and safety guidelines. The ATP’s Public Engagement Plan and detailed event summaries from all engagement phases can be found in Appendix B.

## Phase 1

The County led the first engagement phase from August 2020 through January 2021, with the goals of:

- Understanding perspectives and concerns around active transportation in Sacramento County
- Collecting feedback on the Plan’s goals and objectives
- Building awareness and enthusiasm around the Plan

## Phase 2

The County conducted the Phase 2 engagement between April and May 2021, with the intent to:

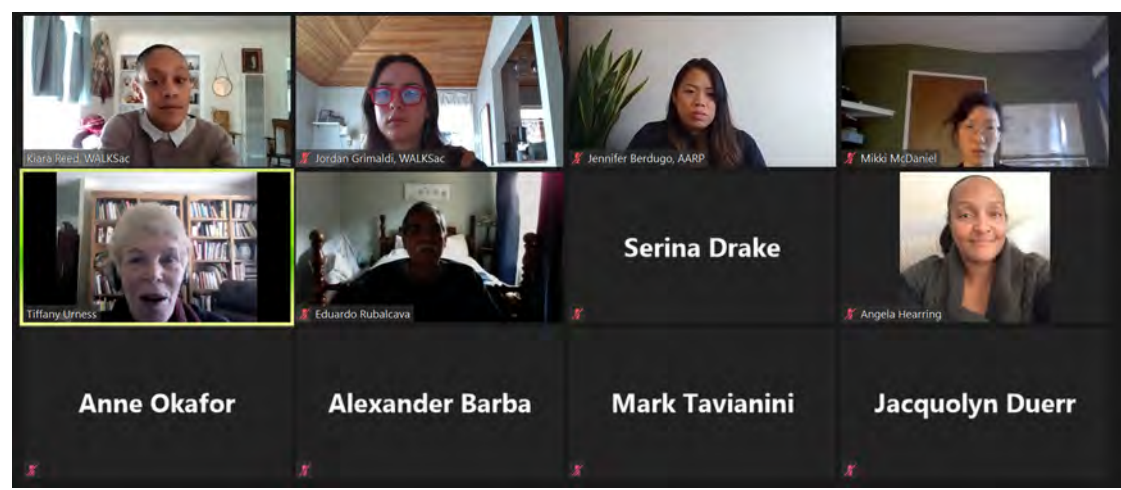

- Share and confirm the accuracy of the key themes and takeaways from the previous phase of public engagement
- Gather feedback on the Plan’s draft infrastructure recommendations
- Learn more about community members’ priorities for implementing active transportation projects

## ENGAGEMENT EVENTS

During Phase 1, project staff met with 37 different organizations through 23 stakeholder meetings. These organizations represent different stakeholder interests, such as Community-Based Environmental Justice Organizations, Health and Disability Organizations, Bike and Transportation Management Agencies, Youth and Older Adult Organizations, Government and Transit Agencies, and Advisory Committees (**Figure 15**). Nearly 200 community members and more than 40 stakeholder groups participated in virtual events during the Phase 1 engagement process. All events were virtual during Phase 1. Community members could also leave comments on an interactive webmap. Comments pointed out specific locations of concern. People also drew their current or preferred walking, biking, and rolling routes. About 300 comments, likes, and dislikes were provided on the webmap during Phase 1.

*A virtual meeting with the Sacramento Bike Hikers*

During Phase 2 engagement, the County engaged with over 50 residents at community workshops, over 80 residents across a series of in-person and virtual pop-up events (**Figure 16**), and received over 2,000 comments, likes, and dislikes on project recommendations.

Detailed community engagement summaries are located in Appendix B.

# Key Public Engagement Themes

Throughout the public engagement process, community members shared their active transportation concerns, needs, and desires. Several key themes emerged:

- **Walking and Rolling Challenges:** Sidewalk gaps, narrow shoulders, lack of shade trees, and uncomfortable crossings are significant challenges for those walking or rolling. Large intersections, railroad tracks, and other infrastructure components are barriers for many people
- **Biking Challenges:** Lack of dedicated bicycle facilities, sharing the road with high-speed vehicles on multilane roads, and lack of shade cover make it stressful and uncomfortable to bike throughout the unincorporated County

- **Access to Transit:** Transit stops and stations with few amenities (benches, shelters, etc.) create uncomfortable and undesirable places for people to wait for their transit vehicle. The lack of shade canopy (trees or engineered structures) can also be problematic in the hotter spring and summer months. Poor sidewalk conditions and lack of ramps can make it challenging to access transit, especially for seniors and people with physical disabilities. Residents also wanted to ensure that the design of new walking and biking facilities (i.e., adding bike lanes or curb extensions) improves and does not hinder transit access and travel

- **Connectivity:** Community members highlighted the need to build a more connected bicycle network that provides safe and comfortable routes to community-serving destinations like schools, parks, trails, and job centers. The need for better river crossings for active transportation users also emerged as a theme
- **Safety and Comfort:** Walking and biking are uncomfortable for many residents across the County due to many of the challenges mentioned above. A lack of active transportation infrastructure, combined with fast-moving vehicles with little or no separation from walking and biking users, impacts comfort and actual and perceived safety

**THIS PAGE INTENTIONALLY LEFT BLANK**

## Chapter 4: Infrastructure Recommendations

"If facilities connecting the community more widely to the only grocery store in the area were provided, I would take that path frequently and look at biking or rolling more often. Currently, the only north/south main road (Rio Linda Blvd) has high speeds and minimal pedestrian facilities."

Kenneth Isenhower

Transportation Engineer, age 31  
Rio Linda/Elverta

# Project Recommendations

Based on the needs, opportunities, and challenges identified through the existing conditions analysis, recommendations were developed through an iterative process with both County staff, partner agency stakeholders, and the community. This chapter describes recommended bicycle and pedestrian projects and provides additional information or toolkits for bicycle boulevards, wayfinding, and green infrastructure.

Recommendations described in this Plan serve as a foundation to create successful, well-used, and safe spaces for people to walk, bike, and roll. These planning-level project recommendations work together to build unincorporated Sacramento County's active transportation network and encourage more people to walk, bike, and roll. In addition to projects identified in this Plan, the County can also install bicycle facilities and pedestrian enhancements on other roadways as appropriate.

Projects outside of Sacramento County's unincorporated rights-of-way play an essential part in the overall completeness, connectivity, and reach of the transportation networks. When applicable, project recommendations have been made in these areas. However, implementing these projects requires additional coordination with other agencies and neighboring jurisdictions.

This Plan proposes pedestrian infrastructure improvements at 194 locations, 192 miles of sidewalks, and 1,218 miles of new or upgraded bicycle facilities (including study corridors).

While the Plan provides recommendations for bicycle and pedestrian projects, in some cases a more detailed master plan is needed. Such is the case for the American

River Parkway, where this Active Transportation Plan only provides a few specific project recommendation on how to improve connectivity to the parkway. A more detailed master plan is needed to improve active transportation connections to the American River parkway trail system for the unincorporated communities of Arden-Arcade, Cordova, Carmichael, Fair Oaks, and Orangevale. The plan would identify gaps in connectivity, needed access improvements, access to existing and future transit, access to schools, access to housing, and employment, connections into the City of Sacramento, Rancho Cordova, and Folsom's trail network and access for environmental justice communities.

# Pedestrian Recommendations

Pedestrian recommendations were developed based on the following steps:

- Incorporate the unbuilt recommendations from the previous countywide planning efforts
- Revise and add recommendations based on the data-driven needs analyses, future master-planned communities, feasibility, and public comment
- Review projects to ensure they form a cohesive, connected network that serves the entire County

## PEDESTRIAN RECOMMENDATIONS

This Plan recommends pedestrian infrastructure improvements at 194 locations across Sacramento County (**Table 03**) and 192 miles of sidewalk gap closures. Pedestrian spot improvement locations include infrastructure recommendations based on the type and size of streets

and the type of intersection control. Each intersection size and control combination has a specific set of infrastructure recommendations designed to improve safety, comfort, and access within that context. These contextualized recommendations provide a toolkit of potential solutions that the County can use to improve these locations' walkability. Specific improvements for each location will be determined on a project-by-project basis using engineering and planning judgement.

Intersection sizes are described below:

- Small intersections: Two small residential streets (people walking typically have to cross two or three vehicle lanes)
- Medium intersections: One small street and one collector street or two collector streets (people walking typically have to cross two to four vehicle lanes)

- Major intersections: One collector street and an arterial or two arterial streets (people walking typically have to cross at least four vehicle lanes)
- Interstate ramp: Any street with a highway interchange

Intersection traffic control falls under three categories:

- Signalized intersection
- Stop sign-controlled intersection (all-way or two-way)
- Uncontrolled intersection

A subset of 26 recommendations includes tailored recommendations specific to each location. These 26 locations are unsignalized locations within EJ Communities that are either along the pedestrian high-injury network or within a quarter-mile of a school. These important locations provide critical connections to schools, parks, and other neighborhood destinations within historically underserved communities.

**Figure 17** show the location of each pedestrian improvement. **Table 03** displays the number of recommendations in each category. These recommendations are defined in the Pedestrian Toolkit (pages 84-102). The full table of all 194 pedestrian improvement locations can be found in Table C-1 of Appendix C. The full list and maps of proposed sidewalk gap closures can also be found in Figure

C-1 and Table C-2 within Appendix C. Pedestrian Districts were developed by the County's Planning and Community Development Department and are commercial corridors that have or could have high volumes of pedestrian traffic where improvements should be concentrated. The districts were carried over as part of the 2007 Pedestrian Master Plan are also included within pedestrian recommendation maps.

Table 03. Pedestrian Recommendation by Intersection Size and Control Type

	Signalized	Stop-controlled	Uncontrolled	Total
Small Intersections	12	18	7	37
Medium Intersections	65	8	7	80
Major Intersections	44	2	2	48
Interstate Ramps	3	-	-	3
Specific Project Locations	2-	21	3	26
Total	126	49	19	194

## PEDESTRIAN TOOLKIT<sup>6</sup>

This Plan’s toolkit groups pedestrian infrastructure into six categories:

- Sidewalks, trails, and medians
- Intersection and street design
- Pavement markings
- Pedestrian-actuated beacons
- Street furniture
- Studies

Example infrastructure components from each of the categories are provided below.

<sup>6</sup> Items with an asterisk are included in the approved Neighborhood Traffic Management Program Tool Box. The Tool Box can be accessed here: <https://sacdot.saccounty.net/Pages/NTMP-ToolBox.aspx>

## SIDEWALKS, SHARED-USE PATHS, AND MEDIANS

### Sidewalks

Sidewalks provide dedicated space for people walking and rolling. Sidewalks are raised from the roadway and sometimes have a planting strip for increased separation from the street. Obstructions like utility boxes, signs, and poles can limit available sidewalk width. The County should install and move existing street furniture and utilities on sidewalks to maintain a clear path of travel; it is critical for physical accessibility. Items obstructing walking and rolling paths force people to use alternate routes or go around these objects on private property or in the street.

*Sidewalk on Florin Road, near Southgate Plaza.*

## Shared-Use Paths

Dedicated paths for walking and bicycling completely separate from the roadway. When paved with asphalt or concrete, trails can include markings to encourage the separation of modes.

*People jogging along American River Parkway trail.*

### Curb Extensions

Curb extensions push the curb into the street and can provide several valuable traffic calming and safety benefits. Curb extensions shorten the crossing distance for people walking or rolling, provide improved visibility at intersections for drivers, and provide additional pedestrian queuing space. Curb extensions can be installed at intersections or mid-block. They can be made with permanent materials like cement or implemented as a "quick-build" project with pavement markings, detectable warning surfaces, paint, and bollards/delineators.

*A curb extension with green infrastructure, Carolan Ave, Burlingame.*

### Curb Ramps

Curb ramps allow for smooth, accessible transitions between the sidewalk and street level. Curb ramps are essential for those with special mobility needs, strollers, and many other users. Ramps must be built to current ADA standards.

*The corner of Diamond Ranch Drive and Gerber Road with pedestrian countdown signal head and curb ramp with tactile warning surface.*

## INTERSECTION AND STREET DESIGN

### Intersection Redesign

Intersections are not always symmetrical. Intersections can have confusing or asymmetric designs when more than two streets come together or when two streets come together at non-90-degree angles. Design components like curb extensions, painted buffer areas, and medians can make these intersections more inviting, less stressful, and less confusing for active transportation users and people driving.

*The intersection of Fair Oaks Boulevard and Manzanita Avenue.*

### Free Right Turn Lane/ Slip Lane Removal

Free-right turn lanes facilitate increased vehicle throughput and faster turns at intersections at the expense of the safety and movement of people walking and biking. Rates of drivers yielding to people walking at slip lanes are much lower than at other crossing locations. Intersections with slip lanes and bike lanes also create a bike mixing zone, as people biking need to move away from the curb and across the right turn lane to continue straight through the intersection. Many designs can be implemented during the slip lane removal process, including bulb outs and other curb work to adjust intersection geometry. Removing slip lanes can impact traffic flow through the intersection; some impacts may be mitigated through signal timing and other engineering adjustments.

*Slip lane at Rockingham*

### Traffic Calming

Traffic calming is the implementation of roadway changes to slow down vehicle traffic. SacDOT can consider various tools to slow vehicle traffic, including speed bumps, chicanes, speed feedback signs, and other items. Traffic calming is also an essential component of bicycle boulevards (see page 114 for more details on bicycle boulevard elements).

*A speed table on Madison Avenue*

**Pedestrian Push Buttons and Signal Heads**

All new and redesigned intersections with pedestrian crossings need to be built to current ADA standards. These standards include using accessible pedestrian buttons and signal heads that audibly communicate information about location and pedestrian signal timing for those with mobility and visual impairments.

*An ADA compliant push button next to a curb ramp with tactile warning surface across from Kaiser Medical Center off of Morse Avenue*

## PAVEMENT MARKINGS AND CROSSWALKS

### Advance Yield and Advance Stop Markings

Advance yield pavement markings, also referred to as “shark's teeth,” are markings placed on the roadway 20'-50' before a mid-block crosswalk or crosswalk at an intersection approach without a signal or stop sign.

Advance stop lines are solid white lines that extend across intersection approach lanes. They indicate the point behind which vehicles are required to stop in compliance with a STOP sign or other traffic control device that requires vehicles to stop, like a pedestrian-hybrid beacon.

*Advance stop markings on a neighborhood street, Burlingame*

Crosswalks

Transverse crosswalks consist of two thick lines that demarcate pedestrian right-of-way at intersections and mid-block locations. High-visibility crosswalks are marked with wide bars, drawing additional attention and awareness to the crossing. There are multiple high-visibility crosswalk designs (continental, ladder, etc.).

In school zones, these crosswalks are yellow.

*A high-visibility crosswalk across Northrop Avenue connecting to Swanston Park and Community Center*

### Decorative Crosswalks

Decorative crosswalks can add a placemaking element to the street while still serving a marked crosswalk's primary visibility and awareness objectives. Decorative crosswalks can be themed to reflect the surrounding neighborhood or nearby destinations. Decorative crosswalks must meet specific design parameters to remain compliant with state and federal standards; most importantly, they include transverse markings around any decorative pavement treatment.

### Speed Tables, Raised Crosswalks, and Raised Intersections

Speed tables reduce vehicle speeds by elevating the entire wheelbase of a vehicle (unlike a speed bump that raises each axle individually). Speed tables can include a mid-block raised crosswalk; in these cases, the height of the speed table matches the sidewalk. This treatment makes people walking more visible to approaching motorists and also slows vehicles.

Raised intersections elevate the entire intersection to the sidewalk level, providing improved visibility of people walking and reducing vehicle speeds for all intersection approaches. Raised intersections are typically applied in high-pedestrian areas.

*A raised crosswalk in front of the public library on C Street in Hayward*

## Trail Markings

Paved trails can include striping to demarcate separate areas for people walking and biking. Encouraging spatial separation can reduce conflicts, particularly on crowded trails with high pedestrian usage, and improve the efficiency and consistency of bicycle travel.

*Harold Richey Memorial Bridge  
over the American River*

## PEDESTRIAN-ACTUATED BEACONS

### Rectangular Rapid Flashing Beacon (RRFB)

RRFBs are user-activated flashing lights used at unsignalized intersections or mid-block crossings. These beacons alert motorists to the presence of people in the crosswalk. These are most commonly used on two- to four-lane roadways. RRFBs are not universally accessible and can be difficult for people with visual impairments to use.

*RRFB on California Drive, Burlingame*

**Pedestrian-Hybrid Beacon (PHB)**

A pedestrian hybrid beacon is a signal designed to increase the safety of people walking at unsignalized locations on multilane roadways. Thresholds for installation vary based on the posted speed limit, crossing distance, vehicular volumes, and volumes of pedestrian crossings.

*PHB crossing Grand Avenue, Oakland*

STREET FURNITURE AND UTILITIES

Street Trees

Street trees are an essential component of streetscape design. Trees provide shade, which in hotter climates like Sacramento County, can help encourage physical activity (walking, biking, and rolling) while beautifying and supporting the natural environment. Appropriate tree selection is vital to minimize tree maintenance costs, reduce the impact of roots disrupting sidewalks, and limiting the need for tree trimming to maintain clear sightlines and travel paths.

*A tree-lined segment of Bradshaw Road near Tribeca Drive*

Lighting

Pedestrian-scale lighting improves visibility for both people walking and driving, particularly at intersections. Lighting can be achieved on one light pole (one light for the road and one light for the sidewalk) or separate poles. These lights focus on illuminating the sidewalk, not the roadway. Lighting is also an essential consideration along trails.

*Pedestrian-scale lighting in downtown  
Burlingame*

### Street Furniture/Amenities

Street furniture includes benches, transit shelters, trash cans, newsstands, and other items within the public right-of-way. These items can help to make the walking or rolling experience more comfortable and visually appealing. Transit shelters provide a location out the elements for people to wait, benches provide people walking a place to sit and rest, trash cans can help reduce litter by providing a place for people to throw their trash away, etc.

*A shaded SacRT bus stop with bench on Butano Drive*

## STUDIES

### Stop Signs and Traffic Signals

Stop signs and traffic signals are traffic control devices used to regulate traffic through an intersection. Implementing stop signs and traffic signals is regulated by the CA-MUTCD and requires a technical analysis before implementation.

*Traffic signal at Marconi Avenue/Mission Avenue*

### Complex Intersections and Crossings

While most of the locations examined for the Plan have recommendations, some sites will require additional study and traffic analysis to determine an appropriate alternative that improves safety for all users. Other sites will require coordination with other agencies.

*The intersection of Florin Road and Stockton Boulevard. Source: Google Maps.*

# Bicycle Recommendations

The County developed bicycle recommendations through an iterative process with both County staff and County residents:

- **Step 1:** Incorporated the unbuilt recommendations from the previous Countywide bicycle plan and other planning efforts
- **Step 2:** Revised and added recommendations based on the data-driven needs analysis, future master-planned communities, feasibility, and other factors
- **Step 3:** Reviewed projects to ensure they form a cohesive, connected network that serves the entire County

*A person biking on Garfield Avenue.*

BICYCLE RECOMMENDATIONS

This Plan recommends 108 miles of upgraded bicycle facilities and 1,110 miles of new dedicated bicycle corridors for a total of 1,522 miles of recommendations across unincorporated Sacramento County (**Table 04**). Bicycle recommendations can be seen in **Figure 18**. The full list of bicycle projects can be found in Table C-3 and a mapbook of recommendations in Figure C-2.

Table 04. Existing and Recommended Bicycle Facilities by Class

	Existing (mi)	Proposed (mi)	Total (mi)
Shared-Use Path	63.8	349.1	412.9
Bicycle Lane	224	632.9	856.9
Buffered Bicycle Lane	2	36.1	38.1
Bike Route	14	0	14
Bicycle Boulevard	0	54.2	54.2
Study Corridors	0	145.6	145.6
<b>Total</b>	<b>303.8</b>	<b>1,217.92</b>	<b>1,521.7</b>

**BICYCLE TOOLKIT**

This toolkit provides descriptions and images of each type of recommended bicycle facility. The following section provides details on the infrastructure tools that can create bicycle boulevards.

**Bicycle Facilities**

**Class I Shared-Use Path (trails)**

Dedicated paths for walking and bicycling completely separate from the roadway.

**Class II Bicycle Lane**

Striped lanes for people bicycling.

**Class IIB Buffered Bicycle Lane**

Bicycle lanes that include a striped “buffer” area either between the bicycle lane and the travel lane or between the bicycle lane and parked cars (sometimes in both locations).

**Class IIIB Bicycle Boulevard**

Routes on low-speed, low-volume streets where roadway space is shared with people driving, enhanced with traffic calming features or other treatments to prioritize the comfort of people biking. A toolkit of bicycle boulevard strategies can be found on page 114. Treatments will be specific to each corridor and determined based on local community input and planning and engineering judgment.

*Berkeley, CA.*

*Doyle Street, Emeryville.*

**Class IV Separated Bikeway**

On-street bicycle facilities with a physical barrier between the bicycle lane and motor vehicle lane(s). Barriers can include bollards, curbs, elevation, or parking. These facilities may be bidirectional or unidirectional.

*Rosemead Boulevard, Temple City*

*Walnut Avenue, Fremont*

*Main Street, Los Angeles*

*Polk Street, San Francisco*

### Class IV Study Corridors

The ATP includes over 145 miles of recommended study corridors for Class IV separated bikeways. These corridors are important pieces of the County's overall bicycle network and must include facilities that can provide comfortable, low-stress connectivity through and across multiple neighborhoods. Due to constraints within the built environment (such as limited available roadway width), these corridors require additional study and community engagement opportunities before formal recommendations can be made.

Additional studies will typically identify the roadway changes that would be necessary in order to install a bicycle facility. These changes may include removal of street parking or removal of vehicle travel lanes. In some cases, a road diet (reduction of travel lanes while maintaining a turning lane) may be appropriate. The study process would include a dedicated community engagement process with local stakeholders and community members. The design of these facilities will include the needs of paratransit riders, people with disabilities, and other users with special needs to ensure accessibility and will also consider proposed pedestrian improvements to minimize design conflicts and ensure project feasibility. The study may result in a recommended Class IV separated bikeway design; however, it may also recommend a different bike facility.

**BICYCLE BOULEVARD TOOLKIT<sup>7</sup>**

Unlike other bicycle facilities, bicycle boulevards are unique in that solutions for each corridor can vary based on specific community needs and desires. The toolkit of available treatments allow each street's specific design to fit its needs. Bicycle Boulevards can create an environment where bicycle travel is prioritized in a shared space with cars. Bicycle boulevards have an important role within the proposed bicycle network. These recommendations provide connections within communities to the larger bicycle network and form critical connections to neighborhood destinations like schools, parks, and libraries. The traffic calming effects of bicycle boulevards not only make it more comfortable to bike, but also create more enjoyable environments for people walking. The safety benefits of slower corridors benefit all road users, people biking, walking, and driving. Bike boulevards have also been recommended to

help close gaps in the bicycle network where bike lanes or other dedicated bike facilities are more complex to implement, strengthening the overall network and improving connectivity across the County.

The County will analyze individual corridors to determine which treatments reflect the solutions that will bring about the highest increase in comfort and safety for people bicycling. Selected treatments will also incorporate the needs and desires of nearby residents and stakeholders. Treatments will vary from simple signage and striping only to more advanced intersection redesigns. This Plan does not provide specific treatment recommendations for individual bicycle boulevard corridors.

There are three primary categories of improvements:

- Signs and pavement markings
- Vehicle speed management
- Vehicle volume reduction

<sup>7</sup>Items with an asterisk are included in the approved Neighborhood Traffic Management Program Tool Box.

## Pavement Markings and Signage

### Pavement Markings\*

Bicycle boulevards can have unique pavement markings or sharrows to reinforce that the street is a shared space for people biking and driving. Sharrows may also have green backing to increase driver awareness. Pavement markings can also include edge line or centerline lane striping to delineate roadway space clearly.

*Bicycle boulevard pavement markings in Berkeley*

### Wayfinding Signs

Wayfinding is an essential component of the overall bicycle network but plays an even more significant role on bicycle boulevards. Bicycle boulevards may weave through neighborhoods, increasing the importance of signage to help users easily navigate their trips. Wayfinding can also help raise awareness of the presence of the bicycle boulevard.

*American River Parkway wayfinding sign*

# Vehicle Speed Management

## Reduced Speed Limits

In some areas, especially around schools, reducing the speed limit below 25 mph may be a helpful strategy in slowing cars and making people biking and walking more comfortable in the corridor.

## Neighborhood Traffic Circles\*

Neighborhood traffic circles are an alternative intersection treatment to a signal or stop sign. Traffic circles can regulate the flow of traffic while adding a traffic calming element.

*Neighborhood traffic circle, Burlingame*

### Bulb Outs\*

Bulb outs, also called curb extensions, extend the curb into the street. Curb extensions slow vehicle turning movements by tightening curb radii and forcing cars to make sharper turns. In mid-block settings (with mid-block crosswalks), they also physically and visibly narrow the roadway, encouraging slower speeds. Bulb outs shorten crossing distances for people walking, provide improved visibility of people walking and biking at intersections, and provide additional pedestrian queuing space.

*Curb extension on Palmetto Avenue, Pacifica*

## Chicanes

Chicanes add gentle curves to otherwise straight streets. Adding curves to the road slows car traffic by narrowing the travel lane and requiring cars to follow the curve. The lane adjustments can be created with striping or with offset curb extensions/landscaping.

*Bicycle boulevard with chicane in Berkeley*

### Pinch Points

Pinch points, also known as chokers, narrow available roadway width with two curb extensions. Limiting the available width forces people driving to slow down to navigate the pinch point.

### Speed Humps/Speed Lumps\*

Speed humps (and similar devices) span the roadway's width and encourage cars to slow down. Speed humps have a design speed of 15-20 mph. Speed lumps are similar to speed humps but are designed with slots for emergency vehicles, buses, and other large vehicles. The vertical deflection from speed humps and speed lumps can be uncomfortable for people biking; speed lumps may be a preferred option on bicycle boulevards as people biking can also use the wheel cut.

*Speed humps on Valley Wood Drive*

### Median Islands/Center Island Narrowing\*

Median islands and center island narrowing are variations of roadway medians that provide similar traffic calming benefits but can have different aesthetic and crossing pedestrian crossing effects dependent on their design. Median islands create a pinch point for traffic in the center of the roadway slowing through and turning vehicles and providing shorter crossing distances for people walking when used in tandem with a marked crossing. Medians can also divert through traffic onto other corridors where drivers can move faster. Center island narrowing medians are typically placed at neighborhood entrances and act as gateways into the neighborhood. This provides similar benefits to standard medians and include more placemaking elements like textured pavement and landscaping.

*Median Island on a residential street.*

VEHICLE VOLUME REDUCTION

Right-in/Right-out Diverters

Right-in/right-out diverters can be installed to allow people biking to proceed straight through the intersection while directing motorists to turn right. The island can accommodate bicycle access to the corridor while reducing conflicts and allowing local and emergency vehicles. Left turns from the major street onto the bikeway are typically prohibited, while right turns are still allowed.

*People biking on bicycle boulevard.*

### Full Diverters

Full diverters block all motor vehicles from continuing on a neighborhood bikeway, while people biking can continue unrestricted. Full closures can be constructed to be permeable to emergency vehicles.

*Full diverter on a bicycle boulevard, with emergency vehicle access, in Palo Alto.*

## BICYCLE SUPPORT FACILITIES

### Bicycle Parking

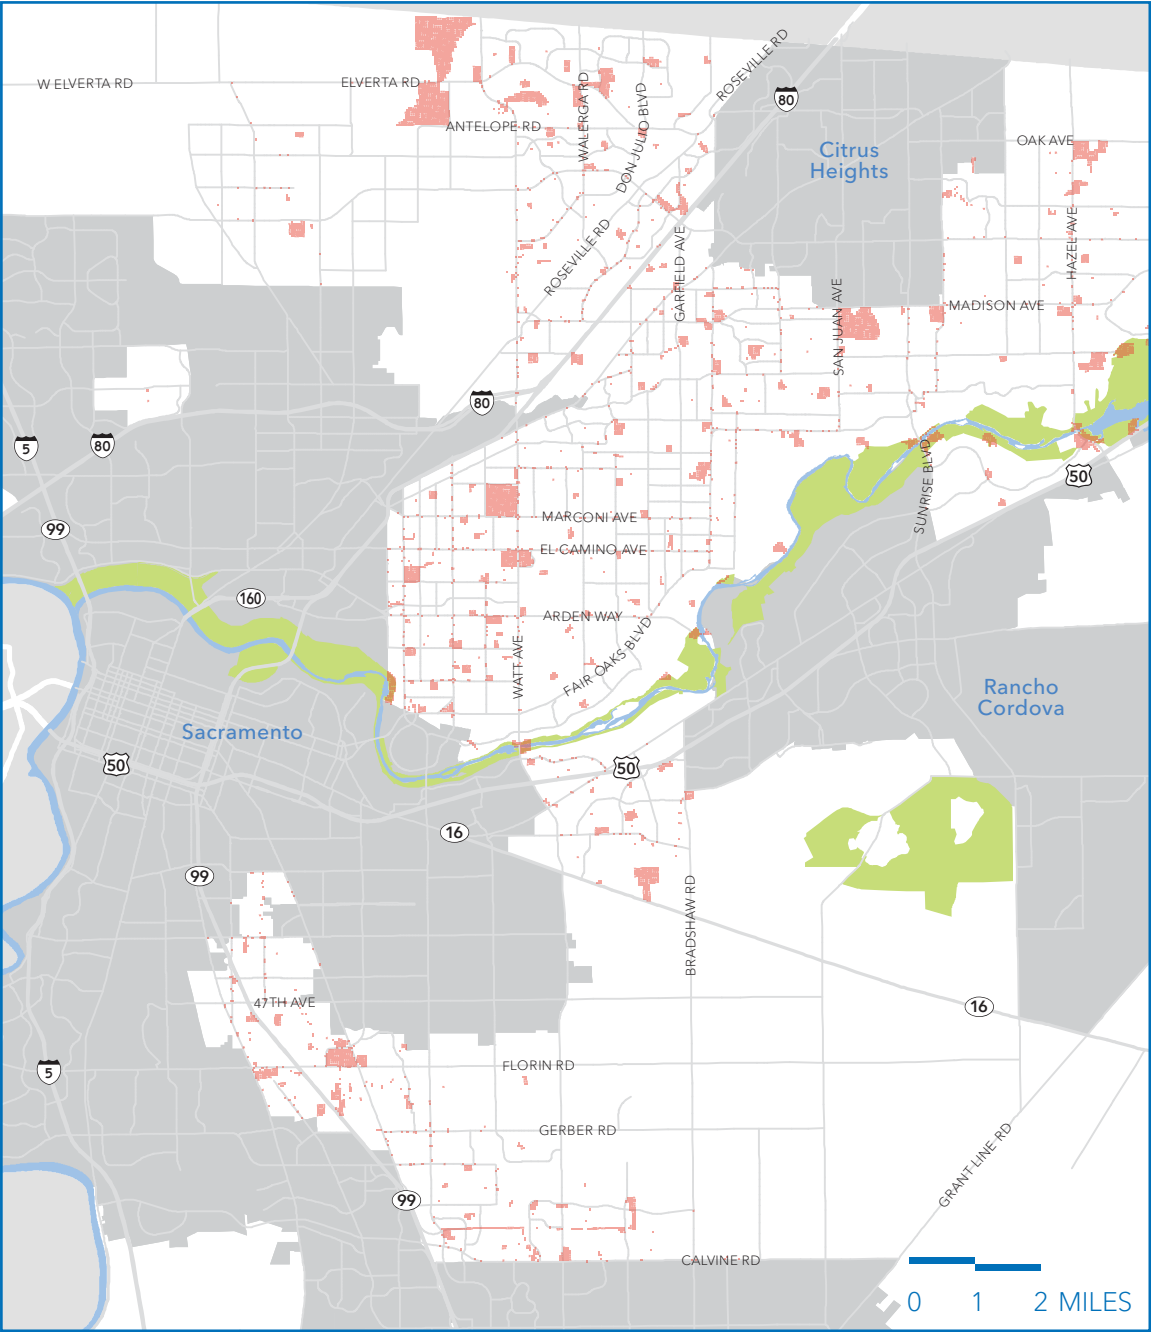

Bicycle parking is typically divided into short-term and long-term parking. Short-term parking is meant to accommodate people biking who park for up to two hours, e.g., shoppers, post office customers, and library patrons. Long-term parking, such as bike lockers, is for riders who park over two hours, e.g., people taking transit, employees, students, and residents. New developments within Sacramento County are required to provide bicycle parking based on the Zoning Code (Section 5.9.9). For already developed areas, the County should coordinate with local businesses, property owners, and open space agencies to install secure bicycle parking near major destinations across the County. The installation of bike racks is subject to environmental, security, right-of-way, maintenance, and property owner factors.

Demand for bicycle parking across already developed areas was analyzed for recommendations by examining land use (zoning), destinations (parks, libraries, etc.), and results from the origin-destination analysis in a weighted model to approximate demand for bicycle parking. Bike parking demand locations are shown in **Figure 19**.

Figure 19. Bike Parking Demand

Focus Map

Key Map

Legend

- BIKE PARKING DEMAND**
- Areas of High Demand
- 
- Unincorporated
  - Incorporated Cities

## Bicycle Racks

Bike racks provide short-term parking and should accommodate visitors, customers, and others expected to depart within two hours. Racks should follow an approved standard, with appropriate placement and weather protections. Racks should also accommodate a variety of bicycle types.

*A group of U-rack bicycle racks in Rancho Cordova*

*Decorative "peace sign" bike racks located off of Winding Way*

### Bicycle Corrals

On-street bike corrals (also known as on-street bicycle parking) consist of bicycle racks grouped in a common area on the street, typically in a former car parking space. Bicycle corrals are reserved exclusively for bicycles and provide a relatively inexpensive solution for high-capacity bicycle parking. Each motor vehicle parking space could be replaced with approximately 6-10 bicycle parking spaces.

*In-street bicycle corral, Los Angeles*

## Bicycle Lockers

Bike lockers offer a secure, long-term parking area for bicycles. They typically provide a semi-enclosed space that provides a higher level of security than standard bike racks. They are usually accessible via key-card, combination lock, or key. Increased security protections enable biking to be a practical transportation option for those whose most significant concern is theft and vulnerability.

Locations of current bike lockers at SacRT light rail stations are shown below:

- |                          |                                |                                 |              |                  |                             |
|--------------------------|--------------------------------|---------------------------------|--------------|------------------|-----------------------------|
| • Marconi/Arcade         | • 23rd Street                  |                                 |              |                  |                             |
| • Mather Field/<br>Mills | • Hazel                        | • College Greens                | • Starfire   | • Butterfield    | • Cosumnes<br>River College |
|                          | • 59th Street                  | • Historic Folsom <sup>10</sup> | • Meadowview | • Center Parkway |                             |
| • 13th Street            | • Iron Point                   | • Watt/Manlove                  | • Tiber      |                  |                             |
| • Sunrise                | • Power Inn Glenn <sup>9</sup> | • Florin                        | • Franklin   |                  |                             |

<sup>9</sup>For more information on Sacramento Regional Transit's bike locker program or to request a lease agreement, please send an email to Robert Hendrix at rhendrix@sacrt.com or call (916) 321-BUSS (2877).

<sup>10</sup>For information on how to lease a bike locker at Iron Point, Glenn or Historic Folsom, call the City of Folsom at 916-355-7285. In addition, many light rail stations have ribbon-style bike racks available for no charge.

*Bike lockers at a transit station*

Bicycle lockers are also available at other locations across Sacramento County.

## End-of-Trip Facilities

Besides providing secure bicycle parking for people biking, jurisdictions, businesses, and employers should also offer end-of-trip facilities. End-of-trip facilities include changing rooms, clothes lockers, restrooms, and showers. These promote and facilitate active trips (especially commute trips) by making bicycling (and walking) commutes more practical. Multiple studies have found that robust end-of-trip facilities can encourage additional walking and biking commuting trips by removing obstacles for active transportation users, such as a desire not to show up to work sweaty or knowing they have a secure place to store their belongings. In addition to making walking and biking more attractive, these studies also touted many workplace performance benefits from employees who used active transportation to get to work, such as arriving to work with better focus, having higher productivity, and increased happiness.<sup>11</sup>

<sup>11</sup>"End-of-trip facilities for bicycle riders." Queensland Transport. Queensland Government. (2006). [https://bikeleague.org/sites/default/files/BFB\\_Queensland\\_End\\_of\\_trip\\_facilities\\_for\\_bicycle\\_riders.pdf](https://bikeleague.org/sites/default/files/BFB_Queensland_End_of_trip_facilities_for_bicycle_riders.pdf)

## Bicycle Detection at Signalized Intersections

Bicycle detection notifies the traffic signal controller that a person bicycling is waiting to cross the intersection. Bicycle detection provides similar functionality to pedestrian crossing buttons or vehicle loop detectors. There are various methods of detecting bicycles at intersections, but the most common methods are bicycle loop detectors and cameras. Bicycle detection at signals can provide many benefits to people biking including a reduction in travel delay, improving the safety and convenience of bicycling, discouraging red-light running by people bicycling, and prolonging the green phase to allow people bicycling to clear an intersection.<sup>11</sup>

Item 6 - Draft Active Transportation Plan

# Additional Infrastructure Toolkits and Information

## WAYFINDING

### Navigational Elements

The fundamental family of signs that provide people walking and biking with navigational information consists of decision, confirmation, and turn signs, described in **Figure 20** and **Table 05**.

**Figure 21** provides typical locations of signs. Decision signs (D) are located before an intersection of two routes. Turn signs (T) are found before turns. Confirmation signs (C) are located after the turning movement and periodically along routes for reassurance. Guidance on bicycle wayfinding signage can be found in the California Manual on Uniform Traffic Control Devices.

### Signage Technical Guidance

A variety of standards and guidelines influence both the designs and placement of wayfinding elements in Sacramento County. The Manual of Traffic Control Devices (MUTCD) provides standards and guidelines for the design, size, and content of wayfinding signs. However, many

jurisdictions have implemented unique signs to enhance visibility while reinforcing local identity.

### Bicycle Guide Signs

Both on-street and off-street bicycle facilities are required to follow the standards within the MUTCD. The State of California has adopted specific state standards for all traffic control devices called the CA MUTCD, which supersedes the MUTCD:

- D11-1: Bicycle Route Guide Sign
- D1-1b: Destination Supplemental Sign
- M7-1 through M7-7 Directional Arrow Supplemental Sign

Sacramento County Department of Regional Parks has an adopted American River Parkway Signage Manual which should also be referenced when considering trail or trailhead signage in other areas of the County. The combination of standard signs

with modifications allows for consistent signage throughout Sacramento County while branding the network.

### Community Wayfinding

Community wayfinding signs allow for an expression of community identity, reflect local values and character, and provide more information. California has

not yet adopted MUTCD community wayfinding standards, but many communities use these.

### Other Wayfinding Elements

In addition to the core elements, several other wayfinding elements should be considered:

- Distance and time**  
 Adding distance in familiar units can be a helpful encouragement tool for bicycling and walking. Some jurisdictions include travel time.
- Street name sign blades and sign toppers**  
 Some jurisdictions have enhanced street name sign blades to recognize bikeways and major pedestrian routes
- Pavement markings**  
 Directional pavement markings indicate confirmation of bicycle or pedestrian presence on a designated route and indicate turn locations. Pavement markings can often be more visible and can help supplement or reinforce signage

[https://localwiki.org/davis/Bike\\_Loop/\\_files/Davis\\_Bike\\_Loop.JPG/\\_info/](https://localwiki.org/davis/Bike_Loop/_files/Davis_Bike_Loop.JPG/_info/)

Table 05. Wayfinding Sign Information

Decision Sign	Confirmation Sign	Turn Sign
<ul style="list-style-type: none"><li>• Clarify route options when more than one is available</li><li>• Typically include a system brand</li><li>• Up to 3 destinations</li><li>• Distance in time or miles (based on 10 mph or 6 minutes per mile)</li><li>• FHWA standard size for three destinations is 18" H x 30" W</li><li>• Municipalities can modify, often 24" W x 30" or 36" H, and place a bicycle symbol at the top</li><li>• Generally, 6" of vertical space per destination</li><li>• Sign width not standardized by the CA MUTCD</li></ul>	<ul style="list-style-type: none"><li>• Placed after turn movement or intersection to reassure that they are on the correct route</li><li>• Standard D11-1 series signs, system brand mark, and route or pathway name may be included</li><li>• The minimum size of 24" W x 18" H should be used for bike route signs, both on and off-street</li></ul>	<ul style="list-style-type: none"><li>• Clarify a specific route at changes in direction</li><li>• Used when only one route option is available</li><li>• Standard D1-1 series sign: system brand mark, route or pathway name, and/or a directional arrow may be included</li><li>• A minimum of 6" should be used for arrow plaque; the width may vary with destination length</li><li>• Standard turn arrows (M5 and M6 series) may be used to clarify movements</li></ul>

Wayfinding Sign Note: Vertical clearance beneath signs shall conform to the CA MUTCD.

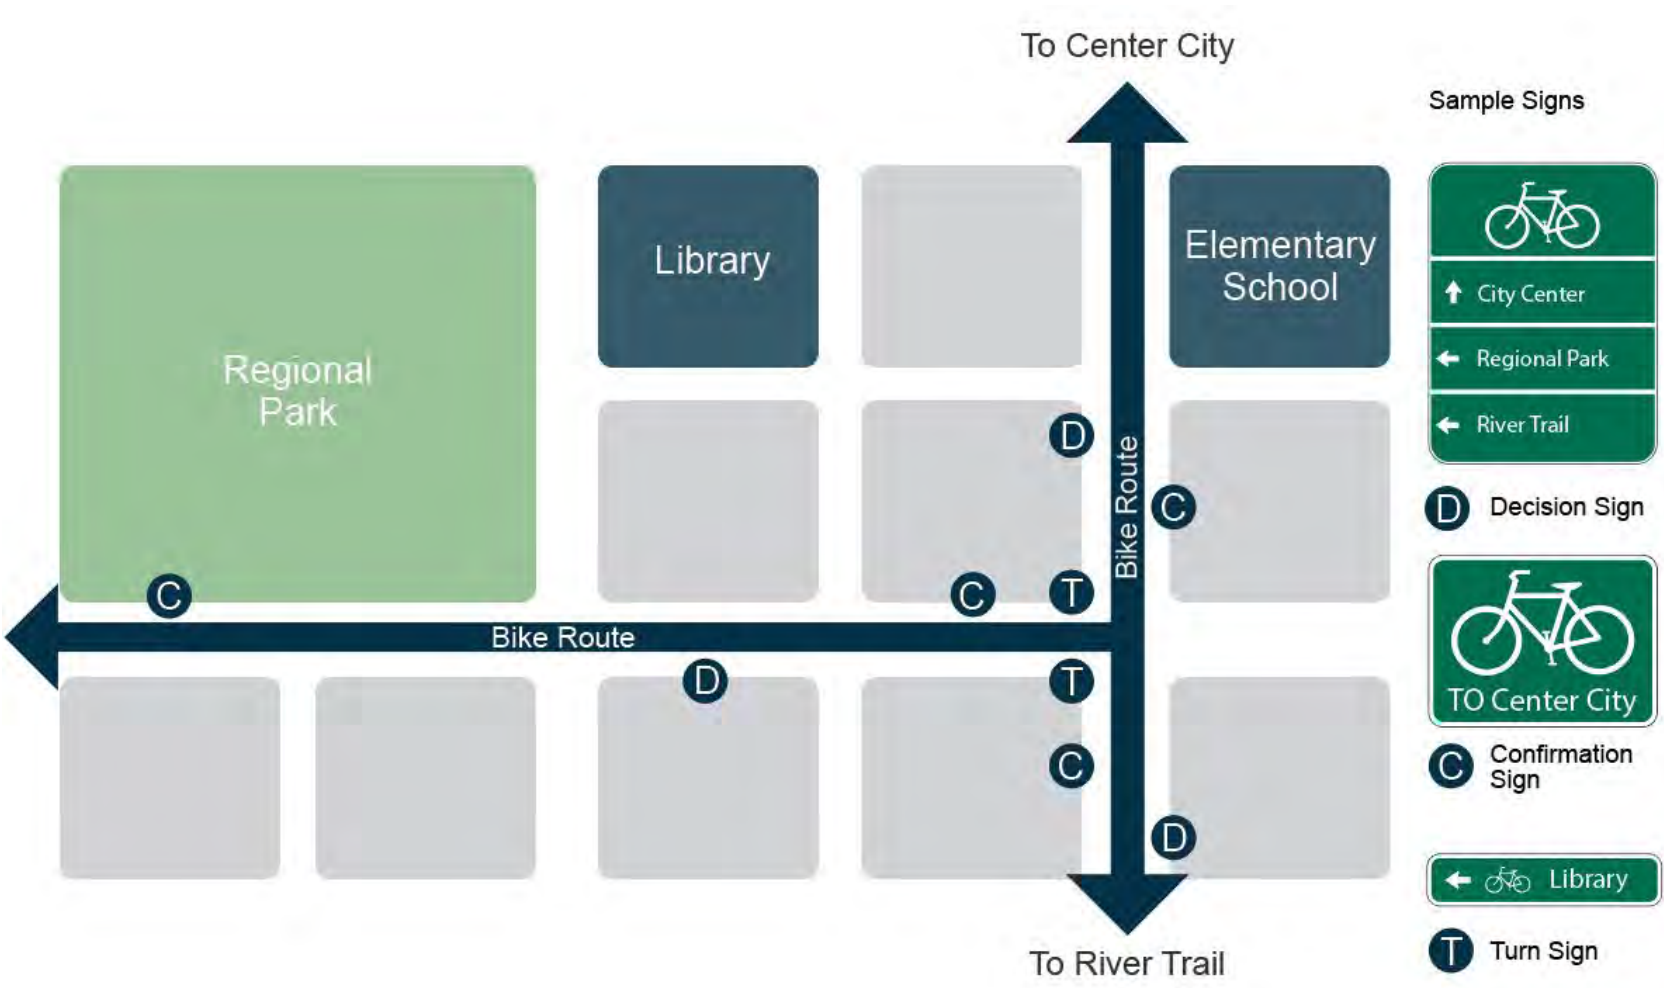

# Wayfinding

Figure 20. Wayfinding Sign Types

Figure 21. Wayfinding Sign Placement

# Green Infrastructure

Active transportation improvements often provide additional opportunities to allow streets to function as more than just public space and mobility corridors—roads can become a vital, functional component of the natural ecosystem. Green infrastructure is a catchall term that describes sustainable stormwater management practices and infrastructure. As urban landscapes have paved and built over green space, they have disrupted hydrological cycles and have required stormwater infrastructure to manage stormwater runoff and protect water quality. Green stormwater infrastructure can reintroduce ecological functions back into the environment. Through strategies including biofiltration planters, bioretention swales, trees, and permeable pavement surfaces, more water can return to the ground and natural systems while reducing strain on existing water systems.

These stormwater strategies can be implemented in various transportation facilities, including sidewalks and trails, planted buffers, curb extensions, medians, and landscaping projects.

*An example of a planted sidewalk buffer that could be designed with green infrastructure components*

# School Zone Speed Limits

Through Assembly Bill 321, local governments can extend school zones up to 1,000 feet and reduce speed limits within 500 feet of a school site to 15 mph in residential neighborhoods or on highways with speed limits of 30 mph or less when children are present.

At 15 mph, more than 90 percent of people walking are likely to survive a crash with only minor injuries. As speeds increase, however, crash severity increases dramatically. At 30 mph, most collisions result in severe pedestrian injuries, and nearly half may be fatal. At 40 mph, 90 percent of people walking will die in a crash. Reducing speeds even slightly can have a profound effect on safety for people walking and bicycling to school.

This Plan recommends the County consider this change around eligible schools. AB 321 requires engineering and traffic surveys to indicate that the existing speed limit is not appropriate.

*A family walking to Pacific Elementary*

# Chapter 5: Program Recommendations

Source: Jibe / North Natomas

# Educational Programs

This chapter describes recommended bicycle- and pedestrian-related programs for Sacramento County. Programs are organized by the following categories: education, encouragement, support, safe routes to school, evaluation, and infrastructure. All program implementation is dependent on funding.

## ADULT BICYCLE EDUCATION

These courses are typically based on a League of American Bicyclists curriculum that focuses on how people bicycling should behave to be safer, more predictable, and more confident riding on streets both with and without dedicated bicycle facilities. Class topics may also include bicycle maintenance, riding at night/in bad weather, and other essential topics. These programs are usually maintained through a partnership between the jurisdiction and local advocacy groups.

## TRAFFIC TICKET DIVERSION PROGRAM

Bicycle traffic ticket diversion programs are coordinated efforts between local law enforcement, traffic court, and bicycle advocacy organizations (that have education programs). People bicycling who have been issued a traffic ticket will have the option to attend a bicycle traffic safety class in lieu of paying the ticket fine. The safety

*An instructor leading a bicycle education class.*  
Source: Jibe

Jibe / North Natomas

classes would also be available to the general public. Santa Cruz County has implemented this as their “Bike Traffic School Program.”

**DRIVER EDUCATION PROGRAMS/CAMPAIGNS**

Educational campaigns focusing on driver education is another tool that can work towards changing behavior and increasing awareness. The California Office of Traffic Safety (OTS) regularly has grant opportunities to fund educational campaigns that support pedestrian, bicycle, and roadway safety. These programs support OTS's goals of reducing injuries and fatalities of people walking and bicycling. Programs attempt to raise awareness about traffic rules, rights, and responsibilities for people driving, walking, or biking. Example campaigns that other jurisdictions have ran in the past include: “Pedestrians Don’t Have Armor” – CA OTS, “My Mom/Dad Works Here” – universal, and continuously updating a sign that shows driver yielding compliance at the intersection – St. Paul.

**DRIVER AWARENESS**

Driver awareness programs work hand-in-hand with driver education programs. Awareness programs help people driving become more familiar with local infrastructure and gain a better understanding of roadway signs, roadway striping patterns, and expected bicycle behavior. Awareness programs are especially important as new or unfamiliar infrastructure elements are introduced to communities. The programs can help communities become more comfortable with the facilities and understand their intended use.

*Learning to ride a bicycle at Prospect Hill Park in Gold River*

# Encouragement Programs

## SOCIAL WALKING AND BIKING

People who are uncomfortable bicycling or walking alone or unfamiliar with the best routes to use will benefit from having a group to show them the way. Outings can also be informal education opportunities to remind participants about safe walking and bicycling behavior. Activities should target different modes and user groups (kids, seniors, people with mobility impairments, etc.). Youth centers, senior centers, and community centers also can be partners in organizing and hosting these activities.

## BICYCLE FRIENDLY BUSINESS PROGRAM

Bicycle Friendly Business programs recognize businesses that make it easy and convenient for employees and customers to arrive by bicycle. These programs ask businesses to implement different strategies to accommodate the needs of customers and employees. Some of these strategies include providing bicycle parking (or being close to publicly available parking),

providing discounts to people biking, supporting and encouraging employees to bike to work, or participating and sponsoring special biking-focused events. The County could help promote these businesses, improve/provide nearby infrastructure, and create a consistent "Sacramento County Bicycle Friendly Business" logo or identity.

## BICYCLE FRIENDLY UNIVERSITY PROGRAM

The League of American Bicyclists' Bicycle Friendly University program recognizes institutions of higher education for promoting and providing a more bikeable campus for students, staff, and visitors. College and university campuses are unique environments that are typically great environments for bicycling. In addition to building bicycle-friendly infrastructure on campus, institutions can incorporate bike share programs, bike co-ops, bike clubs, educational classes, and implement policies and programs that promote bicycling as a preferred means of transportation. The County can partner

with local institutions, such as American River College and Consumnes River College, to help them reach Bicycle Friendly University-related goals.

## BICYCLE FRIENDLY COMMUNITY PROGRAM

The Bicycle Friendly Community (BFC) program acts as a blueprint to guide communities striving to improve bicycling conditions. Within the program, there are ten building blocks that make up the BFC report card. These metrics include statistics on bicycle facilities, bicycle education in schools, jurisdictional spending on bicycling, jurisdictional laws and policies, bike plan status, and others. Based on the results of the report card, jurisdictions are assigned a status: bronze, silver, gold, platinum, and diamond. Formally tracking these metrics, and re-applying to the program at regular intervals, helps communities track their progress improving bicycling facilities, programs, and policies over time. Communities can use this tool to work with SacDOT and other County

# Support Programs

staff to move towards implementing the ATP and other community goals with quantifiable metrics.

## ADOPT-A-TRAIL PROGRAM AND TRAIL CLEAN UP PROGRAMS

The Adopt-A-Trail Program would partner with local groups and associations to clean and maintain trail facilities within Sacramento County. When groups adopt a trail, they agree to organize cleanup efforts to help maintain the trail periodically. A sign or other indication acknowledging the support of the outside organization can be installed along the trail. The County could also provide trash bags and gloves and set up a loaner tools/equipment system to make it easier for more groups to participate.

Trail users can also help keep Sacramento County trails clean by reporting trash and obstacles to the County using 311. The County can also work with local groups to help organize regularly scheduled clean-up days on trails across the County.

## EARN A BIKE/BIKE BUILD PROGRAM

The County could partner with local community-based organizations and advocacy groups to create a program where community members learn and practice bicycle maintenance skills and, over time, earn a bicycle they built or repaired.

## BIKE MATCH PROGRAM

A Bike Match program could match donated bikes in good condition to essential workers or others who need a bicycle for transportation. This program could coordinate pick-up/drop-off directly between the donator and recipient, both of whom sign a liability waiver relieving the sponsoring organization of any responsibility for the bicycle's quality or condition.

## COMMERCIAL CARGO BIKE SUPPORT PROGRAM AND INFRASTRUCTURE

Cargo bikes have shown great promise as an alternative to some truck and van commercial and residential deliveries. Due to limited available curb loading space, delivery vehicles frequently stop in bike lanes and vehicle lanes to load/unload their goods. Cargo bikes can reduce these conflicts and deliver packages more efficiently; on average, they deliver goods faster and with significantly fewer emissions than traditional methods.<sup>12</sup>

To develop a Cargo Bicycle Program, SacDOT would partner with interested logistics/delivery companies to:

- Determine the number of bikes that can be used and the specifications of those bikes (consistent with the CA Vehicle Code)

<sup>12</sup><https://static1.squarespace.com/static/5d30896202a18c0001b49180/t/61091edc3acfa2f4af7d97f/1627987694676/The+Promise+of+Low-Carbon+Freight.pdf>

- Develop policies for where cargo bikes can/cannot unload and create cargo-bike specific hubs (for parking, loading, breaks, etc.) in areas with high demand or loading area constraints
- Decide on appropriate education/training for all cargo bike delivery staff
- Establish enforcement policies and guidelines (working with local law enforcement or DOT staff)
- Create a data-sharing agreement

SacDOT should coordinate improvements to the bicycle network with the creation/future expansions of the cargo bike program to maximize its effectiveness and improve the safety of the workers. Jurisdictions within the United States that are currently piloting cargo bike programs include New York City, Fort Lauderdale, Pittsburgh, Seattle, and Portland.

## BIKEWAY MAPS AND SAFETY INFORMATION

As Sacramento County's bicycle network continues to grow, it will be essential to maintain an up-to-date map of current facilities. This map should be made available online and also in print form (refreshed periodically). Maps can be distributed at bike shops, libraries, and other destinations. Both print and online resources are opportunities to share safety tips and additional topical information.

## BICYCLE REPAIR

Partner with local advocacy groups to offer bicycle repair classes and other resources for the public. Partner with local advocacy groups or bike shops to host pop-up bike repair clinics in locations where there are no bicycle shops nearby. These pop-up events should be targeted in EJ Communities and other disadvantaged areas to help reach the most vulnerable populations.

*A bike being repaired at a pop-up workshop*

# Safe Routes to Schools Programs

(working with local partners and school districts)

## EDUCATION

### Bike Education

Bicycle education ranges from learning to ride to learning the rules of the road and on-bike drills practice during a 'bike rodeo.' These are typically held during PE classes or after school, depending on the arrangement with the school. Typically, bicycle education classes or rodeos are organized by grade level, with an age-appropriate program for elementary, middle, and high school students.

### Pedestrian Education

Pedestrian rodeos teach students, typically 1st and 2nd grade, how to walk safely, including crossing intersections, walking where there is no sidewalk, and being aware of driveways.

*Safe Routes to School-focused bicycle education*

### Transit Education

SacDOT can partner with SacRT to develop a simple education curriculum to teach middle and high school students the basics of reading transit maps and how to use transit throughout Sacramento County. It should also include discussions of any available youth discounts and other fare programs.

Education programs can also encourage student creativity and task them with developing their own educational or promotional-related materials.

### Parent Guardian Education

Including parent/guardian-focused educational activities through Safe Routes to Schools programming increases community safety and can help promote a culture of walking and biking to school. Parent/guardian education can take many forms including flyers, a recurring section in a school newsletter, short videos, sessions during back-to-school night, school events, PTA meetings, and other events or meetings. Topics can include: driving tips, school drop-off/pick-up procedures, preferred walking/biking routes, walking and biking safety tips, and others. This programming should reinforce the educational materials that their students are receiving.

*Students learning how to safely cross the street*

## ENCOURAGEMENT

### Crossing Guards

Crossing guards are critical community assets that help make it safer and more comfortable for students and families to cross the street. Crossing guards are stationed at intersections around schools to help control traffic and improve safety in the area. Crossing guards are typically present around morning drop-off and afternoon dismissal times. A program should work with community members, schools, and school districts to determine appropriate locations and schedules. Crossing guard locations should be regularly evaluated to assign them to areas with the most need.

*A crossing guard helping stopping traffic for students in Santa Clarita*

## Walking School Buses and Bike Trains

Walking School Buses and Bike Trains are organized groups of students walking or biking to school under the supervision of a guardian/adult volunteer. These groups follow predetermined routes and can operate occasionally or daily depending on interest from families. The County can support this program by offering route mapping, promotional support, equipment (i.e., a high-visibility vest for the adult chaperone), and other technical assistance.

*A walking school bus in Alameda County*

**Safe Passages Program**

Safe Passages programs station adult ambassadors within communities to build relationships with youth and provide them with the tools they need to stay calm and appropriately react to situations they encounter while walking and rolling. Safe Passages programs are typically run using prevention-based approaches, including supervision, community building, and de-escalation. Safe Passages programs generally are intensive programs that include a mentorship aspect between adult ambassadors and youth.

**Corner Greeters**

A Corner Greeter Program is similar to a Safe Passages Program but is less structured. In a Safe Routes to School context, corner greeters help build community and place additional eyes on the street when kids walk to and from school. Corner greeters can also take on more festive and placemaking roles by setting up pop-up-style events at highly-traveled locations to engage passersby and help build community.

Community groups may sponsor Corner Greeter programs and provide volunteers to help implement events.

**Suggested Route Maps**

Suggested Walking and Biking Routes to School Maps can help parents overcome traffic-related fears and lack of knowledge of family-friendly routes to school. These maps can show stop signs, traffic signals, crosswalks, paths, crossing guard locations and provide additional safety tips. These maps can also promote park-and-walk and locations, walking school buses, and bike trains.

**Adopt-A-Bike**

Adopt-A-Bike combines a bicycle donation program with educational components that help teach students how to work on and maintain their new bikes. Adopt-A-Bike can also be structured as “Earn-A-Bike,” where youth learn and practice bicycle maintenance skills and, over time, earn a bicycle they built or repaired.

EVALUATION PROGRAMS

Annual Bike/Ped Counts

Conducting regular walking and bicycle counts is essential to understand how travel behavior is changing across the County. The counting methodology should be consistent with other regional metrics. The County should consider selecting multiple locations across unincorporated County and count those same locations annually. These locations should include a variety of surrounding uses, densities, and contexts. If the County chooses to count the same places, it can consider installing permanent counters.

Before and after project counts are another excellent method to help judge the impacts of active transportation projects and help support future projects.

Student Travel Tallies

Conduct annual travel tallies at participating schools to understand how mode share is changing over time. Consider making this data easily accessible to the public by posting a summary to a central Safe Routes to School website.

Parent Surveys

Parent surveys can provide valuable insights into why students are traveling the way they are. Implement parent surveys once every two or three years to supplement travel tally data and learn additional insights about parents’ concerns and perceptions of walking and bicycling.

Program Evaluation

An annual “active transportation report card” assesses the County’s progress towards Plan goals and objectives and project and program implementation. SacDOT, in coordination with the Sacramento County Bicycle Advisory Committee (SacBAC), should determine specific monitoring metrics. Commonly used metrics include: mode share, climate goals, project implementation/ network stats, and program-related stats. The report card should be presented annually to the SacBAC.

# Infrastructure Programs

## Bike Rack Installation Programs

Bike rack programs coordinate and streamline bike rack installations. This staff-managed program would develop guidelines for installation (only near commercial areas, parks, libraries, etc.) and process requests from residents and businesses. The County can install racks on sidewalks within County right-of-way. The County should establish/refresh bike rack standards and ensure that the racks selected for this program meet strong safety and security thresholds.

## Bike share and Micromobility

Bike share and micromobility (scooters, e-bikes, and other personal mobility devices) are becoming an increasingly important component of the transportation environment. These mobility devices can be personally owned and rented as part of shared mobility systems. Shared micromobility systems can be operated under many different operating models and sizes to fit the specific needs and goals of the County and the community. Implementation of these systems creates additional flexible, lower-cost transportation options within the service area. Powered micromobility devices expand the suite of alternative transportation modes that can reduce automobile dependency. They can be more readily combined with transit and human-powered transportation trips to expand transportation options.

There are six principles that should help guide micromobility systems planning and infrastructure design:

**1) Advance mobility justice:** Bike share and micromobility can provide users with healthy, safe and affordable transportation options that provide access to economic opportunities. Powered mobility devices can further enhance this effect. Micromobility and bike share systems should be implemented to equitably and successfully serve EJ Communities and areas with concentrations of walking and bicycling.

**2) Design for safety:** Designing for safety requires identifying and prioritizing the most vulnerable roadway and trail users first, then accounting for design features that will improve safety for all users.

**3) Complement the natural environment:** Shared-use paths and green infrastructure components can complement the natural environment while preserving the user experience.

**4) Prioritize the human experience:**

Micromobility and bike share specific infrastructure should strive for a consistent user experience across the County. Implementing these items should be done with a “do no harm” approach to incorporating these modes along existing active and shared modes of transportation.

**5) Expand user amenities:** With powered micromobility and other new and emerging modes, public charging infrastructure offers convenience while also reducing risk of “stranded” users or inoperable devices/vehicles that have lost power. Such investments can also provide public charging for motorized wheelchairs or personal phones.

**6) Design for the future:** New mobility and bike share staff should track trends, identify shifts in user groups, and conduct research when possible (surveys, counts, or data from vendors). Understanding these trends can help the County prepare for future investments in these areas.

Micromobility systems should include accessible vehicles within their fleets. The County and system operator should conduct targeted outreach to the appropriate stakeholder groups to better define and plan for their specific needs.

Through this program, the County should also provide dedicated scooter/ bike share parking locations. These locations should be found throughout the service area of the program and should be designed and located to minimize disruptions to other people walking, biking, and rolling.

In addition to micromobility vehicle and program design, the development of successful bike share and micromobility systems is also dependent on construction and maintenance of safe and comfortable travel facilities. Providing low-stress on- and off-street travel facilities will make traveling by bike or scooter more attractive, which

will help convert trips from single occupancy vehicles and improve access to transit services for longer journeys. Comfortable on-street or trail facilities can also reduce instances of users riding on the sidewalk.

The County may consider pursuing a Bike Share or Micromobility Feasibility Study to determine where and how to implement a micromobility program in conjunction with feedback from the community.

Mobility Hubs

Mobility hubs provide an integrated suite of mobility services, amenities, and technologies to enable seamless multi-modal trips. Mobility hubs most often prioritize transit connections, but not all mobility hubs are directly co-located with transit. In practice, mobility hubs develop as a collection of elements that make it easier to access the shared and active mobility network. These elements can be mixed and matched to create a customized, hyper-local transportation terminal. Mobility hubs are typically designed with four primary objectives:

- 1) Increase access and convenience of multiple modes of transportation while reducing single occupancy vehicle trips
- 2) Create a more seamless, desirable experience for transit-linked trips
- 3) Manage private mobility services to align with local goals
- 4) Support other County/ community goals including urban

design improvements, community development, and economic development

Mobility hubs typically include elements from these four areas:

- Transit and trip making services (ticket vending, pick up/drop off areas, transit stops)
- Parking and charging stations for micromobility and shared mobility services (can also include car share and freight/commercial cargo loading/unloading areas)
- Safe, prioritized access for people walking, rolling, or bicycling
- Amenities (community space, retail opportunities, activated furnishing and walking/biking support infrastructure)

Wayfinding

Wayfinding signs provide important destination, distance, and navigation information to roadway users. Specific wayfinding signs designed for people walking and bicycling should be implemented at key locations across the County to support active transportation further.

Tactical Urbanism and Slow Streets/ School Streets

Tactical Urbanism/Demonstration Projects are short-term, temporary installations of infrastructure that allow the jurisdiction and community to “test out” different roadway configurations/ infrastructure treatments before detailed design and permanent construction. Demonstration projects can last anywhere from one day to several months, depending on the project’s objectives and data collection/ observation needs.

These projects are also a great way to add a placemaking element by adding public art, decorative crosswalks, or other community-inspired features.

Slow Streets and School Streets are streets with either limited or closed access to motor vehicle traffic to provide more space and safety for people walking and biking. These streets allow all modes to mix within the roadway area. Slow Streets that front schools can be considered School Streets and designed with school- and student-specific treatments that account for arrival and dismissal travel needs.

### Neighborhood Traffic Management Program

SacDOT's Neighborhood Traffic Management Program (NTMP) strives to improve safety and the quality of life for residents by reducing speeds and reckless driving on neighborhood streets. The NTMP provides a toolbox of solutions that County staff can consider when working with communities to improve neighborhood safety. Improvements are implemented through a five-step process: 1) plan initiation/application, 2) data collection and analysis, 3) funding approval, 4) plan development and support, and 5) implementation. More information on the NTMP can be found on SacDOT's website.

### Quick Build

Some infrastructure components like curb extensions and medians can be implemented faster in the short-to medium-term using quick build strategies and materials. Materials typically include paint, thermoplastic, and bollards/delineators (or other sturdy but removable materials). These improvements share many of the safety benefits as their permanent counterparts. They can be implemented faster and cheaper, allowing the County to be more responsive to safety concerns while still planning for long-term funding and implementation.

# Chapter 6: Implementation and Funding

This chapter describes the process for evaluating and funding project recommendations to help Sacramento County prioritize projects. The County incorporated community feedback and support for projects throughout the prioritization process.

*A cyclist rides on a trail*

# Infrastructure Project Prioritization Methodology

The project prioritization process includes the following steps:

- **Identification of categories:**  
Development of prioritization categories that align with the identified goals for the active transportation plan
- **Weighting of Criteria:**  
Establish the weighting of each prioritization metric
- **Project Scoring and Calibration:**  
Score the projects using the identified metrics and weights. Recalibrate the weighting, if necessary, to ensure project weighting accurately reflects the stated goals

# Prioritization Categories

Prioritization categories respond to a range of local needs. See **Figure 22** below for the categories. Using the defined categories and weights, projects received a score between 0 (low value) and 5 (high value). For full details on the prioritization methodology, please see Appendix D.

Figure 22. Prioritization Methodology Weighting

# Prioritization Results

## PEDESTRIAN PROJECTS

Prioritized pedestrian projects include 66 pedestrian spot improvements and 32 miles of sidewalk gap closures. Priority pedestrian spot improvements scored 3.75 or better of 5 points. Prioritized sidewalk improvements scored 3.5 or better. The Plan also prioritized locations that provide essential connections and access options for Sacramento County residents. Closing these intersection barriers or “gaps” within the network provides important connectivity, access, and trip choice benefits.

All prioritized spot location projects are on either a bicycle or pedestrian high-injury network (HIN) corridor. These projects will provide safety enhancements across the County. These intersection improvements will provide safety enhancements to all roadway users: people walking, biking, rolling, and driving. Many of the spot improvements overlap with priority sidewalk gap locations, providing more

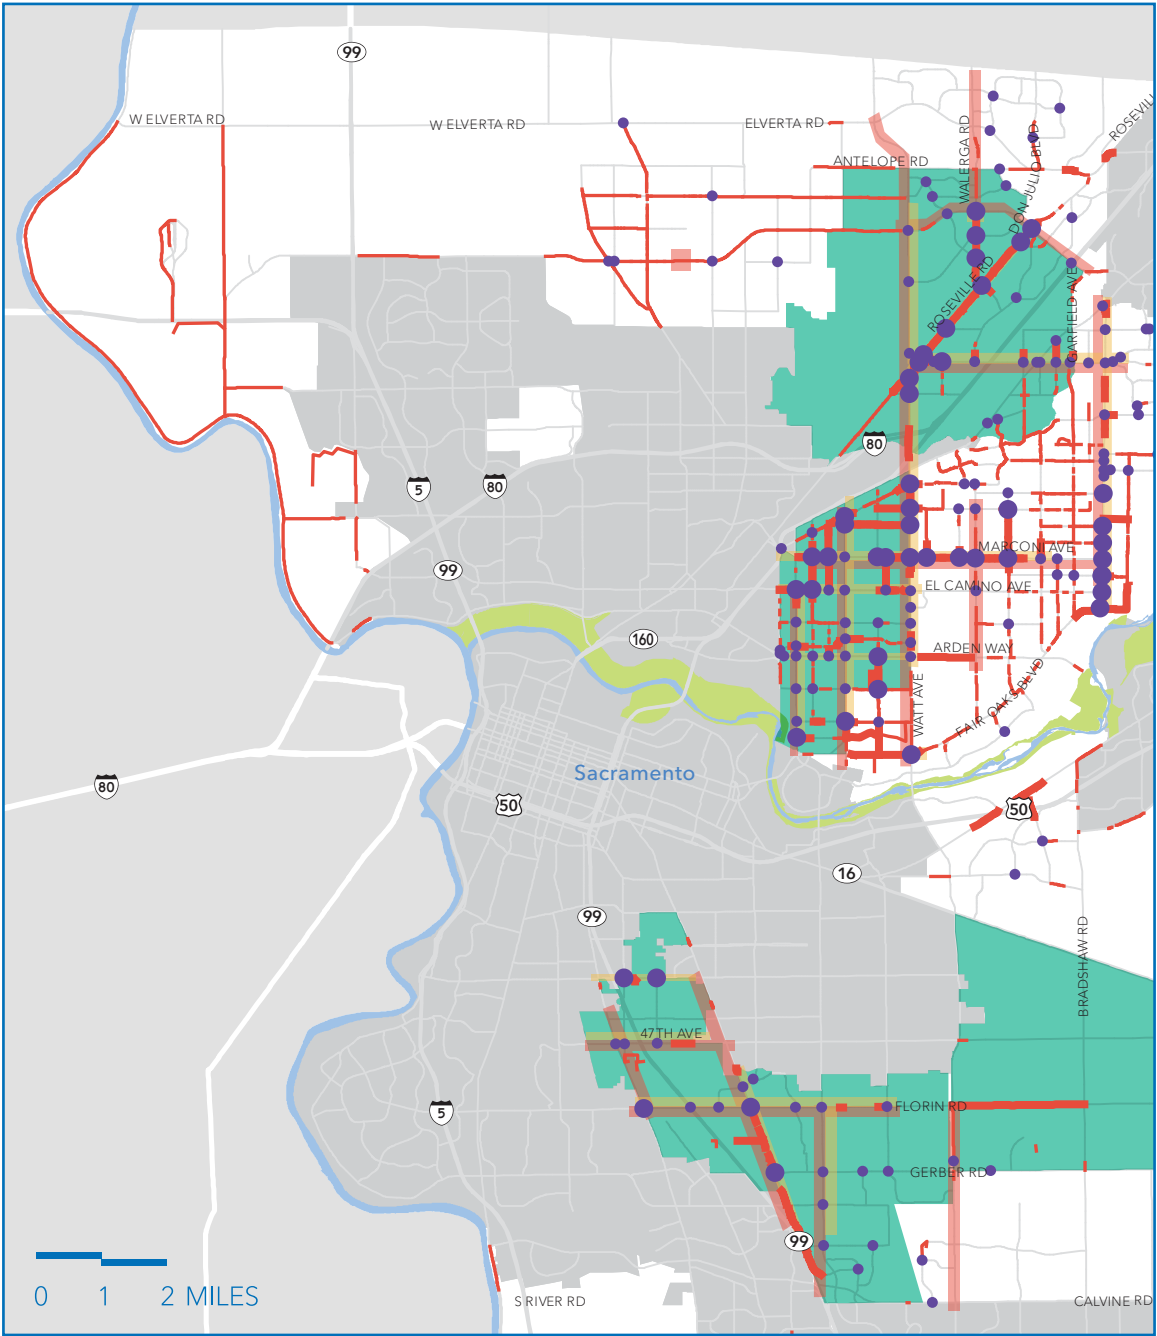

holistic streetscape improvements (and opportunities for project cost savings) for people walking in these areas. Priority sidewalk gap locations are primarily along arterial and collector streets. Building these sidewalks will help fill important gaps in the pedestrian network, improving overall connectivity and access. **Figure 23** displays the prioritized pedestrian and sidewalk gap closure projects. Table D-3 in Appendix D provides prioritization scoring for all pedestrian projects.

BICYCLE PROJECTS

Prioritized bicycle projects represent 190 miles of projects that will enhance safety, improve connectivity, and close critical gaps in the bicycle network, as shown in Appendix D. Study corridors were scored as separated bikeway (Class IV) recommendations. Priority projects received a composite score of 3.75 or higher, or filled a gap in the bicycle network between priority projects and existing bikeways.

Prioritized projects represent recommendations on local, collector, and arterial roads across Sacramento County. Combined, these projects form a connected network of facilities that will close important gaps in the network and help provide continuous access on designated bicycle facilities to essential destinations within neighborhoods and other parts of the County. There are prioritized bicycle projects on most bicycle-HIN corridors. These critical safety improvements can make bicycling to more places more practical for people of varying ages and abilities. Prioritized projects include

various project types, including trails, bicycle lanes, bicycle boulevards, and corridor studies of varying complexities. A diverse group of prioritized projects allows the County to move forward with bicycle network improvements on multiple fronts. Including study corridors in the analysis also guides the County on which of these more complex projects should be studied first.

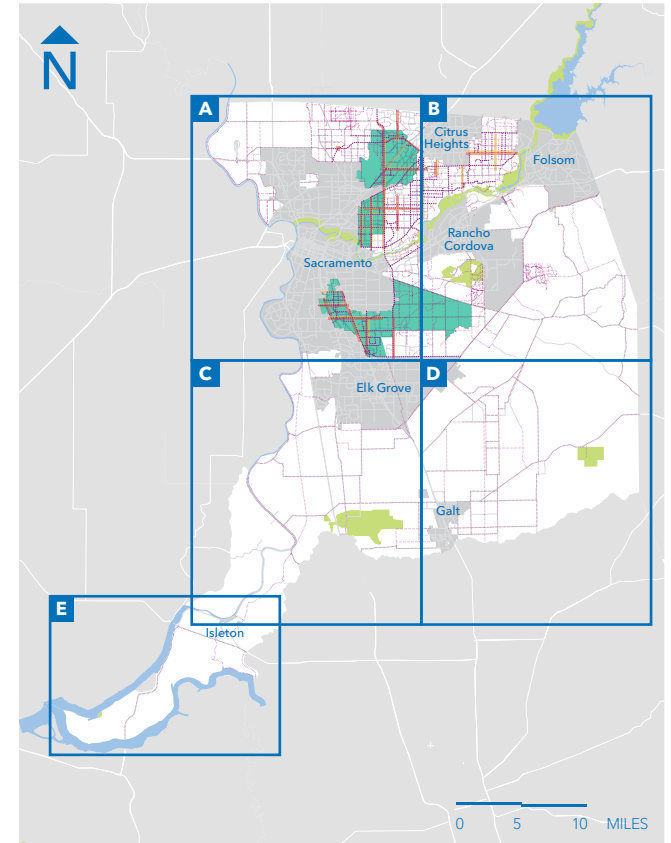

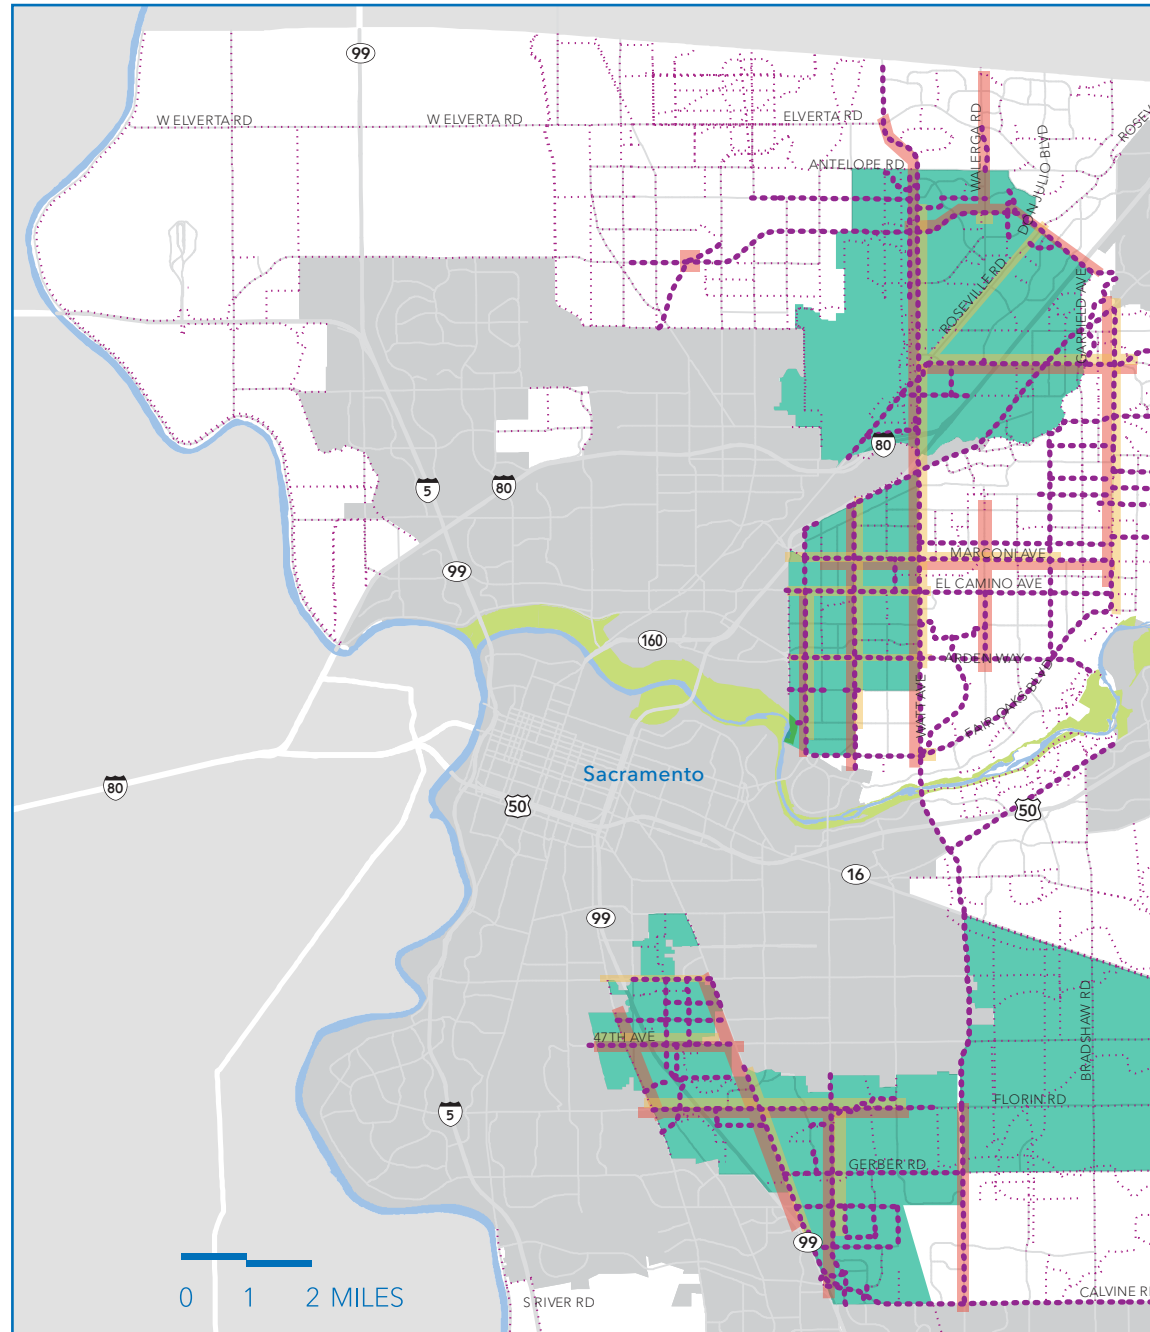

**Figure 24** displays the prioritized bicycle projects. Table D-5 in Appendix D provides prioritization scoring for all bicycle projects.

# Project Funding

## Funding Strategy

Identifying and securing funding for programs and infrastructure recommendations is essential to achieving the goals established in this Plan. The following section contains detailed

descriptions of local, regional, state, and federal funding opportunities. **Table 06** below breaks down funding sources by eligible project types (planning, design, constructions, programs, etc.).

Project priority is only one consideration when pursuing grant opportunities. The County considers both the priority and the grant criteria in determining the project or projects to pursue for any grant funding. The County also considers existing or planned projects when determining infrastructure to prioritize.

Table 06. Funding Sources

# Funding Sources

This section provides a brief overview of the available local, state, and federal funding streams for active transportation-related projects. The funding opportunities include competitive grants, impact fee/assessment district strategies, and formula-based funding methods.

## LOCAL AND REGIONAL FUNDING

### Sacramento Transportation Authority (STA) Measure A

This funding source is derived from a half-cent sales tax imposed in Sacramento County, administered by STA, and distributed to incorporated cities and unincorporated Sacramento County to fund specific transportation maintenance and projects. Measure A included three ongoing programs: Traffic Safety, Bicycle/Pedestrian Safety, and Maintenance funds. Additionally, there is a capital component to help fund large capital improvement projects identified in the Countywide Transportation Expenditure Plan.

Funds are programmed by STA.

### Sacramento Area Council of Government (SACOG) Regional Program

SACOG’s Regional Program funds cost-effective transportation projects that advance the goals established in SACOG’s Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). These goals include decreasing vehicle miles traveled, increasing the number of bicycle and pedestrian trips, and reducing greenhouse gas emissions, among others. The Regional program will fund projects identified explicitly in the MTP/SCS or lump-sum category projects, such as “Bike/Ped” or “Capacity” projects. The program seeks to promote effective and efficient use of limited state and federal resources to develop and maintain the regional transportation network.

Funds are programmed by SACOG.

### Transportation Development Act (TDA) Article 3

TDA is administered locally by the Sacramento Area Council of Governments (SACOG). This act allocated federal funding toward transit and transportation projects, including bicycle and pedestrian facilities. 2% of the funding allocated to Sacramento County is designated for bicycle and pedestrian projects under the TDA Local Transportation Fund (LTF).

Funds are programmed by SACOG.

**Sustainable Transportation Equity Project (STEP)**

The Sustainable Transportation Equity Project (STEP) is a grant program that will provide safe, environmentally sustainable, accessible, and affordable transportation options to low-income communities and communities of color. STEP applicants can either apply for either a Planning and Capacity Building grant or an Implementation Grant. The Implementation grant program will help fund the construction of new pedestrian, bicycle, and complete streets facilities.

Funds are programmed by the California Air Resources Board (CARB).

**New Development or Redevelopment/Rehabilitation**

Future new development and redevelopment projects including new road construction, resurfacing, and construction projects, are one method of providing pedestrian improvements and bike facilities. To ensure that pedestrian and bicycle improvements are included in these projects, the review process must include an individual (designated active transportation coordinator) or group (bicycle and pedestrian advisory committee) to monitor the process.

Funds are programmed by Sacramento County.

**Assessment Districts**

Different types of assessment districts can be used to fund the construction and maintenance of bikeway facilities. Examples include Mello-Roos Community Facility Districts, Infrastructure Financing Districts (SB 308), Open Space Districts, or Lighting and Landscape Districts. These types of districts have specific requirements relating to the establishment and use of funds.

Funds are programmed by Sacramento County.

Impact Fees

The Sacramento County Transportation Development Fee/Transportation Impact Fee Program (SCTDF/TIF) funds the construction of roadway and transit improvements needed to accommodate traffic and transit ridership generated by new land development allowed by the County General Plan and land use zoning through development impact fees. Assessing such fees is also a condition of receiving Measure “A” Transportation Sales Tax allocations.

The County should ensure that planning policies consider bicycle and pedestrian planning, design, and construction costs to be an eligible use of these fees.

Funds are programmed by Sacramento County.

SACOG Active Transportation Program

SACOG’s Active Transportation Program (ATP) funds infrastructure and programmatic projects that support the program goals of shifting trips to walking and bicycling, reducing greenhouse gas emissions, and improving public health. Competitive application cycles occur every one to two years, typically in the spring or early summer. Eligible projects include the construction of bicycling and walking facilities, safe routes to schools projects, new or expanded programmatic activities, or projects that include a combination of infrastructure and non-infrastructure components. Projects not funded through the state program (described in the next section) are eligible for regional consideration.

Funds are programmed by SACOG.

SACOG Community Design Funding Program

The Community Design Funding Program provides funding to local jurisdictions to build placemaking projects. Projects that implement any of the seven SACOG Blueprint Principles are eligible for funding: 1) housing options 2) transportation options; 3) infill development; 4) mixed land uses; 5) compact development; 6) preservation of natural resources, and 7) quality design .

Funds are programmed by SACOG.

**SACOG Transportation Demand Management (TDM) Program**

SACOG’s TDM Program aims to reduce vehicle trips and vehicle miles traveled using a variety of programs, services, infrastructure projects, travel strategies, and policies to change travel behavior. SACOG periodically offers TDM-focused grant opportunities to fund infrastructure and program projects that work towards TDM program goals. These include traditional grants, mini-grants, and innovations grants.

Funds are programmed by SACOG.

**SACOG Innovative Mobility Program**

The Innovative Mobility Program designs and launches projects and programs that increase transportation options and reduce vehicle miles traveled (VMT) to make options like biking, walking, and taking transit the easy choice for all types of trips. The program has four goals: 1) reduce VMT and vehicle emissions, 2) leverage new technologies and partnerships, 3) increase access to existing transit and micromobility services, 4) inform the Metropolitan Transportation Plan/ Sustainable Communities Strategy (MTP/SCS), and 5) support policies that increase access and benefit underserved communities.

Funds are programmed by SACOG.

**STATE AND FEDERAL FUNDING**

**California Active Transportation Program**

California’s Active Transportation Program (ATP) funds infrastructure and programmatic projects that support the program goals of shifting trips to walking and bicycling, reducing greenhouse gas emissions, and improving public health. Competitive application cycles occur every one to two years, typically in the spring or early summer. Eligible projects include the construction of bicycling and walking facilities, safe routes to schools projects, new or expanded programmatic activities, or projects that include a combination of infrastructure and non-infrastructure components. Typically, no local match is required for statewide funding, though extra points are awarded to applicants who identify matching funds.

Funds are programmed by the California Transportation Commission (CTC).

**Sustainable Transportation Planning Grants**

Caltrans Sustainable Transportation Planning Grants are available to communities for planning, study, and design work to identify and evaluate projects, including conducting outreach or implementing pilot projects. Communities are typically required to provide an 11.47 percent local match, but staff time or in-kind donations are eligible to be used for the match provided the required documentation is submitted.

Funds are programmed by Caltrans.

**Highway Safety Improvement Program**

Caltrans offers Highway Safety Improvement Program (HSIP) grants every one to two years. Projects on any publicly owned road or active transportation facility are eligible, including bicycle and pedestrian improvements. HSIP focuses on projects that explicitly address documented safety challenges through proven countermeasures, are implementation-ready, and demonstrate cost-effectiveness.

Funds are programmed by Caltrans.

**Solutions for Congested Corridors Program**

Funded by SB1, the Congested Corridors Program strives to reduce congestion in highly-traveled and congested roads through performance improvements that balance transportation improvements, community impacts, and environmental benefits. This program can fund a wide array of enhancements, including bicycle facilities and pedestrian facilities. Eligible projects must be detailed in an approved corridor-focused planning document. These projects must include aspects that benefit all modes of transportation using an array of strategies that can change travel behavior, dedicate right of way for bikes and transit, and reduce vehicle miles traveled.

Funds are programmed by the CTC.

**Office of Traffic Safety**

Under the Fixing America’s Surface Transportation (FAST) Act, five percent of Section 405 funds address non-motorized safety. These funds may be used for law enforcement training related to pedestrian and bicycle safety, enforcement campaigns, and public education and awareness campaigns.

Funds are programmed by the California Office of Traffic Safety.

**Recreational Trails Program**

The Recreational Trails Program helps provide recreational trails for both motorized and non-motorized trail use. Eligible products include trail maintenance and restoration, trailside and trailhead facilities, equipment for maintenance, new trail construction, and more.

Funds are programmed by the California Department of Parks and Recreation.

**Affordable Housing and Sustainable Communities Program**

The Affordable Housing and Sustainable Communities Program (AHSC) funds land-use, housing, transportation, and land preservation projects that support infill and compact development that reduces greenhouse gas (GHG) emissions. Projects must fall within three project area types: transit-oriented development, integrated connectivity project, or rural innovation project areas. Fundable activities include affordable housing developments, sustainable transportation infrastructure, transportation-related amenities, and program costs.

Funds are programmed by the Strategic Growth Council and implemented by the Department of Housing and Community Development.

Urban Greening Grants

Urban Greening Grants support the development of green infrastructure projects that reduce GHG emissions and provide multiple benefits. Projects must include one of three criteria, most relevantly: reduce commute vehicle miles traveled by constructing bicycle paths, bicycle lanes, or pedestrian facilities that provide safe routes for travel between residences, workplaces, commercial centers, and schools. Eligible projects include green streets and alleyways and non-motorized urban trails that provide safe routes for travel between homes, workplaces, commercial centers, and schools.

Funds are programmed by the California Natural Resources Agency.

Habitat Conservation Fund

The Habitat Conservation Fund Program supports projects that bring urban residents into park and wildlife areas, protect plant and animal species, and acquire and develop wildlife corridors and trails.

Funds are programmed by the California Department of Parks and Recreation.

Statewide Park Program (SPP)

The Statewide Park Program solicits competitive grants to fund new parks and recreation opportunities in critically underserved communities across California. Funds can be used to create and expand/renovate existing parks. All projects must include at least one “recreation feature,” which includes non-motorized trails. No match is required.

Funds are programmed by the California Department of Parks and Recreation.

### Trade Corridor Enhancement Program (TCEP)

The Trade Corridor Enhancement Program provides funding for infrastructure improvements on federally designated Trade Corridors of National and Regional Significance. TCEP can fund a variety of project types as long as the project has direct nexus to improving freight system's economic activity or vitality, improves safety, improves connectivity, and reduces community impacts.

Funds are programmed by California Transportation Commission.

### USHUD Community Development Block Grant Program

The Community Development Block Grant (CDBG) Program provides annual grants on a formula basis to states, cities, and counties to develop healthy and sustainable urban communities by providing housing and a suitable living environment, and by expanding economic opportunities, principally for low- and moderate-income persons. CDBG can fund new infrastructure (sidewalks and roadways) and significant roadway changes (i.e., a project that could be completed with sealing would not be eligible, but a project that included a new asphalt overlay would be eligible for funding). Roadway projects included as part of larger community development projects (housing, community centers, etc.) would improve scoring.

Funds are programmed by the U.S. Department of Housing and Urban Development

# Cost Estimates

**Table 07** provides planning-level construction cost estimates for many pedestrian infrastructure treatments. Detailed engineering design work will be necessary to determine the specific costs of individual projects. Table D-1 in Appendix D provides construction cost estimates for recommended pedestrian projects. Table D-2 provides cost estimates for recommended sidewalk projects.

Table 07. Pedestrian Facility Construction Costs (2021 dollars)

	Unit	Cost (with soft costs*)	Assumptions
Sidewalk (6 foot)	LF	\$280	Includes curb and gutter
Sidewalk (10 foot)	LF	\$340	Includes curb and gutter
Remove slip lane	EA	\$31,000	Replace existing ramp and square up corner
Advance stop pavement markings	EA	\$1,085	Install STOP marking
Advance yield pavement markings		\$545	Install yield shark teeth marking
Roadway lane striping	LF	\$5	Restripe one lane per linear foot
Crosswalks	EA	\$7,750	High-visibility crosswalk
Traffic signal	EA	\$465,000	Full traffic signal
Pedestrian hybrid beacon (PHB)	EA	\$232,5000	PHB signal on two mast arms
Curb ramp	EA	\$8,525	One corner
Curb extensions (2 corners)	EA	\$31,000	Two corners
Rectangular Rapid Flashing Beacon (RRFB)	EA	\$38,750	RRFBs at two approaches
Median island (singular)	EA	\$12,400	4x10 ft concrete median at one crosswalk
Median island (SF)	SF	\$25	Concrete median
No right turn on red (sign and phasing)	EA	\$9,300	Install blank out sign, update signal phasing
Update signal timing	EA	\$6,200	Update signal phasing/timing
Asphalt pavement	SF	\$15	Formalize dirt path with asphalt pavement

\*Soft costs include the following: 10% mobilization, 15% traffic control, 10% utility coordination, and 20% contingency)

**Table 08** provides planning-level cost estimates for each class of bicycle facility. These are planning-level cost estimates; additional detailed engineering design work will be necessary to determine specific costs of individual projects. Table D-3 in Appendix D provides cost estimates for recommended bicycle projects.

Table 08. Bicycle Facility Construction Costs (2021 dollars)

	Costs per mile (with soft costs*)	Assumptions
Shared-Use Path	\$1,636,800	10-foot-wide multi-use path with decomposed granite shoulders
Bicycle Lane	\$132,000	Two sides of the street
Buffered Bicycle Lane	\$158,400	2 ft buffer
Bicycle Boulevard	\$290,400	Traffic calming and intersection improvements
Separated Bikeway	\$2,059,200	\$1,848,000 for one-way facilities, \$2,217,600 for bi-directional facilities

\*Soft costs include the following: 10% mobilization, 15% traffic control, 10% utility coordination, and 20% contingency)

# Maintenance

Proper maintenance of bicycle facilities, shared used paths, and sidewalks are essential for safe and comfortable use. Inadequately maintained facilities can create hazardous conditions and reduce the accessibility and connectivity of the bicycle and pedestrian networks. Providing safe, accessible, comfortable, and well-maintained walking, bicycling, and rolling facilities allows these modes to serve as viable travel options. The following section provides specific maintenance policies that the County should implement.

## MAINTENANCE POLICIES

The County should implement the following policies to expand and improve its active transportation networks while keeping them in a state of good repair, high usability, and accessibility.

- **Policy 1:** Identify all necessary maintenance stakeholders across Sacramento County departments and partner agencies/jurisdictions
  - Implementation Measures:
    - » Regularly coordinate to establish/update maintenance needs across the County and share resources when possible and practical
    - » Establish a facility inspection schedule to inspect facilities and update maintenance priorities at regular intervals
- **Policy 2:** Maintain designated walking and bicycling facilities to be safe, comfortable, accessible, and usable to walking, bicycling, and rolling
  - Implementation Measures:
    - » Sweep streets regularly with priority given to roads with higher pedestrian and bicycle traffic
      - Ensure the DOT has all necessary equipment to maintain all facility types, including trails and separated bikeways
      - Develop a schedule to sweep separated bikeways regularly
    - » Trim overhanging and encroaching vegetation (or work with appropriate property owners) to maintain a clear path of travel along pedestrian and bicycle facilities

- » Develop and implement an appropriate minimum paving surface standard for bicycle boulevards and other low-stress bikeways that maintain a higher safety and comfort level for active transportation users
- » Update DOT repaving project selection methodology to prioritize bicycle boulevards and other low-stress bikeways to ensure that the minimum paving surface standard is maintained
- » Consider prioritizing sidewalk repairs in front of qualifying residential properties based on pedestrian volumes and proximity to important community destinations like parks, schools, and libraries
- » Continue working with commercial property owners to repair any damaged sidewalks in front of those properties promptly
- » Incorporate maintenance needs into the design of separated bikeways to ensure proper maintenance after construction
- » Develop a construction mitigation policy for impacted pedestrian and bicycle facilities requiring County staff and contractors to create fully accessible detours of equivalent standards, where possible, when construction, maintenance, or other activities restrict the use of bikeways and walkways
- **Policy 3:** Maintain bicycle parking and other support facilities for a more comprehensive bicycle network
  - o Implementation Measures:
    - » Develop a procedure for inspection and prompt repair/ replacement of damaged bicycle racks or other facilities in public right-of-way
    - » Encourage public event organizers to provide and publicize valet bicycle parking at special events. Amend the Sacramento County event permitting process to include bicycle access accommodations and parking as part of necessary traffic control provisions

- **Policy 4:** Develop a communications protocol for facility closures/detours and network updates

- o Implementation Measures:

- » Maintain a bikeway and sidewalk status page on the DOT website. Provide notices and information on planned closures and detours
- » Regularly update digital and print bicycle and trail network maps. Distribute paper maps at libraries, community centers, community events, bike shops, and other locations
- » Promote Sacramento County's 311 service as an easy-to-use method for the public to report maintenance and other facility issues. 311 can also potentially be used to provide suggestions on new walking or bicycling facilities to Sacramento County DOT staff

In addition to infrastructure maintenance, it is also crucial for the County to regularly update and maintain its Geographic Information Systems (GIS) database of projects. The County should follow the GIS update procedures listed in Appendix E.

MAINTENANCE COSTS

Forecasting the maintenance costs of bicycle facilities is an integral part of annual budgeting processes. **Table 09** provides planning-level maintenance costs for bicycle facilities broken down by facility type.

Table 09. Annual Maintenance Costs

Facility Type	Cost per mile per year	Miles per year	Total Annual Cost	Notes
Class I Shared Use Paths	\$8,500	349.1	\$2,967,350	Lighting, debris cleanup, and removal of vegetation overgrowth, patching pavement, adding decomposed granite to shoulders
Class II Bicycle Lanes and Class IIB Buffered Bicycle Lanes	\$1,500	632.9	\$949,350	Repainting the lane strips and stencils, sign replacement as needed
Class III Bicycle Route/ Boulevards	\$1,000	54.2	\$54,200	Sign and shared-lane stencil replacement as needed
Class IV Separated Bikeways	\$4,000	145.6	\$582,400	Debris removal, repainting stripes and stencils, sign replacement, replaced damaged barriers

## Interagency Coordination

Some of the infrastructure recommendations in this Plan are in the rights-of-way of agencies other than Sacramento County, such as Caltrans. The County will have to coordinate with the appropriate stakeholder(s) for planning, design, funding, and implementation. These partner agencies may have the final approval on these projects, even if they are located within unincorporated Sacramento County.

Partnerships with community-based organizations and other walking and biking focuses groups will be vital for expanding active transportation programming across Sacramento County. These partners can not only help provide the programming but can also help promote them within the communities they serve.

## Quick Build Projects

Many infrastructure improvements (especially pedestrian projects and intersection geometry changes) can be completed using signage, striping, and other quick-build strategies (e.g., paint-and-post and other temporary materials). These improvements can be left permanently or built temporarily until additional funding for design and construction can be secured for permanent, more expensive design iterations.

# Appendix A-1: Existing Conditions Technical Summary

# Introduction

## COMMUNITY CONTEXT

Sacramento County is located in the middle of the 400-mile long Central Valley, 87 miles east of San Francisco and 100 miles west of Lake Tahoe. Sacramento County has seven incorporated cities: Sacramento, Elk Grove, Citrus Heights, Folsom, Galt, Isleton, and Rancho Cordova. Three of the cities were only recently incorporated, including Citrus Heights (1997), Elk Grove (2000), and Rancho Cordova (2003). Encompassing a total of 994 square miles, the county surrounds Interstate 80 (I-80) and US Route 50 (US 50) east of Yolo County and Interstate 5 (I-5) and State Route 99 (SR 99) north of San Joaquin County and east of Solano County. Sacramento County shares borders with Sutter County and Placer County to the north and El Dorado County to the East.

The unincorporated County is well developed and densely populated along the I-80 and US 50 corridors and the northern portion of the SR 99 corridor while the remainder of the unincorporated County is more sparsely populated with land either devoted to farming or undeveloped.

The United States Census 2018 American Community Survey (ACS) estimates a population of 584,127 for unincorporated Sacramento County, approximately 40% of the total population of Sacramento County. The unincorporated population has grown 5.3% since the 2010 census population count and the median age for the entire county has increased from 34.8 to 36.6 over the last 10 years.

## TRANSPORTATION OVERVIEW

Based on the 2018 ACS<sup>13</sup>, there are approximately 270,000 workers 16 years or older in unincorporated Sacramento County. The majority of workers commute by car, either alone (81.3%) or carpooling (7.4%) while fewer than a percent each commute by walking (0.9%) or bicycle (0.4%). These are significantly lower than the 2012 SACOG regional averages<sup>14</sup> of 2.1% commute mode share for walking and 1.8% commute mode share for biking. The average time to commute to work or unincorporated

<sup>13</sup>Based on the total workers in Sacramento County minus the workers in each incorporated City.

<sup>14</sup>2016 SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy

Sacramento County workers is 27.8 minutes.

The 2016 SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy document states that:

“Data on non-commute bike and walk trips is difficult to assemble for the region—estimates are dependent on relatively small sample surveys, model estimates, and anecdotal data. The table shows a significant increase in all-purpose bike and walk share, from about 7.3 to 9.1 percent. It is reasonable to assume that the recent trend in all-purpose biking and walking has been upward, given that commuting shares have increased.”

It also provides estimates for all travel for the entire SACOG region of 1.9% of trips are people bicycling and 7.2% of trips are people walking. Given that the commuting mode split for unincorporated Sacramento County is two to four times lower than the regional averages, it is reasonable to assume that the mode split is similarly lower across all trips.

# Multimodal Connections to Transit

Currently Sacramento Regional Transit (SacRT) buses and light rail run through the communities, with a total annual ridership of about 21 million passengers in FY 2019. The light rail saw a weekday average ridership of 40,000, while average weekday bus ridership was 37,000 passengers per day. The majority of light rail routes run within the City of Sacramento; however, the Gold Line runs along Folsom Boulevard between Sacramento and Folsom. Three of the stations within unincorporated Sacramento County have Park & Ride lots that connect that act as a connection between the light rail, bus routes, and surrounding communities.

- **Watt/Manlove Station** has stops for SacRT Bus Routes 72, 84. It also connects to a Class I multiuse trail that provides protected crossing for US 50 and the American River, eventually connecting to regional trails that parallel the river. The station however has no secure bike parking and minimal racks.

- **Butterfield Station** has stops for SacRT Bus Routes 19, 78. It also connects to Class II facilities on Mayhew Road which provides crossing for US 50 and connection to residential communities to the South. There is also an existing facility to the north along a canal connecting to the American River which is blocked by locked gates. The station however has no secure bike parking and minimal racks.
- **Hazel Station**, located between Rancho Cordova and Folsom, is a Park and Ride that also acts as a bus terminal but does not serve any bus routes. The station isn't connected to any nearby communities or bicycle facilities.
- **Starfire Station**, located off of Folsom Boulevard in the Rosemont community, is served by the Gold Line and the 84 bus route. The station has no secure bike parking and minimal racks. There are bike lanes on Folsom Boulevard.

- **Tiber Station**, located off Folsom Boulevard in La Riviera, is served by the Gold Line but no bus stops. The station has no secure bike parking and minimal racks. There are bike lanes on Folsom Boulevard.

There are also five Caltrans park & ride locations in Sacramento County, one of which is located in unincorporated Orangevale at the US 50 interchange with Hazel Avenue. The **Hazel Avenue Park and Ride** has no transit access and is located adjacent to the Jedediah Smith Memorial Trail.

# Vehicle Share Programs

The bike share company JUMP launched an all-electric assist bike share system in the city of Sacramento as well as the Yolo County cities of Davis and West Sacramento, with an initial offering of 300 bikes and a planned expansion of 900 bikes during summer 2018, however none of the hubs are located in unincorporated Sacramento County or Sacramento County cities east of Sacramento. There are also recreational bike share programs run by Tower Bridge Bike Share and Practical Cycle, however they are both contained within the City of Sacramento in Sacramento County.

There was a short-lived State Employee BikeShare program available to the 230,000 workers employed by the State running in the Sacramento region, however there is no longer any information available about the program and it is assumed defunct.

The tech firm Gotcha was planning to provide bike- and scooter-share programs and equipment for Elk Grove,

Folsom, and Rancho Cordova in Fall 2019, however the program was delayed due to increasing tariffs. While originally planned for a delayed rollout during Spring 2020 these programs may have been further delayed by the COVID-19 pandemic<sup>15</sup>.

There are no bike- or scooter- share programs in unincorporated County locations, however as of May 2017, the Sacramento Air Quality Management District (AQMD) has administered the Our Community CarShare Sacramento Program<sup>16</sup>, which is available to low-income Sacramento County residents and operates in currently operates in seven lower-income.

Active transportation is enjoyed by people of all ages and abilities. However, the perception of safety, lack of facilities or effective routes, or natural constraints such as heat and the presence of hilled terrain can

contribute to a person's unwillingness to walk or ride a bike. As such, users of all capabilities need to be considered when developing or expanding the active transportation network. Outside of improving the network, support through education and encouragement programs can be utilized to improve confidence in the system and increase facility use.

<sup>15</sup> <https://www.sacbee.com/news/local/article233636962.html> (referenced July 2020)

<sup>16</sup> <https://sacbreathe.org/what-we-do/air-quality/electric-vehicle-car-share/> (referenced July 2020)

# Active Transportation Supporting Policies

Current active transportation supporting policies, documentation, and plans have been reviewed. Each document differs in overarching focus and approach related to the most relevant active transportation needs in the area, however general commonalities are present. Policies, goals, and actions most commonly identified in these documents generally relate to the following:

- Invest in bicycle and pedestrian infrastructure as healthy transportation options
- Improve safety for cyclists and pedestrians
- Increase and improve access to employment, economic centers, and environmental justice communities
- Establish and expand education, encouragement, enforcement, and evaluation programs
- Collaboration with nearby jurisdictions to support a regional bicycle network

- Prioritize projects that improve access to environmental justice communities, improve safety, close gaps in the network, or are low cost or privately funded improvements

Some of the specific sources of policies and programs that will shape active transportation in Sacramento County include:

- Federal Highway Administrative (FHWA)
- American Association of State Highway and Transportation Officials (AASHTO)
- Americans with Disabilities Act (ADA)
- Federal and California State Manual on Uniform Traffic Control Devices (MUTCD)
- The State of California
- Sacramento Area Council of Governments (SACOG)

Sacramento County has many desirable characteristics to support active transportation. While temperatures rise above what might be desirable at times during the summer, the warm and dry climate of the region encourages people to walk and ride bicycles throughout the year. Most of the land in the County is generally flat, which provides an environment for those who are less confident and less able to more easily travel longer distances without tiring. The larger cities in the County are often divided by stretches with little development. This is both a constraint and an opportunity in that while regional trails longer than a few miles may be more daunting for pedestrians and less skilled or able bicycle riders, longer trails may provide sought after routes for avid cyclists and users seeking exercise.

There are currently 280 miles of existing bicycle infrastructure in the Unincorporated Region consisting of 61 miles of Class I, 209 miles of Class II and 11 miles of Class III bike lanes. The total existing sidewalks add up to 1,950 miles. A total of 1,077 miles of bikeways were proposed in the previous plan, of which six miles of Class II bike lanes have been built: four miles along Garfield Avenue from Fair Oaks Boulevard to Greenback Lane, and two miles along California Avenue from Oak Avenue to Jan Drive. Existing and proposed bicycle infrastructure is shown in Figure A-1 and Figure A-2.

The following funding opportunities have been identified as potential sources for the active transportation plan<sup>17</sup>:

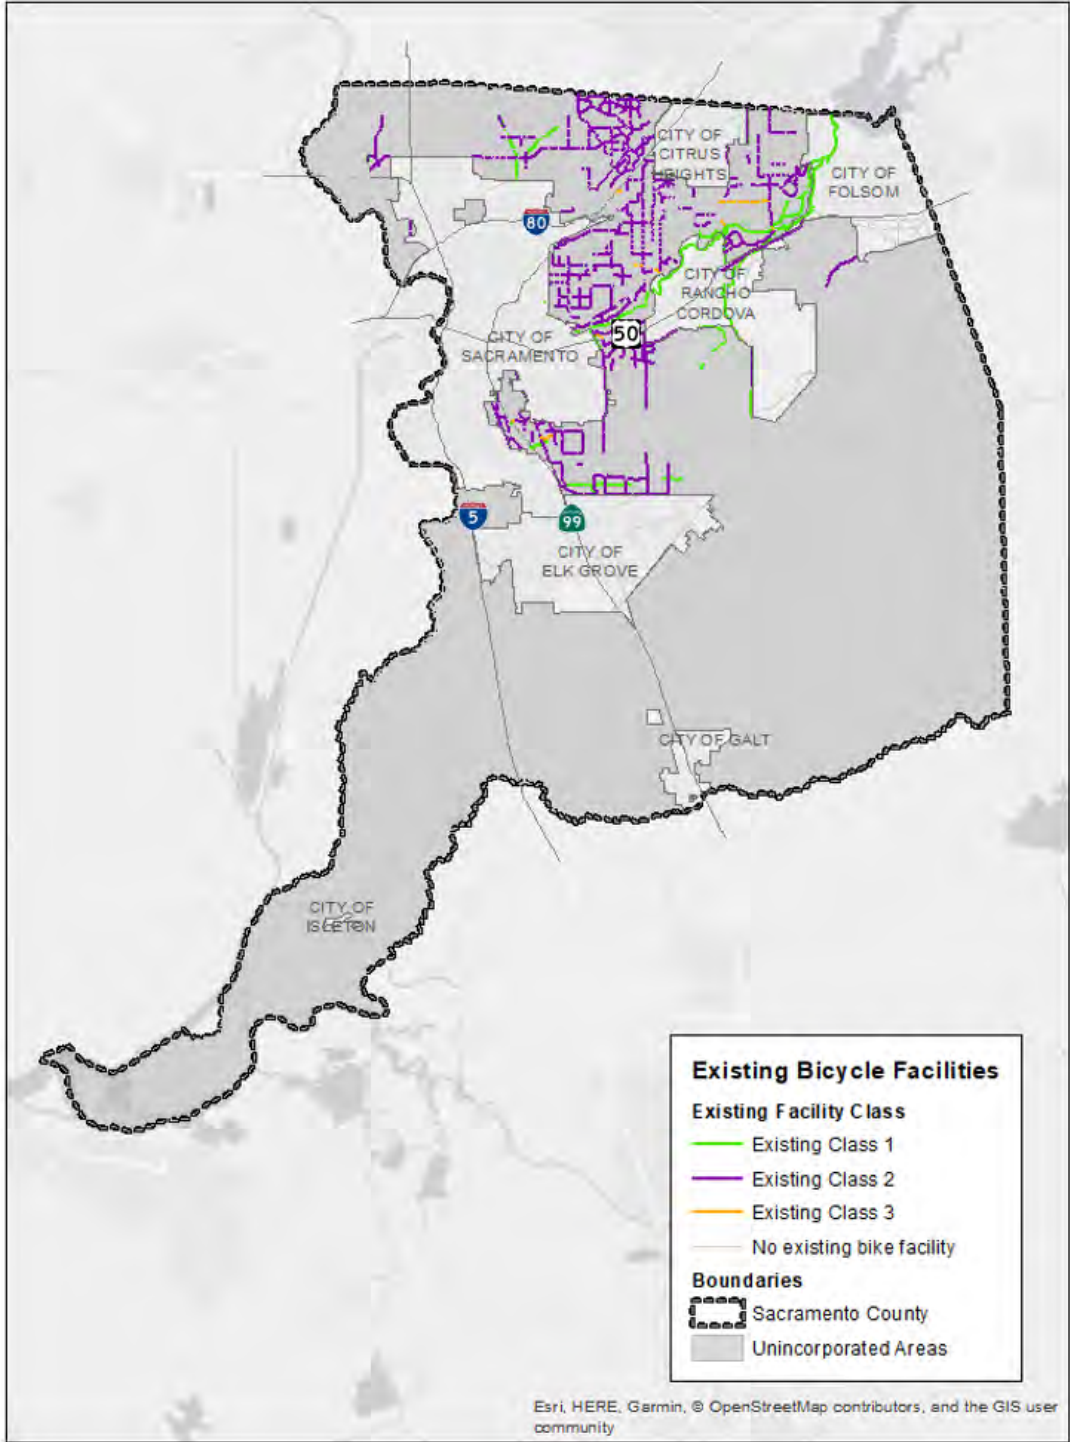

- Cap and Trade – Affordable Housing Sustainable Communities
- Office of Traffic Safety – Bicycle and Pedestrian Safety Grants
- Federal Lands Access Program – CA
- SACOG Regional Funding Programs
- State Active Transportation Program Cycle 5
- Regional Active Transportation Program Cycle 5

- Caltrans Sustainable Communities Planning Grants
- Trails and Greenways
- Blue Sky Grant Program

<sup>17</sup>[https://www.sacog.org/sites/main/files/file-attachments/b-p\\_funding\\_opps\\_att\\_8.pdf?1566419865](https://www.sacog.org/sites/main/files/file-attachments/b-p_funding_opps_att_8.pdf?1566419865)

Figure A-1. Existing Bicycle Facilities

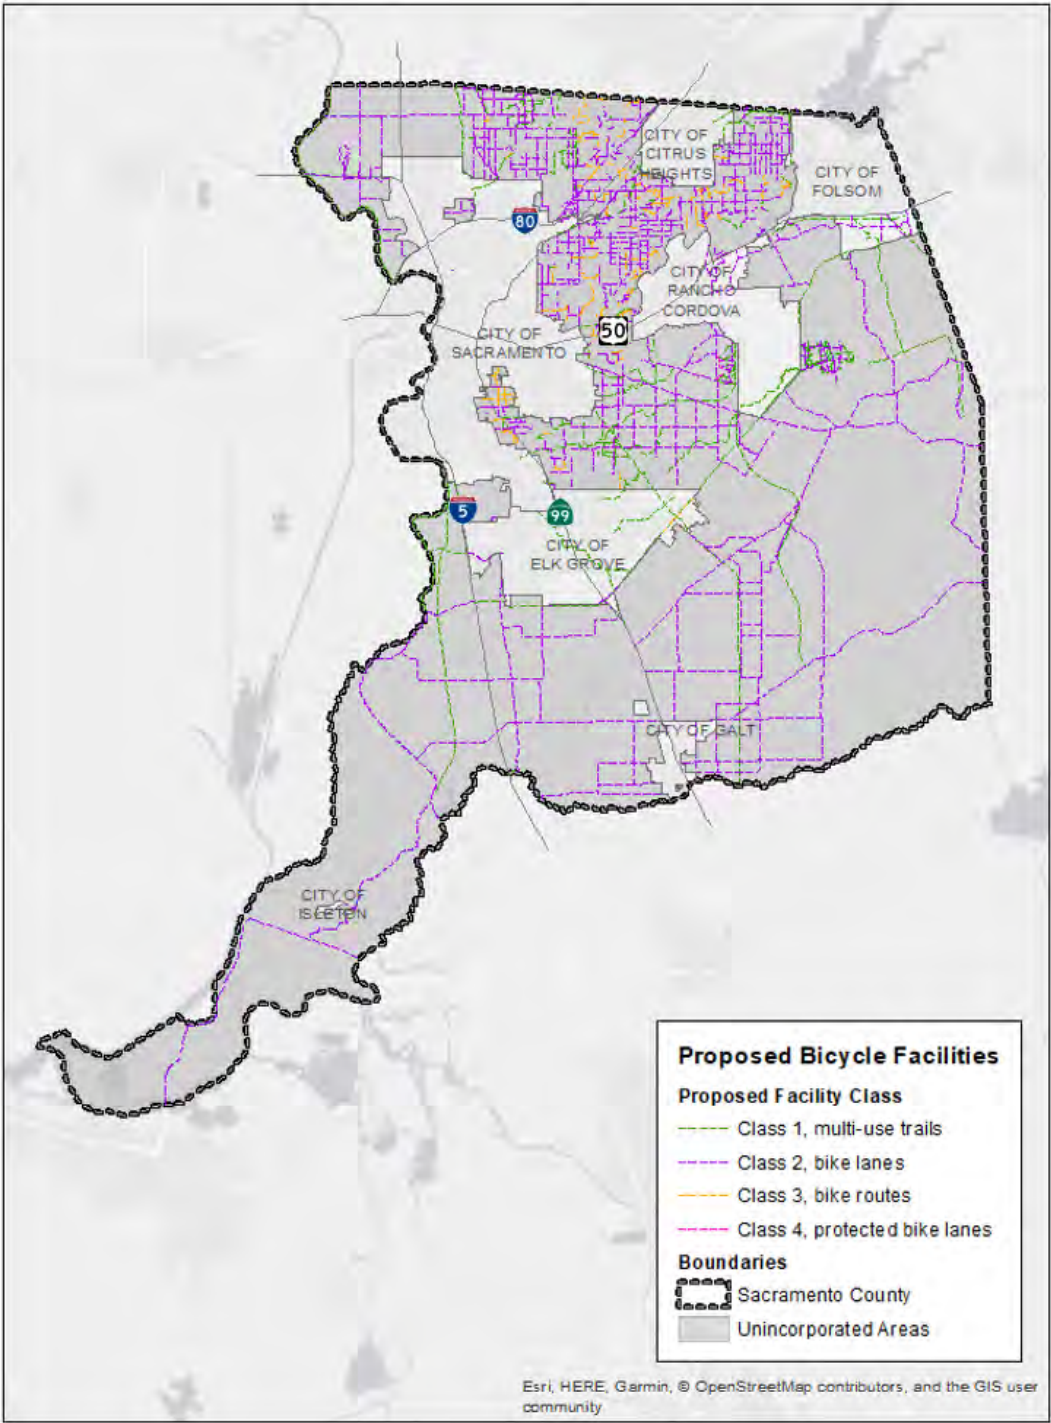

## SUMMARY

Active transportation in rural settings is also an area of weakness in active transportation plans in the region. The low density in the southern portion of the county creates a network void of connected facilities and requires long distances to travel to reach destinations. As a result, the pedestrian mode share is far lower than suburban areas. The bicycle mode share also suffers as most facilities that do exist are located on high speed, narrow roadways. While improvements to the pedestrian network may not prove fruitful, this situation does provide the opportunity to improve and expand the bicycle network.

Figure A-2. Proposed Bicycle Facilities

There are ample opportunities in suburban areas of the County to improve connectivity. Both pedestrian and bicycle networks can be expanded to ensure gapless connections to transit routes and to create desirable routes to key destinations within walking distances. Active transportation in the County would be made further desirable by offering support facilities such as water fountains for pedestrians and dedicated bicycle parking facilities for bicyclists at key destinations.

# Demand: Where do people want to go?

## SACRAMENTO COUNTY COMMUNITIES

The Sacramento County Planning department has defined community boundaries throughout the County<sup>18</sup> as shown in Figure A-3. The highest density communities include Arden Arcade, Carmichael, Fair Oaks, Orangevale, Rio Linda/Elverta, South Sacramento, and Vineyard. The Sacramento County Environmental Justice Element also identifies communities that are considered disadvantaged compared to other parts of unincorporated County based on California Communities Environmental Health Screening Tool (CalEnviroScreen), which identified communities based on socioeconomic and environmental characteristics, and the Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). The four Environmental Justice communities

identified include North Highlands/Foothill Farms, West Arden-Arcade, South Sacramento, and North Vineyard and are shown in Figure A-4.

Most people that walk or bike to work in Sacramento County are concentrated within the incorporated cities. The American River/US 50 corridor provides multiple ways to travel with trails, and transit providing alternatives to the Freeway and a dense grid of pedestrian and bicycle facilities for travel within communities. This is apparent with the highest commute mode split for walking occurring in Folsom (3.0%), City of Sacramento (2.9%), and Rancho Cordova (1.7%) while the other cities and unincorporated County show less than a percent of commute mode share for walking. Bicycle use for commuting is even more concentrated in the City of Sacramento (2.0%) while all other cities and unincorporated County show less than a percent of commute mode share for biking. This comes from a lower density of facilities and more gaps in the network.

<sup>18</sup><https://planning.sacounty.net/Pages/PlanningandCommunityMaps.aspx>

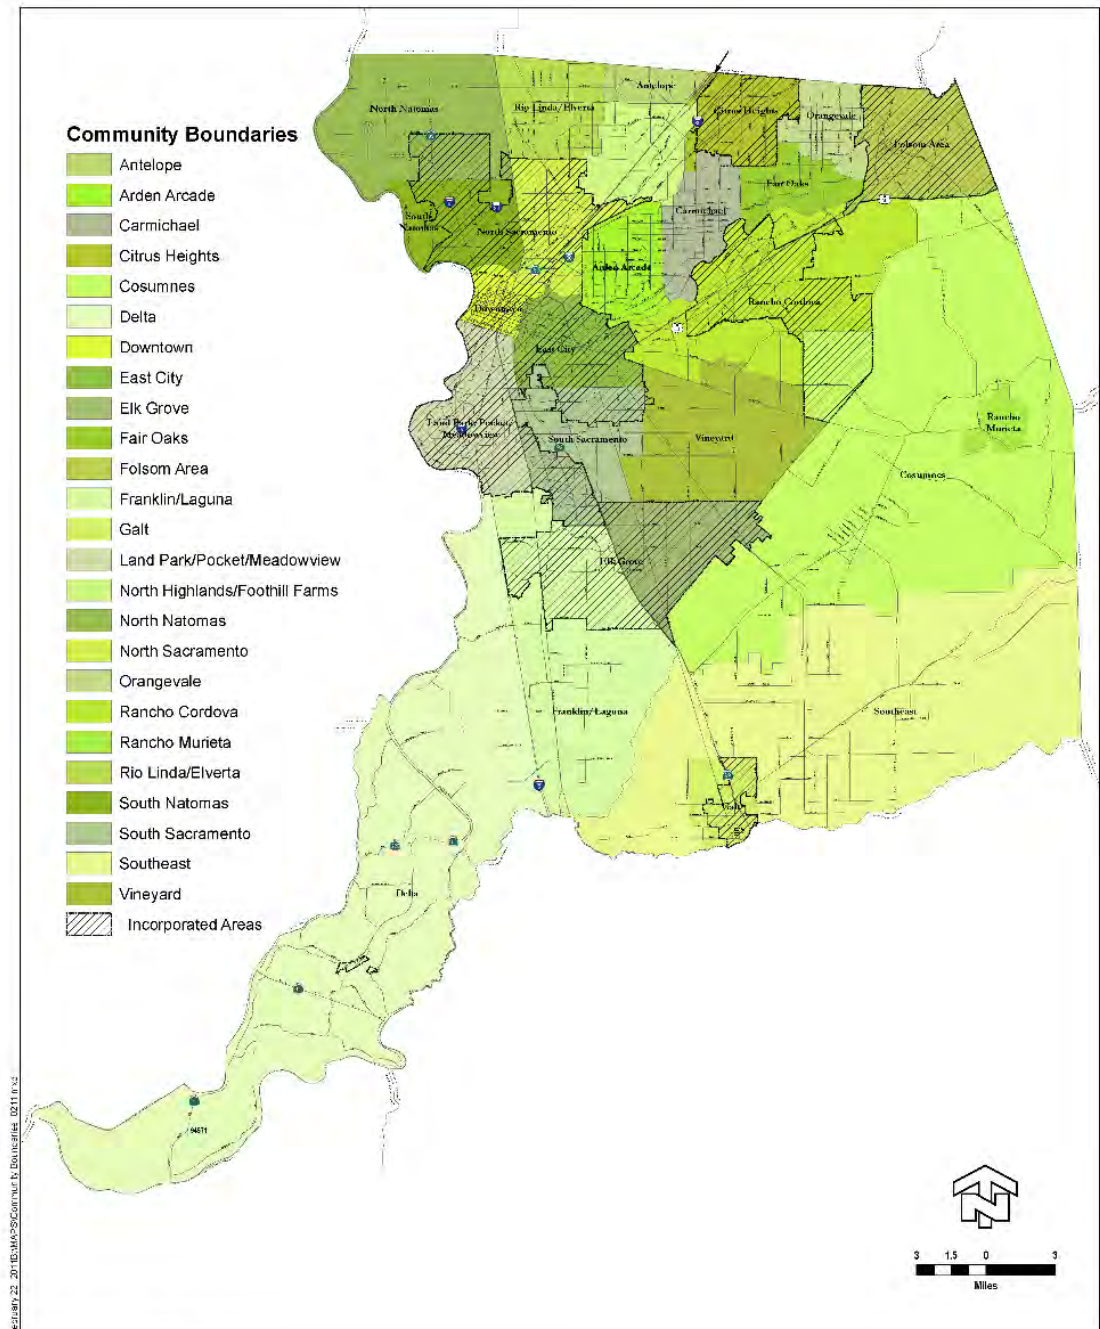

Figure A-3. Sacramento County Communities

# Employment

The eight largest employers of Sacramento County residents are a mix of public and private sector and are mainly located within incorporated cities, showing the importance of regional bicycle and pedestrian facilities for commute access. The number of local employees by employer is included in Table A-1. This shows the sectors responsible for the majority of employment in Sacramento County are Government and Health Care. This is confirmed to be true for unincorporated County residents as well, as shown in Table A-2, which shows the sectors that employ the highest proportion of residents<sup>19</sup> from unincorporated Sacramento County. A map of job density within Environmental Justice communities is shown in Figure A-5. The lowest job density for those communities occurs throughout North Vineyard and the west portion of North Highlands.

<sup>19</sup><https://onthemap.ces.census.gov/>

Government and health services are the main sources of employment in the County and the majority of employment locations are located in cities along the US 50 corridor.

Table A-1. Top Sacramento County Employers

EMPLOYER	SACRAMENTO COUNTY EMPLOYEES <sup>A,B</sup>	ADDRESS	TYPE OF BUSINESS/SERVICE
State of California	77,172	Various	Government
Kaiser Permanente	15,585	Various	Health Care System
UC Davis Health	14,510	2315 Stockton Blvd Sacramento	Health Care System
Sacramento County	12,360	700 H Street Sacramento	County Government
Sutter Health	10,764	2200 River Plaza Drive Sacramento	Health Care System
Dignity Health	9,033	3400 Data Drive Rancho Cordova	Health Care System
Intel Corp	6,200	1900 Prairie City Road Folsom	Research and Development
Raley's	6,200	Various	Grocery Store

<sup>B</sup><https://www.bizjournals.com/sacramento/subscriber-only/2020/05/29/employers-sacramento-county.html> (May 29, 2020)

Table A-2. Top Industries that Employ Unincorporated Residents

RANK	NAICS INDUSTRY SECTOR	SHARE OF UNINCORPORATED EMPLOYED RESIDENTS
1	Health Care and Social Assistance	16.40%
2	Retail Trade	10.70%
3	Public Administration	10.30%
4	Accommodation and Food Services	9.10%
5	Educational Services	8.20%
6	Administration & Support, Waste Management and Remediation	6.90%
7	Construction	6.10%
8	Professional, Scientific, and Technical Services	6.10%
9	Manufacturing	4.40%
10	Finance and Insurance	3.90%

Figure A-5. Top Sacramento County Employers

# High Intensity Land Use (Existing and Planned)

Currently, the most intense land uses, including dense residential and commercial development, in the Unincorporated region are spread across the north and east of the county. Commercial uses are mainly lined along major streets such as Watt Avenue, Auburn Boulevard, Howe Avenue and Stockton Boulevard.

Undeveloped land that has been zoned for high density residential and commercial units will generate transportation needs in the future. These will be potentially planned at the following locations:

- Shopping center south of Winding Way and east of Manzanita Ave
- Business and professional offices along Madison Ave and Harrison St
- Businesses along Walerga Road at Antelope Road

# Key Destinations

- Multifamily residential, shopping centers and businesses along Elverta Road and 16th Street
- Multifamily residential along U Street and Elverta Rail Way
- Multifamily residential along Antelope Rd at Monument Drive and along Don Julio Boulevard
- Multifamily residential along Antelope North Road
- Multifamily residential east of Sunrise Blvd at Gold Express Drive

Major travel generators and neighborhood destinations include schools, libraries, parks, commercial corridors, downtown and civic buildings. As shown in Figure A-6, these are generally located across the north and northeast parts of the county, as well as in South Sacramento. The Arden-Arcade area is a major shopping hub, with several other shopping centers along Fair Oaks Boulevard and Sunrise Boulevard.

There are a total of 158 schools in the Unincorporated region, with 17 in Carmichael, 17 in South Sacramento, 13 in North Highlands, 11 in Antelope, 10 in Orangevale, 9 in Fair Oaks, 8 in Rio Linda, and the rest spread across other parts of the county. School traffic is typically generated around 7 am to 9 am and from 2 pm to 4 pm on weekdays.

Major medical facilities include Kaiser Healthcare in Arden-Arcade and South Sacramento, VA Hospital in North Highlands, and several other specialty

care services in Carmichael, Fair Oaks and Orangevale.

Popular public libraries are the Arcade Community library, Arden-Dimick library, Carmichael Regional library, North Highlands/Antelope library, Fair Oaks and Orangeville library.

As mentioned earlier, commercial corridors line the arterial streets in eastern North Highlands, Carmichael, throughout Arden-Arcade, Orangevale along Greenback Lane, and South Sacramento along Stockton Boulevard and Franklin Boulevard. These usually generate trips in the evening on weekdays, and mostly over the weekends. American River Parkway, Dry Creek Parkway, Folsom Lake state recreational area, Del Paso regional park and Cosumnes river preserve are among the big parks of the region. Several small parks like the Arcade Creek park, Antelope Community park,

Figure A-6. Key Destinations in Unincorporated Sacramento County

Gibbons Community park and Mission North park, among others are spread across the county. Parks form important hubs of internal active transportation, especially those parks that support bicycling and walking via trails.

# Connectivity: Can residents and visitors get to where they want to go by walking or bicycling?

## EXISTING INFRASTRUCTURE

The Unincorporated region of the County has a mix of Class I, Class II and Class III bicycle infrastructure; however, the network is discontinuous in most areas. While the majority of the roads in North Highlands and South Sacramento communities have connected sidewalks, significant gaps can be noticed in West Arden-Arcade and North Vineyard (Figure A-7 and Figure A-8).

While bikeways compensate for the lack of sidewalks in these communities to some extent, adequate direct connectivity is not provided by the bicycle infrastructure. In the north, bike lanes are absent on Madison Avenue, and discontinuous on Palm Avenue, resulting in poor east-west connectivity from and to North Highlands. The connectivity along Watt Avenue is also broken due to missing stretches of bike lanes between Elkhorn Boulevard and Don Julio Boulevard in North Highlands, and between Madison Avenue and Arden Way in West Arden-Arcade.

Alternative direct bike routes or lanes are not available.

In the south Sacramento communities, bike lanes exist along major roads on Franklin Boulevard and Stockton Boulevard, providing north-south connections. However, Florin Road lacks adequate length of bicycle infrastructure, and only one discontinuous alternative bike lane along 53rd Avenue in the east-west direction. Stockton Boulevard has missing lengths of bike lanes between 21st Avenue and Fruitridge Road, and between Lemon Hill Avenue and Riza Avenue.

The western edge of North Vineyard has bike lanes along South Watt Avenue and Elk Grove-Florin Road, and a short stretch can be found along Bradshaw Road. No bike lanes can be found in the City of Isleton and Galt. Sidewalks and bikeways are present adjacent to major bus stations at American College on College Oak Drive, and at Florin Towne Center on Stockton Boulevard.

## CONNECTIVITY OF KEY DESTINATIONS

Key destinations such as schools and medical facilities are surrounded by sidewalks or bikeways but lack continuous links to most residential areas. Nine schools and one hospital within the unincorporated region were identified that lack any sidewalks and bicycle infrastructure within 750 feet of the site. These are listed below:

School Sites Lacking Adequate Active Transportation Infrastructure:

- Heritage Peak Charter
- Pathways Community Day
- C. W. Dillard Elementary
- Franklin Elementary
- Cosumnes River Elementary
- Sierra-Enterprise Elementary
- Alpha Charter
- Alpha Technology Middle
- Arcohe Elementary

Medical Facility Lacking Adequate Active Transportation Infrastructure:

- Altua (Galt)

Out of 76 medical facilities, 30 do not have access to a bus stop for an eighth of a mile, and 10 of these do not have access to bus stops for at least a quarter mile. These include:

- |                   |                  |
|-------------------|------------------|
| • Cornerstone     | • New Dawn       |
| • Walnut Whitney  | Recovery Center  |
| Convalescent      | • Sunbridge      |
| Hospital          | Brittany Care    |
| • Greater         | Center           |
| Sacramento        | • Koinonia Group |
| Surgery Center    | Homes            |
| • Altua           | • Sacramento     |
| • Eskaton Village | Area Emergency   |
| Care Center       | Housing Center   |
| • Eskaton Home    |                  |
| Care              |                  |

Parks in North Vineyard do not have any access to either bikeways, or bus stops. Parks in other parts are fairly well connected by bus services but lack bikeway connectivity. Bike trails exist along the American River Parkway and the Dry Creek Parkway.

The Rancho Cordova community library, the Courtland Community library and the Walnut Grove branch library are not connected by either bicycle infrastructure or bus stops.

# Regional and Community Connections

The Sacramento Regional Transit Light Rail connects parts of the county to Sacramento City downtown. The blue line extends north from the city center to Watt Avenue/I-80 interchange in the southern part of North Highlands. In the south, it extends to Consumnes River College. The gold line stretches east all the way to Folsom via Rancho Cordova. None of these lines provide direct connectivity to or between the identified environmental justice communities.

Communities along US 50 have access to the gold line light rail, Folsom Boulevard bike lanes, as well as Jedediah Smith Memorial Trail. Likewise, communities living along I-80 in northern West Arden-Arcade have access to the blue line and the Edison Avenue bike lanes. In the north-south direction along Watt Avenue, bus routes 26, 82 and 84 operate along with intermittent bike lanes, connecting the northern county to Arden-Arcade. The American River College bus terminal as well as the Watt/I-80 RT station in

the north facilitate these connections. The Florin Towne Center in South Sacramento provide connections to bus routes 51, 61, 68 and 81 that expand connections to Sacramento downtown in the north, Consumnes River College in the south, and loops along multiple communities.

Figure A-7. Sidewalks in North Highlands and West Arden-Arcade

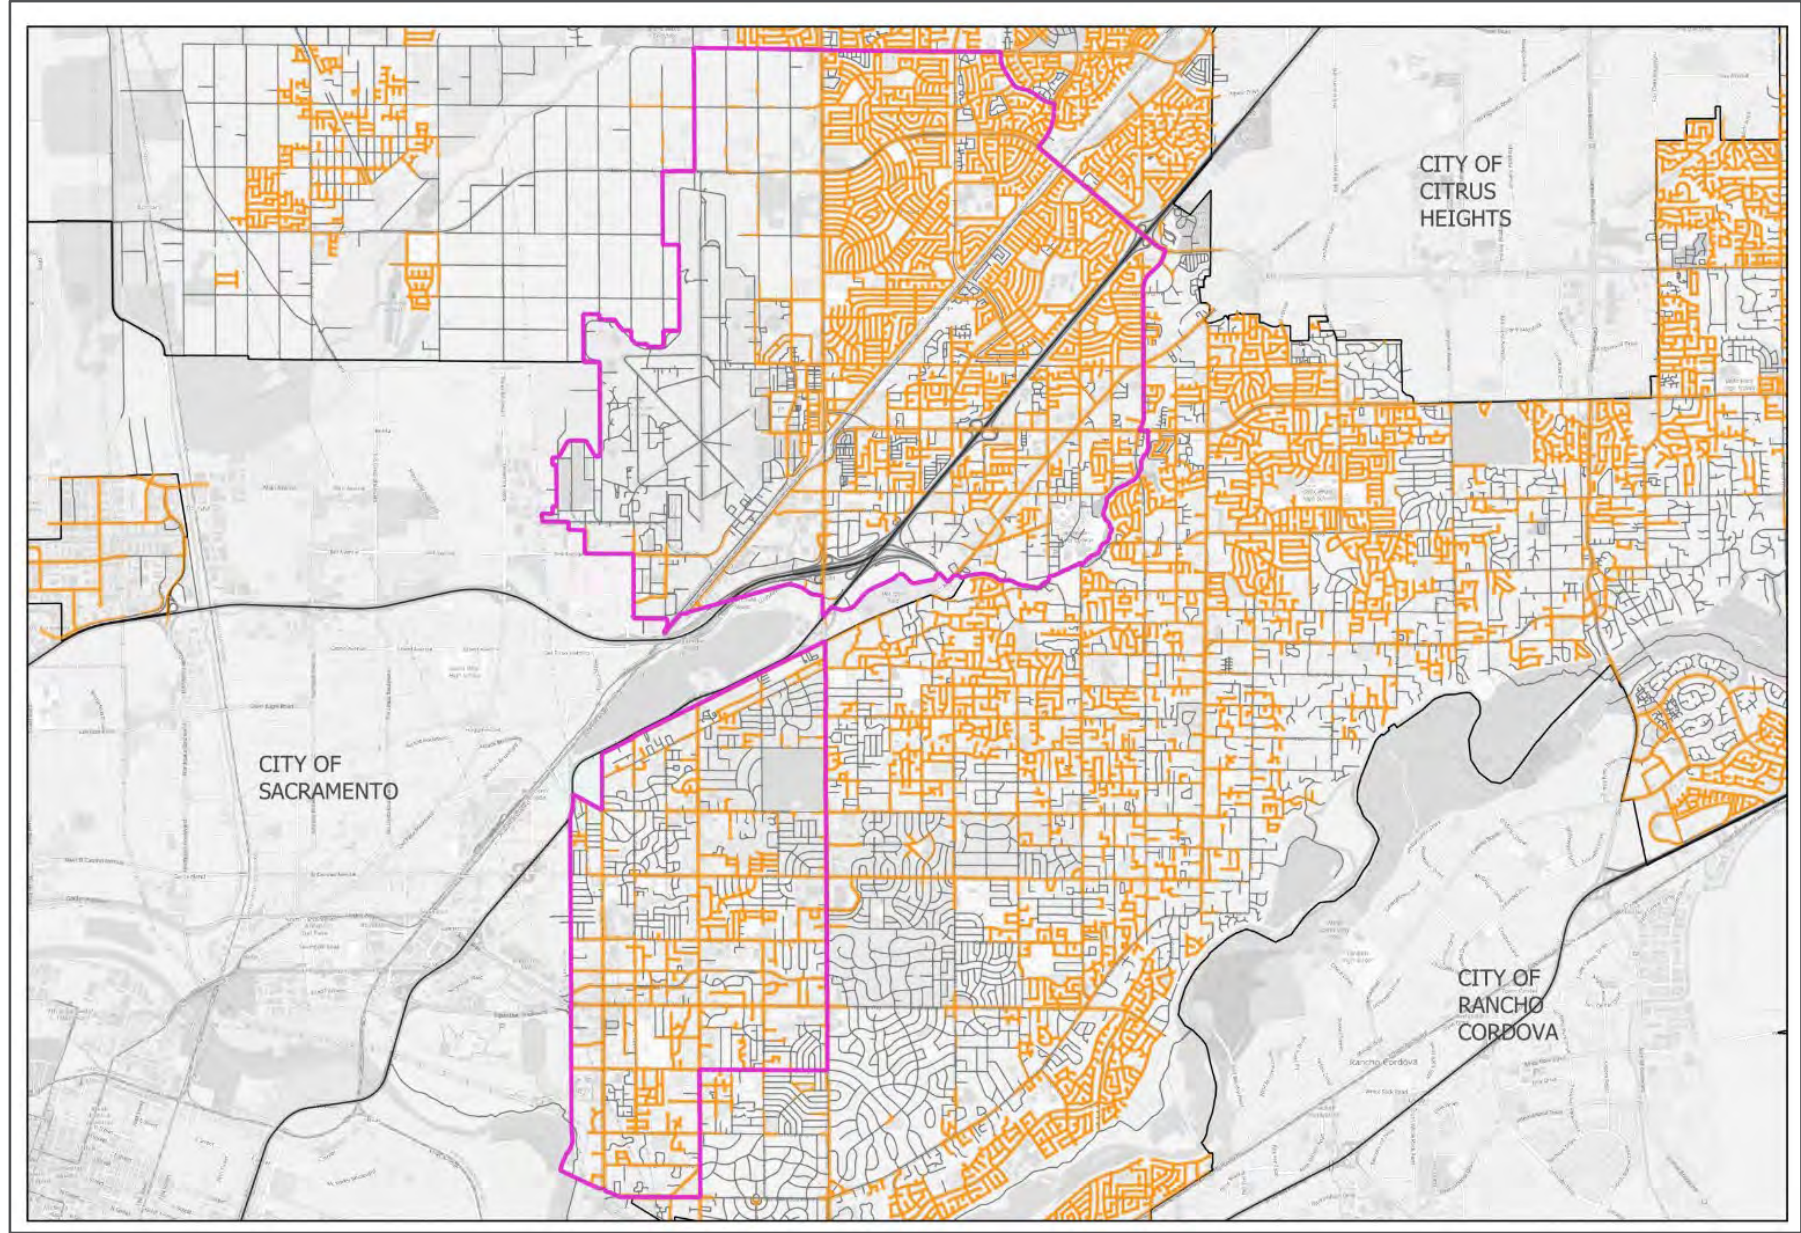

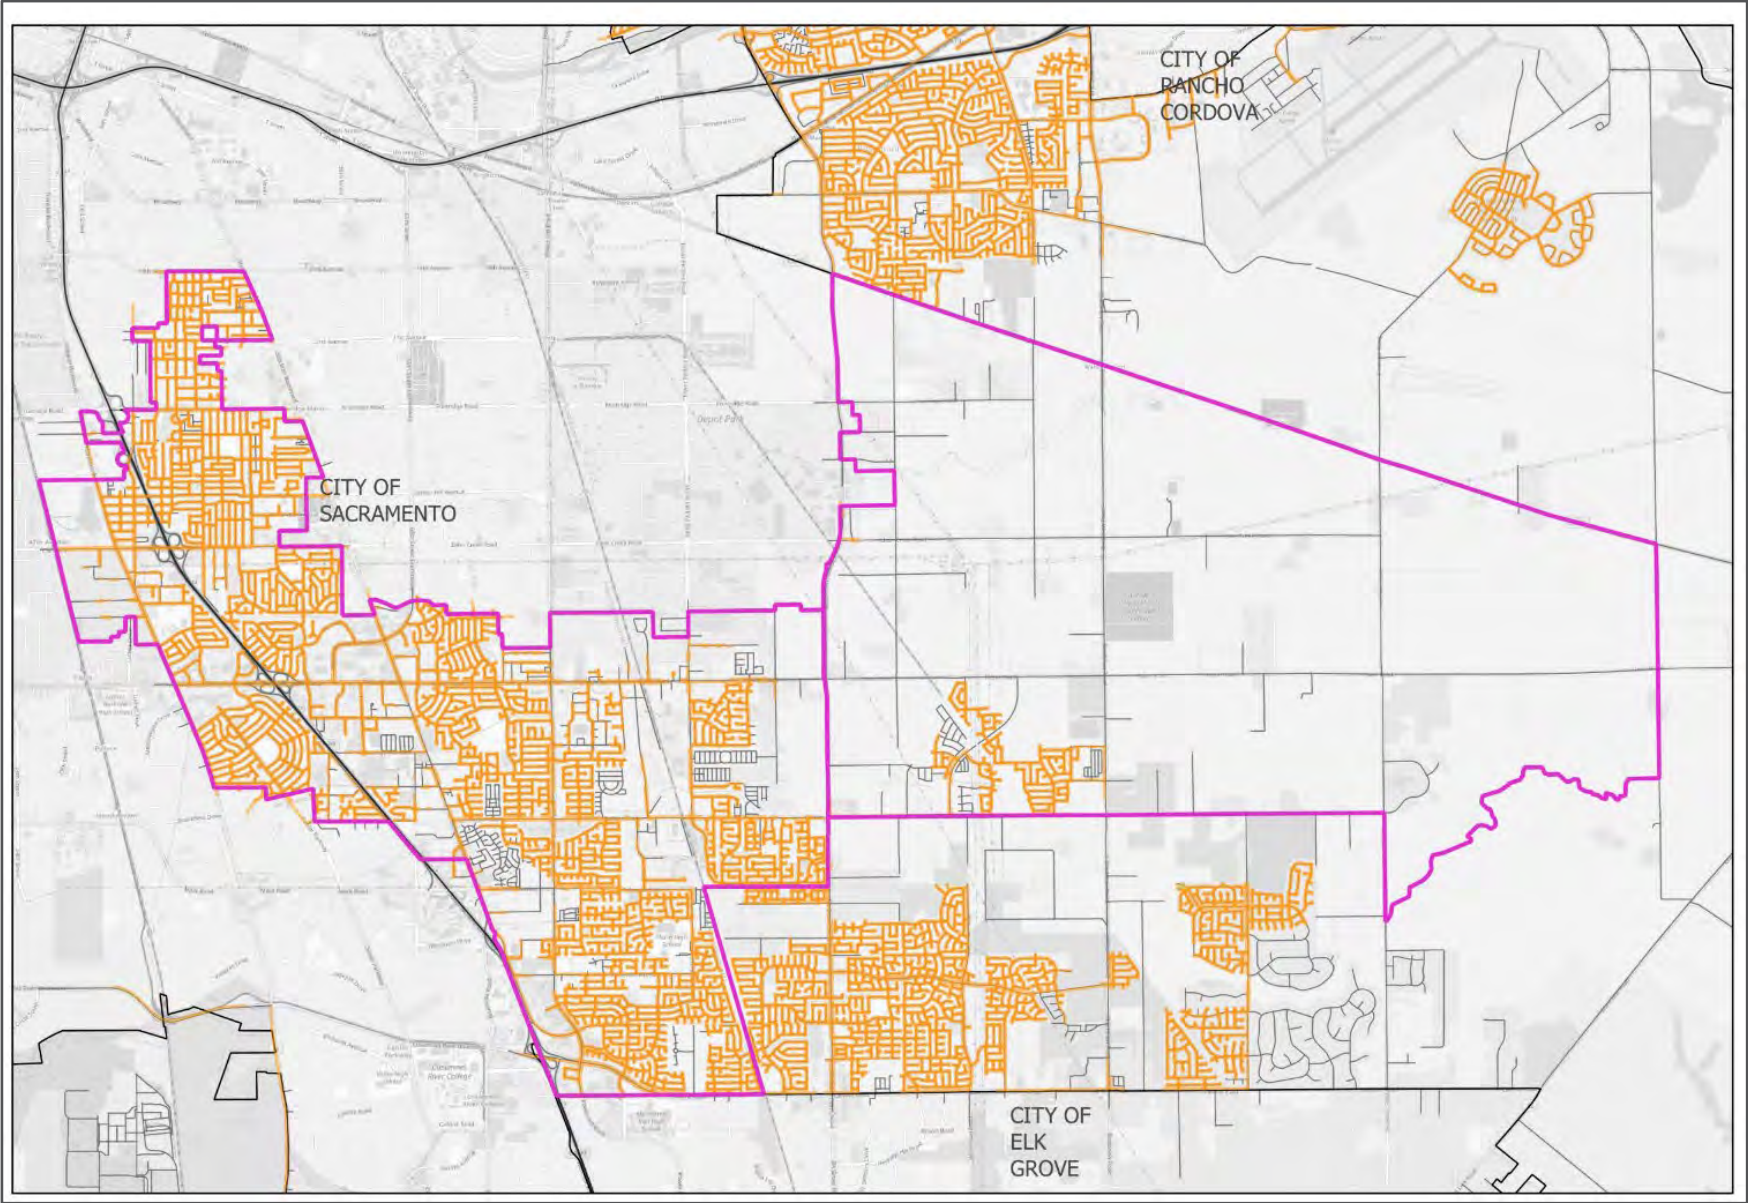

Figure A-8. Sidewalks in South Sacramento and North Vineyard

# Bicycle Parking

Sacramento County Zoning Code Section 5.9.9B sets the minimum bicycle parking requirements by land use. These are shown in Table A-3. There are two types of bicycle parking - short term and long term. Short term bicycle parking in the form of bike racks are typically used for up to two hours, for example a trip to a store or a library. Long term parking is provided for several hours at employment centers, schools and transit hubs. These tend to provide high security through bike cages, lockers or bike rooms. Bicycle parking in the County is typically provided at parks, schools and commercial developments, and specific locations are provided in the County Bicycle Master Plan.

The Sacramento County General Plan, Transit Oriented Development Design Guidelines state that transit stops, commercial areas and other key destinations must provide adequate parking to support bicycle use. Secure and safe bicycle storage areas are recommended. None of the unincorporated communities have established bicycle parking programs however.

Figure A-9. Bike Parking Demand

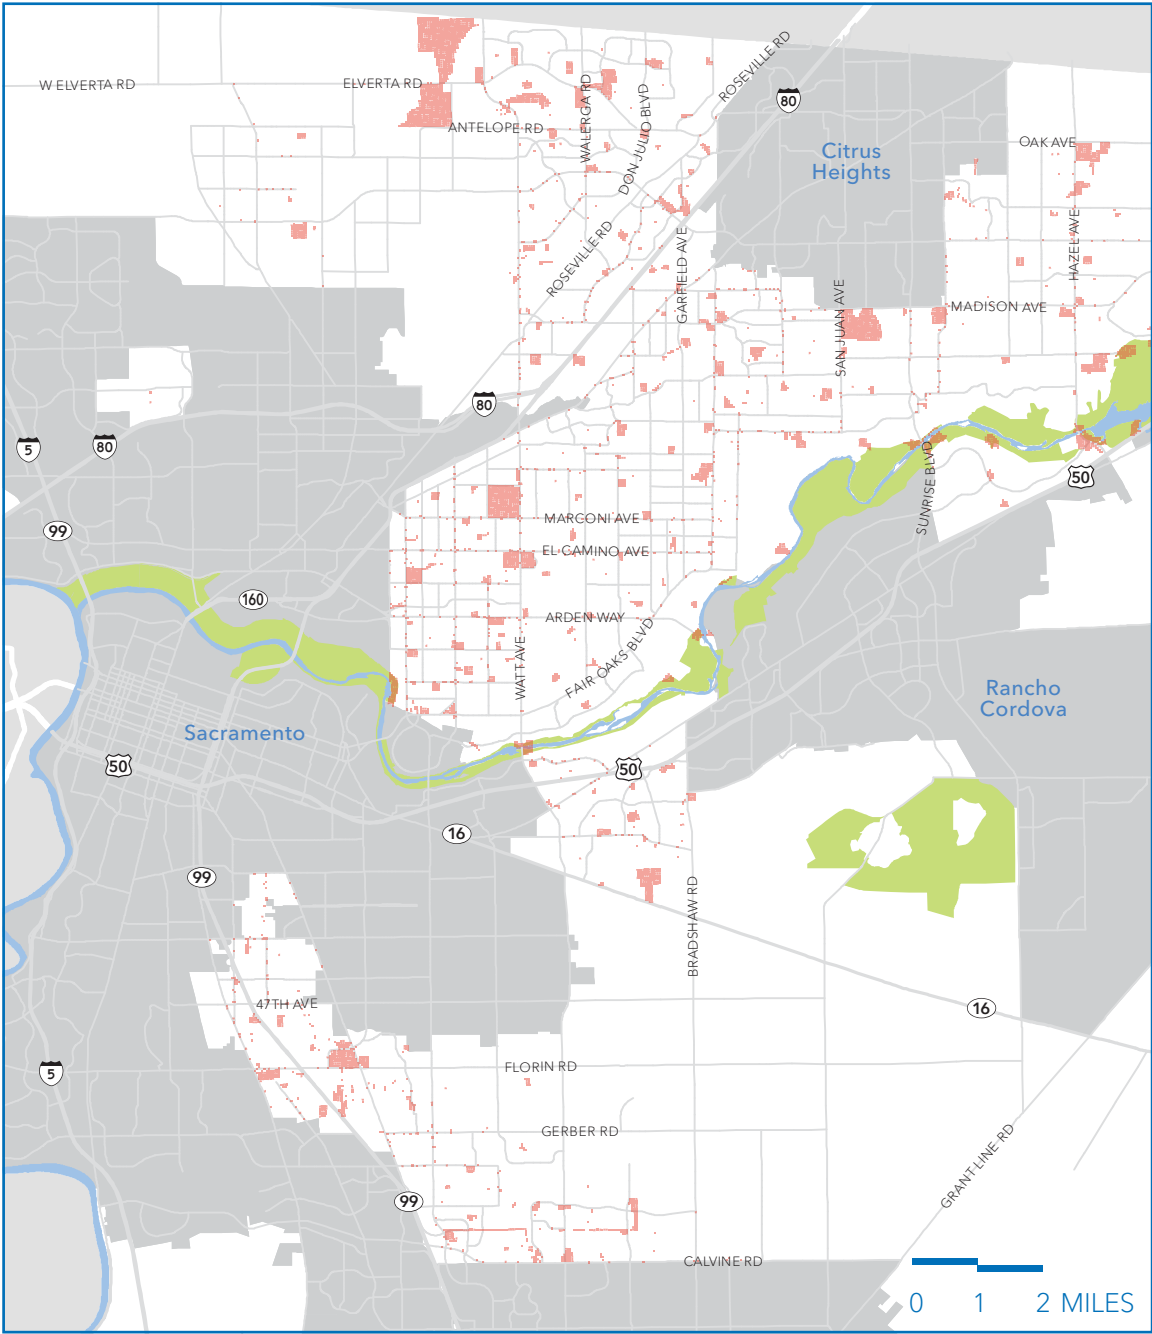

Table A-3. County Bicycle Parking Facility Requirements (Zoning Code)

Use	Bicycle Spaces		Bicycle Parking Facility Class	
	Long-Term	Short-Term	Long-Term	Short-Term
All commercial, mixed-use, and service uses not otherwise listed	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Dinner restaurants, cocktail lounges	One bicycle space for every 50 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Industrial	One bicycle space for every 50 vehicle spaces required or two spaces	0	Class I lockers, or Class II racks in an enclosed lockable area	N/A
Office and institutional uses within commercial and industrial zoning districts	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 60 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Institutional uses in other zoning districts	Bicycle parking shall be determined at the time of issuance of a Conditional Use Permit.			
Multiple Family	For multifamily housing, a minimum of one (1) bicycle parking space per unit shall be provided on-site, with guest bicycle parking spaces provided at one (1) space per 10 units on-site.		Class I lockers or Class II racks shall be located close to and with direct access to multifamily buildings entries. Bicycle parking for guests shall be clustered in common areas for easy convenience.	

# Equity: Does everyone have equitable access to walking and bicycle infrastructure?

## ENVIRONMENTAL JUSTICE COMMUNITY DEMOGRAPHICS

The Sacramento County Environmental Justice Element identifies the North Highlands/Foothill Farms, West Arden-Arcade, South Sacramento, and North Vineyard communities as disadvantaged compared to other parts of unincorporated County based on socioeconomic and environmental characteristics. The goals of identifying these communities is to ensure that the built environment provides an equitable degree of protection from environmental and health hazards and to encourage participation from all members of the community in the decision making process by addressing inequities that can lead to less participation from EJ communities.

Each of the identified communities has a unique character that must be considered when planning public outreach events and prioritizing projects and community investment

- While all of the EJ communities have a relatively similar land area, South Sacramento is a very dense community with 67,362 residents and North Vineyards is very low density with only 1,733 residents and primarily rural agricultural
- North Highlands and South Sacramento Communities have a higher percentage of persons under 20 while West Arden Arcade has a higher percentage of persons over 60
- While unincorporated Sacramento County has a significantly higher population of White residents when compared to California and the City of Sacramento, South Sacramento has a higher proportion of persons of Asian or Hispanic/Latino origin
- Spanish is the second most common primary language in EJ communities and occurs at a much higher rate than broader Sacramento County. Other common languages include Russian in North Highlands/Foothill

Farms, Hmong and Chinese in South Sacramento, and Vietnamese in North Vineyard

- Median Household income is much lower in EJ communities than in Sacramento County and especially when compared to non-EJ communities

## RELIANCE ON ALTERNATIVE TRANSPORTATION AND CONNECTIVITY

The Element focuses on access to healthy food (grocers with fresh produce, food banks, and Farmer's Markets) as a primary goal. It identifies West Arden Arcade and South Sacramento as the regions with the highest rates of food insecurity, representing limited or uncertain access to acquire acceptable food in socially acceptable ways. The policies relevant to this effort include urbanized communities having access to food sources within a quarter mile of transit.

Another focus area is opportunities for physical activity to combat obesity rates, which are highest in West Arden Arcade, North Highlands/Foothill Farms, and South Sacramento. Metrics include miles of Class I facilities per 1,000 residents, which are much lower in EJ communities than in non-EJ communities, and miles of Class II facilities per 1,000 residents, which are lowest in West

Arden-Arcade. North Vineyard has significantly higher density of Class II lanes than anywhere else in the County, however it also has the lowest occurrence of residences within a quarter mile of a park due to its agricultural context and low density. Metrics also includes rates of collisions involving people walking or riding bikes per 1,000 residents, which are higher in EJ communities than non-EJ communities. The relevant policies include requiring smart growth streets and encouraging safe, low stress environments for pedestrians and bicyclists in EJ communities.

# Safety: Can residents and visitors walk or bike safely and comfortably?

## SAFETY

Pedestrian and bicyclists comprise the most vulnerable road users, meaning they are more prone to higher injury severities in case of a collision. This level of vulnerability is a significant factor that affects their decision to use a motorized transportation mode if they perceive their safety and comfort is compromised. Research has also shown that one’s perception of safety and comfort contributes significantly to willingness to walk or bike. Specifically, walking and biking on busy roads and crossing busy urban intersections adjacent to high-speed vehicular traffic can easily deter people from walking and biking. Enhancing the safety and comfort perception of non-motorized road users can be attained by decreasing their interaction with vehicular traffic through improved infrastructure. Therefore, creating safer and more comfortable environment for walking and biking should be one of the main goals of the Active Transportation Plan.

A systemic-safety approach was used to identify trends for collisions involving people walking or biking throughout Unincorporated Sacramento County. This analysis reports on both the total number of collisions and collisions that result in a fatality or severe injury (KSI) as well as making use of the Equivalent Property Damage Only (EPDO)<sup>20</sup> method which provides an average severity score across different categories, allowing for direct comparison of collision types without comprehensive traffic volume data. This method is based on a weighting factor, as shown in Table A-4, to assign a severity score based on FHWA and Caltrans guidance. For more information on the methodology of the collision analysis, as well as a more detailed summary of the results, see the **Safety Analysis Report** after this summary.

Table A-4. EPDO Weighting Factor by Collision Severity

COLLISION SEVERITY		EPDO FACTOR
Fatal and Severe Injury	Signalized Intersection	120
	Non-Signalized Intersection	190
	Roadway	165
Injury (Other Visible)		11
Injury (Complaint of Pain)		6
Property Damage Only (PDO)		1

<sup>20</sup>2010 Highway Safety Manual (HSM)

# Bicycle and Pedestrian Collision Summary

A review of collision data in Unincorporated Sacramento County for the years 2015-2019 identified 50,832 collisions out of which 2,038 collisions involved someone walking or biking. The key trends and deficiencies identified from the analysis summarized in this document provide a direction of programs and improvements to consider as part of this Plan. A summary of these trends and deficiencies for collisions involving people walking and biking are as follows:

- Pedestrians are shown to be the most vulnerable users, with similar frequency of crashes but much higher crash severities
- The proportion of collisions involving people walking and biking happen ten times more frequently than the proportion of people commuting by walking or biking
- Many more collisions occur at intersections, however collisions occurring along segments are more severe both for people walking and biking
- Within school zones, collisions involving people walking and biking

result in less severe injuries, even more so for collisions involving school-age children

- The highest severity collisions involving people biking on a bicycle facility is at Class I roadway crossings

Table A-5 provides a summary of the number and severity of collisions base on mode and location type as well as a comparison to crashes that don't include people walking or biking.

Table A-5. Collision Frequency and Severity by Type (2015–2019)

COLLISION TYPE	FREQUENCY	KSI	EPDO	EPDO/COLLISION
Pedestrian Collisions	1,000	348	60,852	60.9
Bicycle Collisions	1,038	139	29,809	28.7
Vehicle Collisions	16,190	1,150	309,126	19.1

Using the EPDO score (which considers both frequency and severity of collisions) several heatmaps, segregated by the involved victim, i.e., pedestrian or bicycle, were created to help with identifying the most pedestrian and bicycle collision prone locations. These heatmaps are presented in the Safety Analysis Report. A visual inspection of the heatmaps was used to identify the corridors with the highest frequency and severity of collisions, both for collisions involving people walking and those involving people biking. These facilities were identified as high injury network (HIN) that warrant further investigation and improvements. The complete list of corridors and locations identified in the HIN are included in the Safety Analysis Report, however Table A-6 lists the top 10 locations for each victim category. Figure A-9 and Figure A-10 show the pedestrian and bicycle collisions heatmaps, respectively, in unincorporated Sacramento County. The color bands also show the HINs.

Table A-6. Collision Frequency and Severity by Type (2015–2019)

Location	EPDO/Collision
Pedestrian Collisions	
Roseville Road from Elkhorn Boulevard to Watt Avenue	121.5
Power Inn Road from Florin Road to Lenhart Road	103.8
El Camino Avenue from Ethan Way to Watt Avenue	80.1
Marconi Avenue from I-80 to Walnut Avenue	75.0
Greenback Lane from Fair Oaks Boulevard to Main Avenue	74.6
Intersection of Fair Oaks Boulevard and Watt Avenue	71.6
Fruitridge Road from Franklin Boulevard to Stockton Boulevard	67.0
Watt Ave from Q Street to Arden Way	66.4
Madison Avenue from Watt Avenue to Ruthland Drive	66.2
Arden Way from Ethan Way to Watt Avenue	63.9

Table A6. Collision Frequency and Severity by Type (2015–2019), continued

Location	EPDO/Collision
Bicycle Collisions	
Intersection of Elkhorn Boulevard and Sacramento Northern Bike Trail	190.0
47th Avenue from 27th Street to Stockton Boulevard	38.5
Elkhorn Boulevard from Watt Avenue to I-80	36.3
Watt Avenue from Elverta Road to Fair Oaks Boulevard	30.9
Power Inn Road from Florin Road to Calvine Road	28.3
Florin Road from Franklin Boulevard to Florin Perkins Rd	26.4
Marconi Avenue from Bell Street to Fair Oaks Boulevard	25.8
Franklin Boulevard from 38th Avenue to Florin Road	23.8
Fair Oaks Boulevard from Kenneth Avenue to Auburn Boulevard	23.7
Dewey Drive from Coyle Avenue to Will Rogers Drive	21.7

Figure A-10. Pedestrian Collisions Heatmap

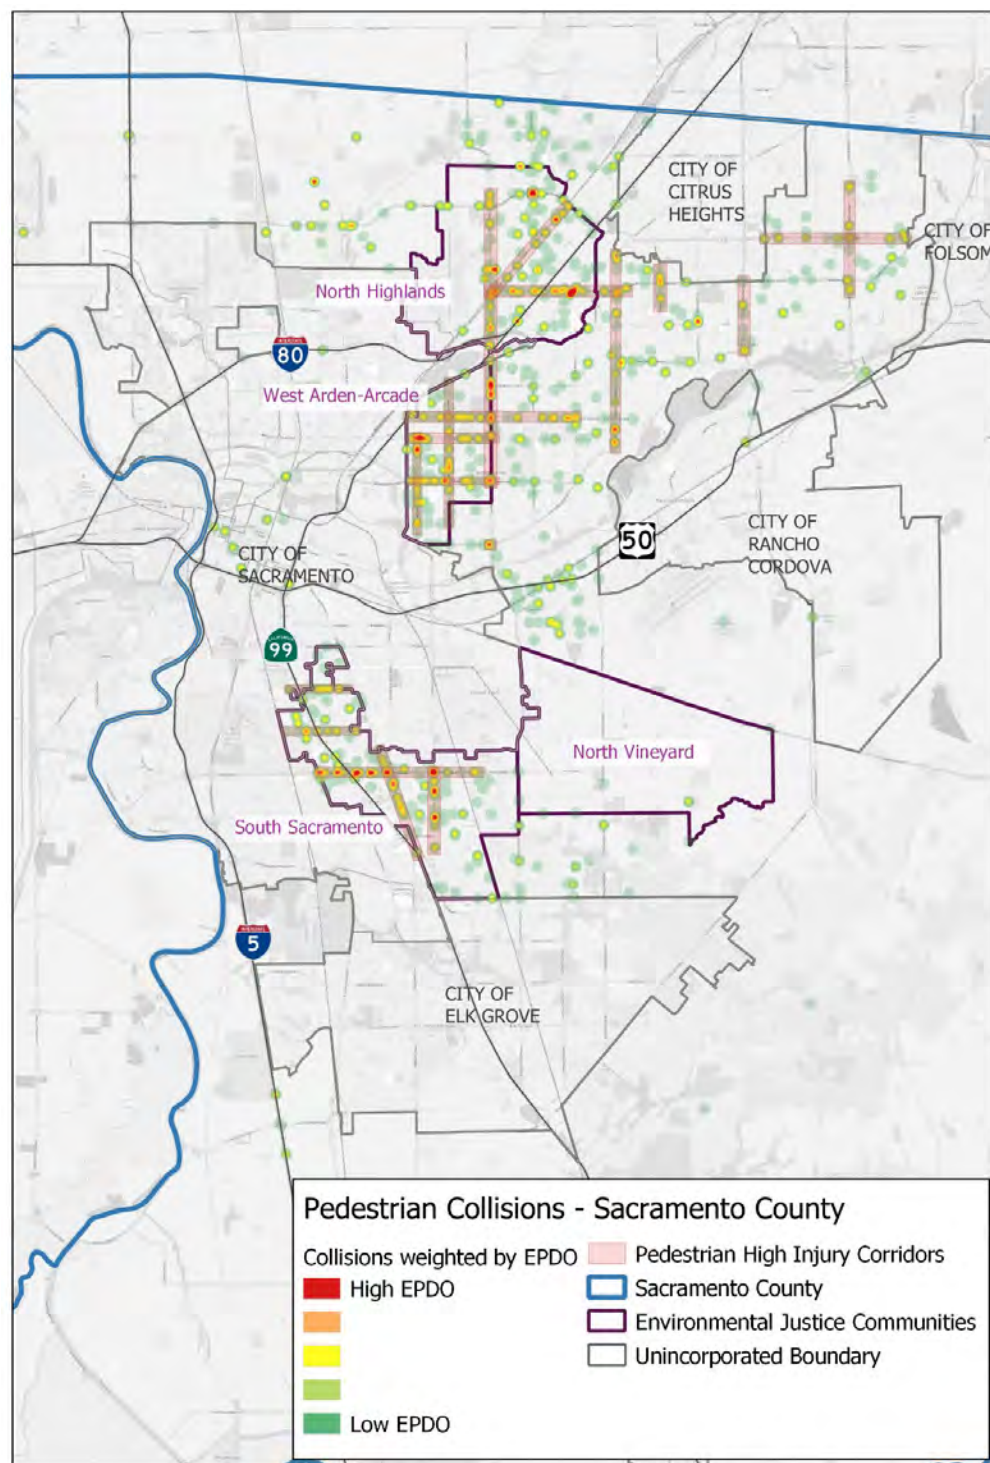

## Factors Affecting Collisions

Further analysis of the collision data highlighted two trends that warrant further study at specific locations and inclusion in the prioritization process. These included primary collision factors that were consistent across the county, and severity of collisions involving people biking on bicycle facilities. Additional details related to these conclusions as well as other trends studied can be found in the Safety Analysis Report.

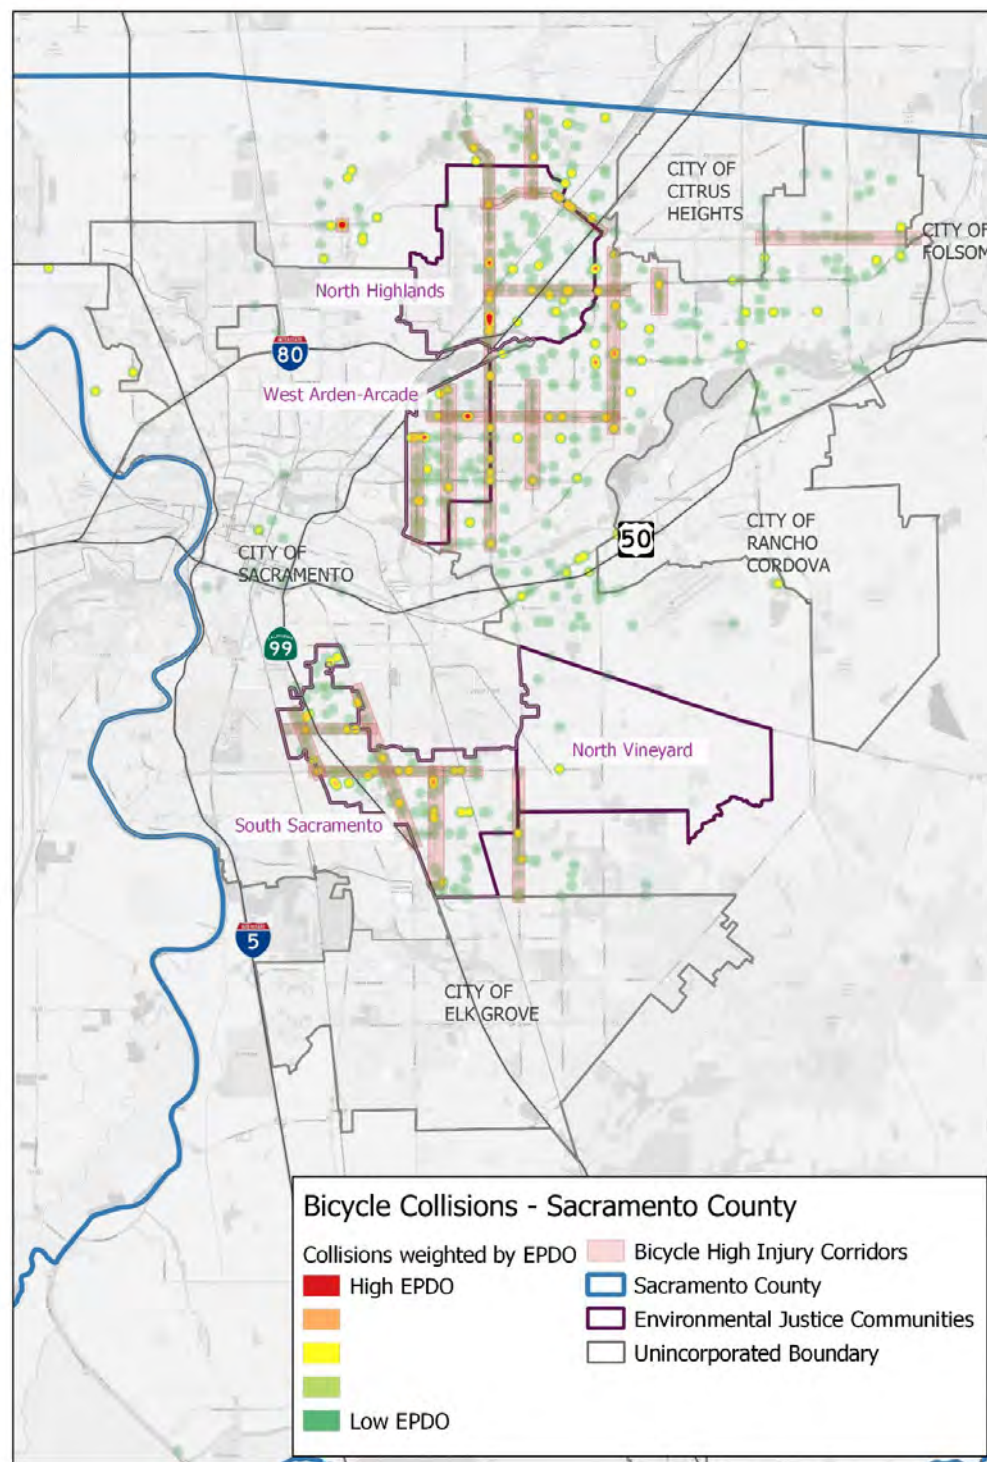

### CONTRIBUTING CRASH FACTORS

One of the primary tools in diagnosing crash records to determine some level of connection to the built environment, environmental conditions, and human behavior is primary collision factor(s).

Pedestrian violations (people walking failing to yield right of way to other vehicles while outside of a legal crosswalk) and pedestrian right-of-way (driver failing to yield right of way

to a pedestrian at a legal crosswalk) were the most frequent contributing factors for collisions involving someone walking in the study area. People failing to yield to vehicles outside of a legal crosswalk was by far the most frequent cause of collisions involving people walking regardless of the collision location, occurring more often than the next four primary causes combined in all scenarios and location types. In comparison, riding on the wrong side of the road (biking against the main direction of traffic) and improper turning (making an unsafe turning movement, or failure to signal) were found as the most frequent contributing factors to collisions involving someone biking. Riding on the wrong side of the road occurring more often than the next five primary causes combined at signalized intersections and the next three primary causes combined along segments. At unsignalized intersections, while riding on the wrong side of the

road was still the most frequent primary cause, however improper turning and impinging on the automobile right of way also significantly contributed as primary collision factors.

It is also important to recognize that unsafe speed resulted in the highest average severity collisions involving people walking at intersections and the second highest average severity along segments. The same results were not replicated for collisions involving people riding bikes, with unsafe speed only having the highest average severity along segments and having lower occurrence at intersections.

**COLLISIONS ON BICYCLE FACILITIES**

When looking at the frequency and KSI of the collisions that occur on bicycle facilities (Table A-6), 93% of those collisions and 87% of KSI occur on Class II bike lanes, but collisions occurring on Class I or Class III facilities have a much higher average severity. Class I bike paths, which are completely separated from vehicle traffic, show the

highest average severity. The collision locations on these facilities showed that these collisions happened where the bike path crosses the roadway, highlighting improved trail crossings as a specific need. Given these collisions being right-angle collisions and at higher speeds, they would tend to be more severe. Moreover, the average EPDO for collisions involving people biking on Class II bike lane is almost half of the average EPDO for collisions involving people biking on bike routes. Studies have also shown that physically separated bikeways improve road safety for not only bicyclists, but all road users. This finding has been attributed to the fact that roadways with separated bikeways have lower vehicles speeds, which means, in the case of a collision, the resulting severity would be lower.

# Appendix A-2: Safety Analysis Report

Item 6 - Draft Active Transportation Plan

## Introduction

This report provides a summary of the collision trends involving people walking and biking and high-risk locations within unincorporated Sacramento County. The analysis includes collision data trends analysis in the study area, spatial analysis of the collisions involving people walking or biking, and the identification of roadways and intersections showing a safety need associated with pedestrians and bicycles, better known as High Injury Network (HIN). The analysis presented in this study used the collision data through the Transportation Injury Mapping System (TIMS).

The purpose of this memorandum is to define the baseline safety conditions to identify trends and patterns found in both locations and types of collisions. This will be used to develop counter-measures and projects that will address deficiencies and improve safety for multimodal travel.

## Summary of Historic Trends and Identified Deficiencies

The key trends and deficiencies identified from the analysis summarized in this document provide a direction of programs and improvements to consider as part of this Plan. A summary of these trends and deficiencies for collisions involving people walking and biking are as follows:

- Pedestrians are shown to be the most vulnerable users, with similar frequency of crashes to those involving people bicycling, but much higher crash severities
- The proportion of collisions involving people walking and biking happen ten times more frequently than the proportion of people commuting by walking or biking
- Three times as many collisions occur at intersections, however collisions occurring along segments are more severe both for people walking and biking
- Within school zones, collisions involving people walking and biking result in less severe injuries, even more so for collisions involving school-age children
- While very rare, the highest severity collisions involving people biking on a bicycle facility is at Class I roadway crossings that lack protective improvements such as RRFB/HAWK signals

# Data Collection and Methodology

## OVERVIEW OF COLLISION DATA

The raw collision data was retrieved from the Transportation Injury Mapping System (TIMS) for the most recent five-year time period available (1/1/2015-12/31/2019). The dataset includes a multitude of information for each collision, including date, time, location, traffic control, weather, severity, primary collision factor, lighting, and CHP notes. While TIMS provides the data for injury and fatality collisions (Property Damage Only – or PDO collisions are not addressed in TIMS), a review of collisions involving people walking or biking shows that the majority of them are no-PDO, hence TIMS database can be used instead of the Statewide Integrated Traffic Records System (SWITRS), which incorporates PDO collisions. Notably, our investigation of the collisions involving people walking or biking in Sacramento showed that less than 1% of collisions involving people walking or biking are PDO. Given that, TIMS

data was found to be sufficient for this level of analysis. All collisions were classified as intersection or segment collisions based on the distance to the nearest intersection. According to the California Local Road Safety Manual (LRSM) and the influence area of the intersections, collisions within 250 feet of an intersection were considered intersection collisions, and all collisions farther than 250 feet from an intersection were considered segment collisions.

## ANALYSIS APPROACH

There are many methods of analyzing crash records to identify systemic trends and patterns as well as priority locations in need of improvements. One important metric to consider is which locations have the highest number of collisions occur, especially the ones that result in the victim being killed or severely injured (KSI). However, it is also important to look for systemic trends that may reveal physical, environmental, or behavioral characteristics that can

lead to insights about where broader ranging policies or programs can be applied to reduce crash occurrences or severity.

This analysis reports on both the total number of collisions and KSI as well as making use of the Equivalent Property Damage Only (EPDO)<sup>21</sup> method which provides an average severity score across different categories, allowing for direct comparison of collision types without comprehensive traffic volume data. The severity score is based on aggregating an EPDO factor that represents the societal and economic cost of different crash severities<sup>22</sup> with values shown in Table A-7. These cost estimates include the monetary losses associated with medical care, emergency services, property damage, lost productivity, and the like, to society as a whole. When summarized across locations (hotspots), collision type, driver behavior, or

<sup>21</sup>2010 Highway Safety Manual (HSM)

<sup>22</sup>Caltrans Local Roadway Safety Manual, Appendix D, April 2020

roadway characteristics, time of day, or environmental conditions can help compare and contrast trends and identify high priority collision characteristics. It should be noted that the EPDO score for collisions involving people walking and biking were determined by the level of injury sustained by the pedestrian or bicyclist. For the other collisions, the EPDO was determined by the highest level of injury sustained by the involved vehicles’ occupants.

Table A-7. EPDO Weighting Factor by Collision Severity

COLLISION SEVERITY		EPDO FACTOR
Fatal and Severe Injury	Signalized Intersection	120
	Non-Signalized Intersection	190
	Roadway	165
Injury (Other Visible)		11
Injury (Complaint of Pain)		6
Property Damage Only (PDO)		1

For this project and most other safety analyses, the collision severity is defined in the HSM as follows:

- Fatal injury: A collision that results in the death of a person within 30 days of the collision.
- Severe (incapacitating) injury: A collision that results in broken bones, dislocation, severe lacerations, or unconsciousness, but not death.
- Other visible (non-incapacitating) injury: A collision that results in other visible injuries, including minor lacerations, bruising, and rashes.
- Possible injury (complaint of pain): A collision that results in the complaint of non-visible pain/injury, such as confusion, limping, and soreness.
- Property damage only (PDO): A collision without injury or complaint of pain but resulting in property damage to a vehicle or other object, commonly referred to as a “fender bender.”

- PDO collisions do not include mechanical issues, such as a flat tire unless the failure results in a collision with another vehicle or object.

For each category of crash descriptors, a summary is provided that includes five-year total of crashes (frequency), KSI, total EPDO, and average EPDO by collision. This approach identified collision patterns for each mode (pedestrian and bicycle) compared to crashes involving all vehicles, resulting in a list of priority locations with a history of those collision types. The list of priority locations was further supplemented through hotspot analysis, which identified intersections and corridors with high KSI and/or EPDO scores (high frequency and/or severity of collisions) and EPDO per collision (high average severity across collisions).

The following sections summarize the key findings of the safety analysis as well as high-risk network or HINs.

# Overview of Countywide Injury Collision Trends

This section summarizes the injury collision trends and patterns in unincorporated Sacramento County and, specifically focusing on collisions involving people walking and biking. In total, 2,038 collisions involving injury to someone walking or biking occurred in unincorporated Sacramento County between January 1, 2015, and December 31, 2019. Of these collisions, 1,000 involved a vehicle colliding with someone walking<sup>23</sup>, 1,038 involved a collision between a vehicle and someone biking. A summary of the frequency and relative severity of these collisions is presented in Table A-8. As can be seen in this table, while the number collisions involving people walking or biking over the five-year period are similar, the resulting EPDO (or average severity) of a collision involving someone walking is more than twice as severe than a collision

involving someone biking, and more than three times as severe as compared to the average severity across all injury crashes.

A review of the 2018 Five-Year American Community Survey (ACS) shows that a large majority (88.7%) of unincorporated Sacramento County residents commute by driving, either alone or in a carpool, while only 1.7% commute by transit, 0.9% commute by walking, and 0.4% commute by biking. Looking deeper at the collisions by only assessing severe injury and fatal collisions, 1,637 severe injury and fatal collisions happened during this period, out of which 487 involved either a pedestrian or a bicyclist. That is, while approximately one out of every nine injury collisions involve someone walking or riding a bike, the proportion increases to almost one out of every three for severe injury and fatal collisions. This disproportionate share, as shown in Figure B-11, illustrates the vulnerability of

pedestrians and bicyclists compared to other road users which, in turn, necessitates proper investigation of collisions involving people walking or biking and countermeasure development.

<sup>23</sup>One collision occurred between someone walking and someone biking, given that the person walking was more severely injured than the person biking, it was categorized with the other collisions involving people walking.

Table A-8. Injury Collision Frequency and EPDO by Type (2015–2019)

COLLISION TYPE	FREQUENCY	KSI	EPDO	EPDO/COLLISION
Pedestrian Collisions	1,000	348	60,852	60.9
Bicycle Collisions	1,038	139	29,809	28.7
Vehicle Collisions	16,190	1,150	309,126	19.1

Figure A-16. Comparison of Commute Mode Split to Proportion of Injury Crashes

**COLLISION LOCATION**

Further analysis was conducted to investigate the effect of collision location, i.e., segment versus intersection, on the frequency and severity of collisions involving people walking or biking, as represented by the average EPDO score. Table A-9 presents the collision frequency, EPDO scores, and average EPDO score per collision for each collision type and location for unincorporated Sacramento County.

The results reveal several important trends and possible causes:

- Far more collisions involving people walking or biking (approximately 3 times as many) occur at intersections as compared to segments. This is likely due to the increased number of potential conflict points where vehicles and people walking or biking can interact.
- While many more collisions occur at intersections, the severity of injuries incurred along segments is slightly higher, potentially due to increased vehicle speed
- Based on the average severity (EPDO), collisions involving people walking have twice the severity level as collisions involving people biking and more than three times the average severity level over all crashes
- Despite the commute mode share for walking (0.9%) being more than twice of that for bicycling (0.4%), the frequency of crashes between the two are very similar. This could have two potential causes or a combination: being that bicycle trips are often longer, leading to more exposure, as well as bicycle are more often operating within the same right-of-way as cars.

Table A-9. EPDO Scores for Intersections And Segments

COLLISION TYPE	SEGMENT				INTERSECTION			
	Freq.	KSI	EPDO	EPDO/Col.	Freq.	KSI	EPDO	EPDO/Col.
Pedestrian Collisions	262	107	18,990	72.5	738	241	41,862	56.7
Bicycle Collisions	253	38	8,085	23.0	785	101	21,724	27.7
Vehicle Collisions	6,453	542	142,833	22.1	9,727	608	166,292	17.1

CONTRIBUTING FACTORS PER LOCATION

One of the primary tools in diagnosing crash records to determine some level of connection to the built environment, environmental conditions, and human behavior is primary collision factor(s), which is recorded by the reporting officer. It is however important to recognize that this is not a description of blame or fault, which is specifically not included in crash records.

Figure A-12 and Figure A-13 show the location, contributing factors, and associated average EPDO scores of

the studied collisions involving people walking or biking, respectively, in unincorporated Sacramento County. Pedestrian violations (people walking failing to yield right of way to other vehicles while outside of a legal crosswalk) and pedestrian right-of-way (driver failing to yield right of way to a pedestrian at a legal crosswalk) were the most frequent contributing factors for collisions involving someone walking in the study area. People failing to yield to vehicles outside of a legal crosswalk was by far the most frequent cause of collisions involving people walking regardless of the collision

location, occurring more often than the next four primary causes combined in all scenarios and location types. In comparison, riding on the wrong side of the road (biking against the main direction of traffic) and improper turning (making an unsafe turning movement, or failure to signal) were found as the most frequent contributing factors to collisions involving someone biking. Riding on the wrong side of the road occurring more often than the next five primary causes combined at signalized intersections and the next three primary causes combined along segments. At unsignalized intersections,

Figure A-17. Collision Location and Contributing Factor - Pedestrian Collisions

UNINCORPORATED SACRAMENTO COUNTY

Pedestrian — Collision Trends

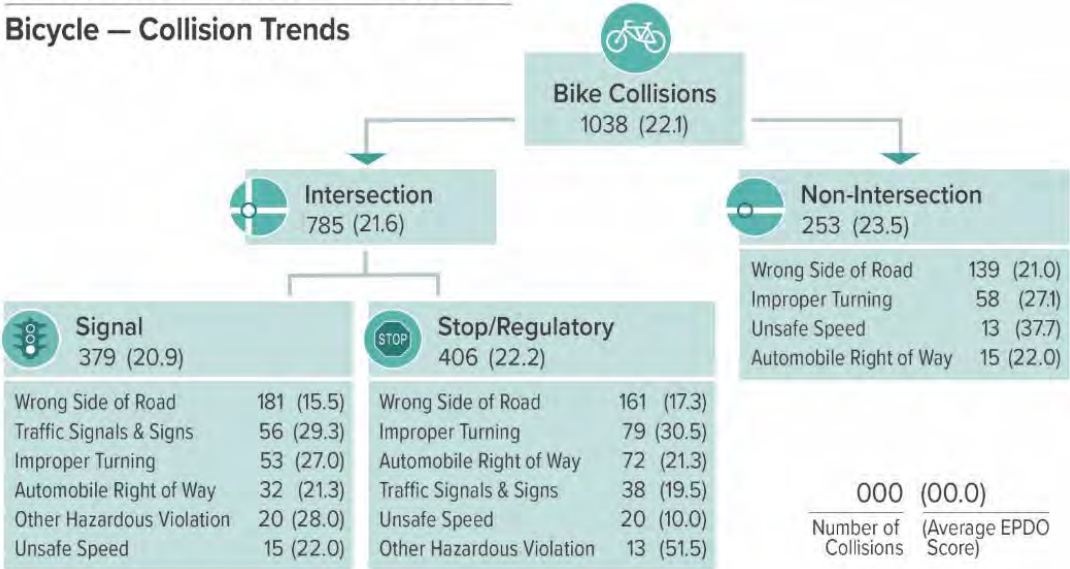

while riding on the wrong side of the road was still the most frequent primary cause, however improper turning and impinging on the automobile right of way also significantly contributed as primary collision factors.

Given the large proportion of crashes associated with pedestrian violations and biking against traffic, later chapters will explore how this trend might be addressed systemically with educational and outreach programs in combination with physical infrastructure that provides safer alternatives.

Figure A-18. Collision Location and Contributing Factor - Bicycle Collisions

UNINCORPORATED SACRAMENTO COUNTY

Bicycle — Collision Trends

It is also important to recognize that unsafe speed resulted in the highest average severity collisions involving people walking at intersections and the second highest average severity along segments. The same results were not replicated for collisions involving people riding bikes, with unsafe speed only having the highest average severity along segments and having lower occurrence at intersections.

TIME OF DAY AND LIGHTING

Table A-10 summarizes the pedestrian and bicycle EPDO scores for the time of day and lighting conditions in unincorporated Sacramento County. This table shows that the average EPDO score for collisions involving people walking is significantly higher at night (more than doubled compared with the average EPDO score during daylight condition). A similar observation is made for the collisions including people biking, while the average

EPDO score is less pronounced. For the sake of comparison, the average EPDO (severity) for injury collisions in unincorporated Sacramento County are also provided in this table. Based on these figures, the average EPDO scores for vehicle collisions is less variable for different lighting conditions (i.e., 16.2~33.1) while a strong variability of average EPDO scores for collisions involving people walking or biking as a function of lighting is noticeable (i.e., 25.6~52.5 for collisions including

people biking and 35.3~91.2 for collisions including people walking). The possible explanation for this finding is that during these periods, traffic on roadways is lower than other time intervals during the day. The lower volumes can lead to riskier behavior (e.g., crossing at non-crosswalk locations, riding in the middle of the roadway) while darker conditions and higher speeds can reduce visibility for drivers, increasing the likelihood of severe injuries during darkness.

Table A-10. EPDO Scores by Time of Day/ Lighting

COLLISION TYPE	SEGMENT			INTERSECTION			INTERSECTION			INTERSECTION		
	Freq.	KSI	EPDO/ COL.	Freq.	KSI	EPDO/ Col.	Freq.	KSI	EPDO/ Col.	Freq.	KSI	EPDO/ Col.
Pedestrian Collisions	145	77	91.2	351	181	83.3	471	82	35.3	31	8	47.4
Bicycle Collisions	61	16	52.5	195	33	31.9	747	84	25.6	34	6	35.7
Vehicle Collisions	1,359	199	33.1	3,221	301	22.6	11,089	608	16.2	491	42	21.8

WEATHER CONDITIONS

Based on the collision analysis shown in Table A-11, the majority of collisions involving people walking or biking happened during clear/cloudy weather conditions. As can be seen in this table, the average EPDO score per pedestrian and bicycle collision is slightly higher during precipitation times compared with clear/cloudy weather conditions while for vehicles this trend is reversed.

However, the difference is not significant enough to highlight the role of weather on increased pedestrian and bicycle injury severity. Although, this slight increase in average EPDO score can be attributed to several factors such as reduced visibility of drivers, slick streets, and tendency towards mid-block crossing (pedestrian violation). Moreover, people are less likely to walk and bike during the rain, hence the

lower numbers of collisions. However, those who walk/bike in the rain are likely the most vulnerable people who do not have any other alternative transportation option. Given this observation, weather conditions were not found to be a significant contributing factor to collisions involving people walking or biking and not investigated further.

Table A-11. EPDO Scores by Weather

COLLISION TYPE	CLEAR/CLOUDY				PRECIPITATION			
	Freq.	KSI	EPDO	EPDO/COI.	Freq.	KSI	EPDO	EPDO/Col.
Pedestrian Collisions	979	339	59,430	60.7	21	9	1,422	67.7
Bicycle Collisions	1,026	137	29,439	28.7	12	2	370	30.8
Vehicle Collisions	15,664	1,125	301,080	22.9	464	18	6,502	14.0

Table A-12. EPDO Scores – Pedestrian and Bicycle Collisions within School Zones

	Frequency	KSI	EPDO	EPDO/Collision
PEDESTRIAN COLLISIONS				
Total	1,000	348	60,852	60.9
Within School Zone (All)	373	112	20,416	54.7
Within School Zone (Under 18)	116	21	4,080	35.2
BICYCLE COLLISIONS				
Total	1,038	139	29,809	28.7
Within School Zone (All)	372	52	11,050	29.7
Within School Zone (Under 18)	111	6	2,030	18.3

**PEDESTRIAN AND BICYCLE COLLISIONS WITHIN SCHOOL ZONES**

School zones are known destinations for pedestrians and bicyclists, specifically those aged 18 and younger. For this study, and based on the legal definition, a school zone is an area within almost a quarter-mile of the school property. The locations of all schools in the unincorporated Sacramento County were obtained and a buffer of a quarter-mile was plotted around the schools and all the collisions involving people walking or biking falling in those buffers were identified. Table A-12

summarizes the finding of this analysis. When comparing severity by age group for collisions involving people walking or biking within school zones, children walking and biking within school zones saw lower severity injuries on average. A review of the crash times reveals that the majority of collisions involving school age children walking or biking happen during the periods of 7-9 am and 3-5 pm, when children are arriving at or leaving the schools, respectively. This may be a result of increased congestion from drop-off/pick-up, or increased vigilance due to changed signage and striping within school zones. However,

collisions involving adults walking and biking are more prevalent and spread throughout the afternoon.

SCHOOLS WITH HIGHER SEVERITY COLLISIONS

Following the analysis in the previous section, all the schools in the unincorporated Sacramento County were further investigated based on the number of collisions involving school aged people walking or biking as well as the average EPDO per collision. Table A-13 summarizes the collision statistics for the 10 schools with the highest collision frequency and severity. A complete list of the schools is provided in Appendix A-3 and Appendix A-4.

BICYCLE COLLISIONS ON BICYCLE FACILITIES

To assess the frequency and severity of collisions involving people biking on roadways with and without any bicycle infrastructures, the bicycle facility map of the unincorporated Sacramento County was obtained. Frequency and EPDO scores of all the collisions involving people biking on these facilities were calculated. The summary of this analysis is presented in Table A-14. As can be seen in this table, just as many collisions involving people biking

Table A-13. Schools with the Highest Severity Crashes

School	Frequency	EPDO	EPDO/Collision
David Reese Elementary	5	408	81.6
James Rutter Middle	5	408	81.6
Del Campo High*	9	437	48.6
Will Rogers Middle*	9	437	48.6

Highlands High	13	108	8.3
Hillsdale Elementary	13	108	8.3

\*These schools are grouped in one location

occur on bicycle facilities as occur otherwise, and with similar average severity. This means, on average, the presence of bicycle facilities does not reduce the bicycle collision severity. However, when looking at the frequency and KSI of the collisions the occur on

bicycle facilities, 93% of those collisions and 87% of KSI occur on Class II bike lanes, but collisions occurring on Class I or Class III facilities have a much higher average severity. According to Table A-14, collisions on Class I bike paths, which are completely separated from

vehicle traffic, were very rare but show the highest average severity when they occur where the bike path crosses the roadway. Given these collisions being right-angle collisions and at higher speeds, they would tend to be more severe, which highlights improved trail crossings as a specific need. Moreover, the average EPDO for collisions involving people biking on Class II bike lane is almost half of the average EPDO for collisions involving people biking on bike routes. Studies have also shown that physically separated bikeways improve road safety for not only bicyclists, but all road users. This finding has been attributed to the fact that roadways with separated bikeways have lower vehicles speeds, which means, in the case of a collision, the resulting severity would be lower.

Table A-14. EPDO Scores – Bicycle Collisions and Bicycle Infrastructure

	Frequency	KSI	EPDO	EPDO/Collision
Total Bicycle Collisions	1,038	139	29,809	28.7
Bicycle Collisions on All Bicycle Facilities	476	62	13,504	28.4

Class II – Bike Lane	447	54	11,818	26.4
Class III – Bike Route	26	6	1,300	50.0
Bicycle Collisions not on a Bicycle Facility	562	77	16,305	29.0

# Collision Trends at Environmental Justice Areas

A review of crash types, frequency, and severity of collisions in the Environmental Justice (EJ) areas was performed to ensure that sufficient investment was directed towards improving any safety deficiencies of those areas proportional to need. Overall, the North Vineyard area had a very low occurrence of collisions involving people walking or biking, due to low density and geography of the area. The other three areas all had comparable collision frequency and severity for collisions involving people walking and biking. The Environmental Justice Element also provides a comparison of Bike and Pedestrian collision rates per 1,000 residents<sup>24</sup>, showing that Non-EJ areas have the lowest collision rate with North Vineyard having a collision rate only slightly higher. South Sacramento however has a rate almost twice as high as non-EJ areas and North Highlands and West Arden-Arcade both have a rate more than twice that of non-EJ areas.

<sup>24</sup>Sacramento County Environmental Justice Element (2019), Figure 11

## NORTH HIGHLANDS/FOOTHILL FARMS

Figure A-14 and Figure A-15 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the North Highlands/Foothill Farms EJ area. Pedestrian violations and right-of-way, as well as unsafe speed, were the most frequent contributing factors to pedestrian collisions in this EJ, regardless of the collision location. In contrast, biking on the wrong side of the road as well as improper turning were found as the most frequent contributing factor to collisions involving people biking.

## NORTH VINEYARD

Figure A-16 and Figure A-17 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the North Vineyard EJ area. The number of collisions involving people walking or

biking in this EJ is not significant to help us draw a rigorous conclusion. However, pedestrian violations and unsafe speed were found to contribute to pedestrian collisions while improper turning was the most prevalent contributing factor to collisions involving people biking.

## SOUTH SACRAMENTO

Figure A-18 and Figure A-19 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the South Sacramento EJ area. Pedestrian violations and right-of-way, as well as unsafe speed, were the most frequent contributing factors to pedestrian collisions in this EJ, regardless of the collision location. In contrast, traffic signals and signs, improper turning, and automobile right-of-way were found as the most frequent contributing factors to bicycle-involved collisions.

## WEST ARDEN-ARCADE

Figure A-20 and Figure A-21 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the West Arden-Arcade EJ area. Pedestrian violations and right-of-way were the most frequent contributing factors to pedestrian collisions in this EJ, regardless of the collision location. In contrast, bicycling on the wrong side of the road, improper turning, and automobile right-of-way were found as the most frequent contributing factors to bicycle-involved collisions.

# High Injury Network Identification

Using the EPDO score (which considers both frequency and severity of collisions) several heatmaps, segregated by the involved victim, i.e., pedestrian or bicycle, were created to help with identifying the HIN. These heatmaps are presented in Figure A-22 through Figure A-31. Color bands in these figures show the identified HINs. According to the analysis and the heatmaps, several facilities, as summarized in Table A-15 and Table A-16 for collisions involving people walking or biking HINs, respectively, were identified to warrant further investigation and improvements.

Figure A-27. Pedestrian Collisions Heatmap - Section 1

Figure A-34. Bicycle Collisions Heatmap - Section 3

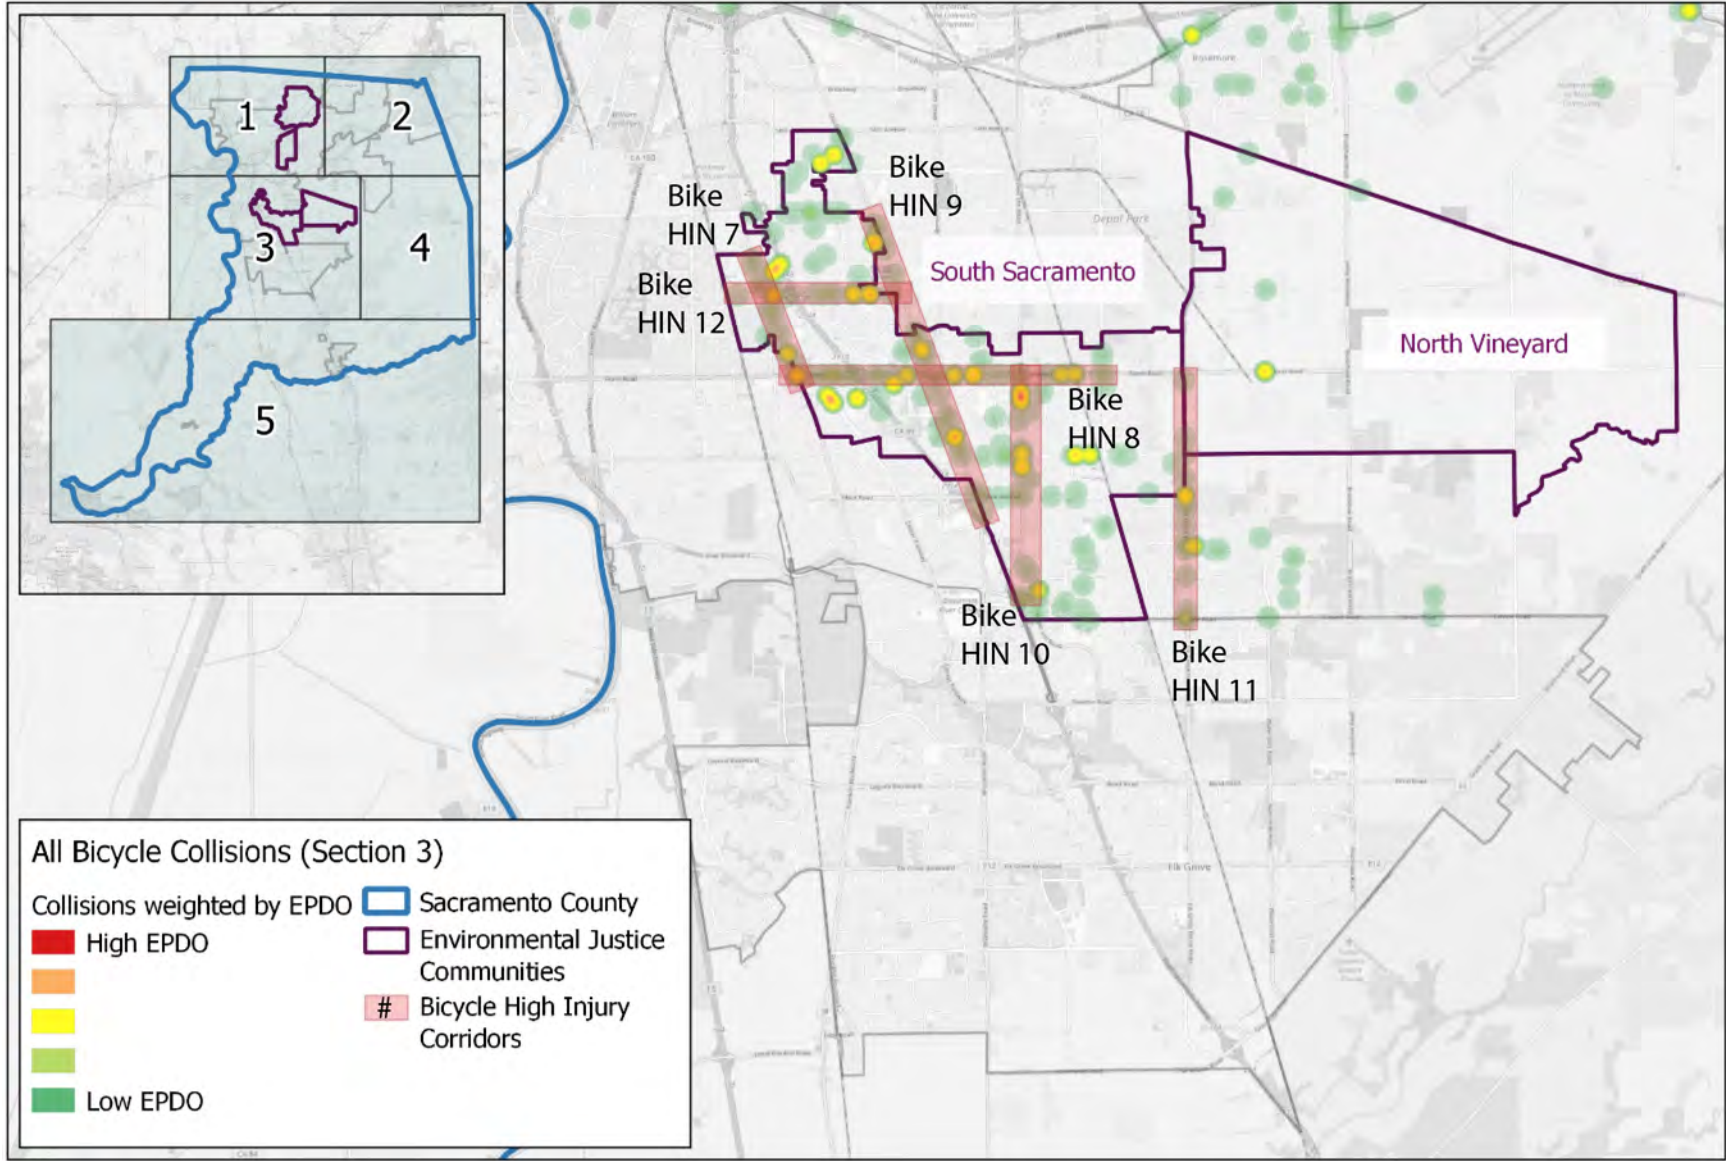

Figure A-35. Bicycle Collisions Heatmap - Section 4

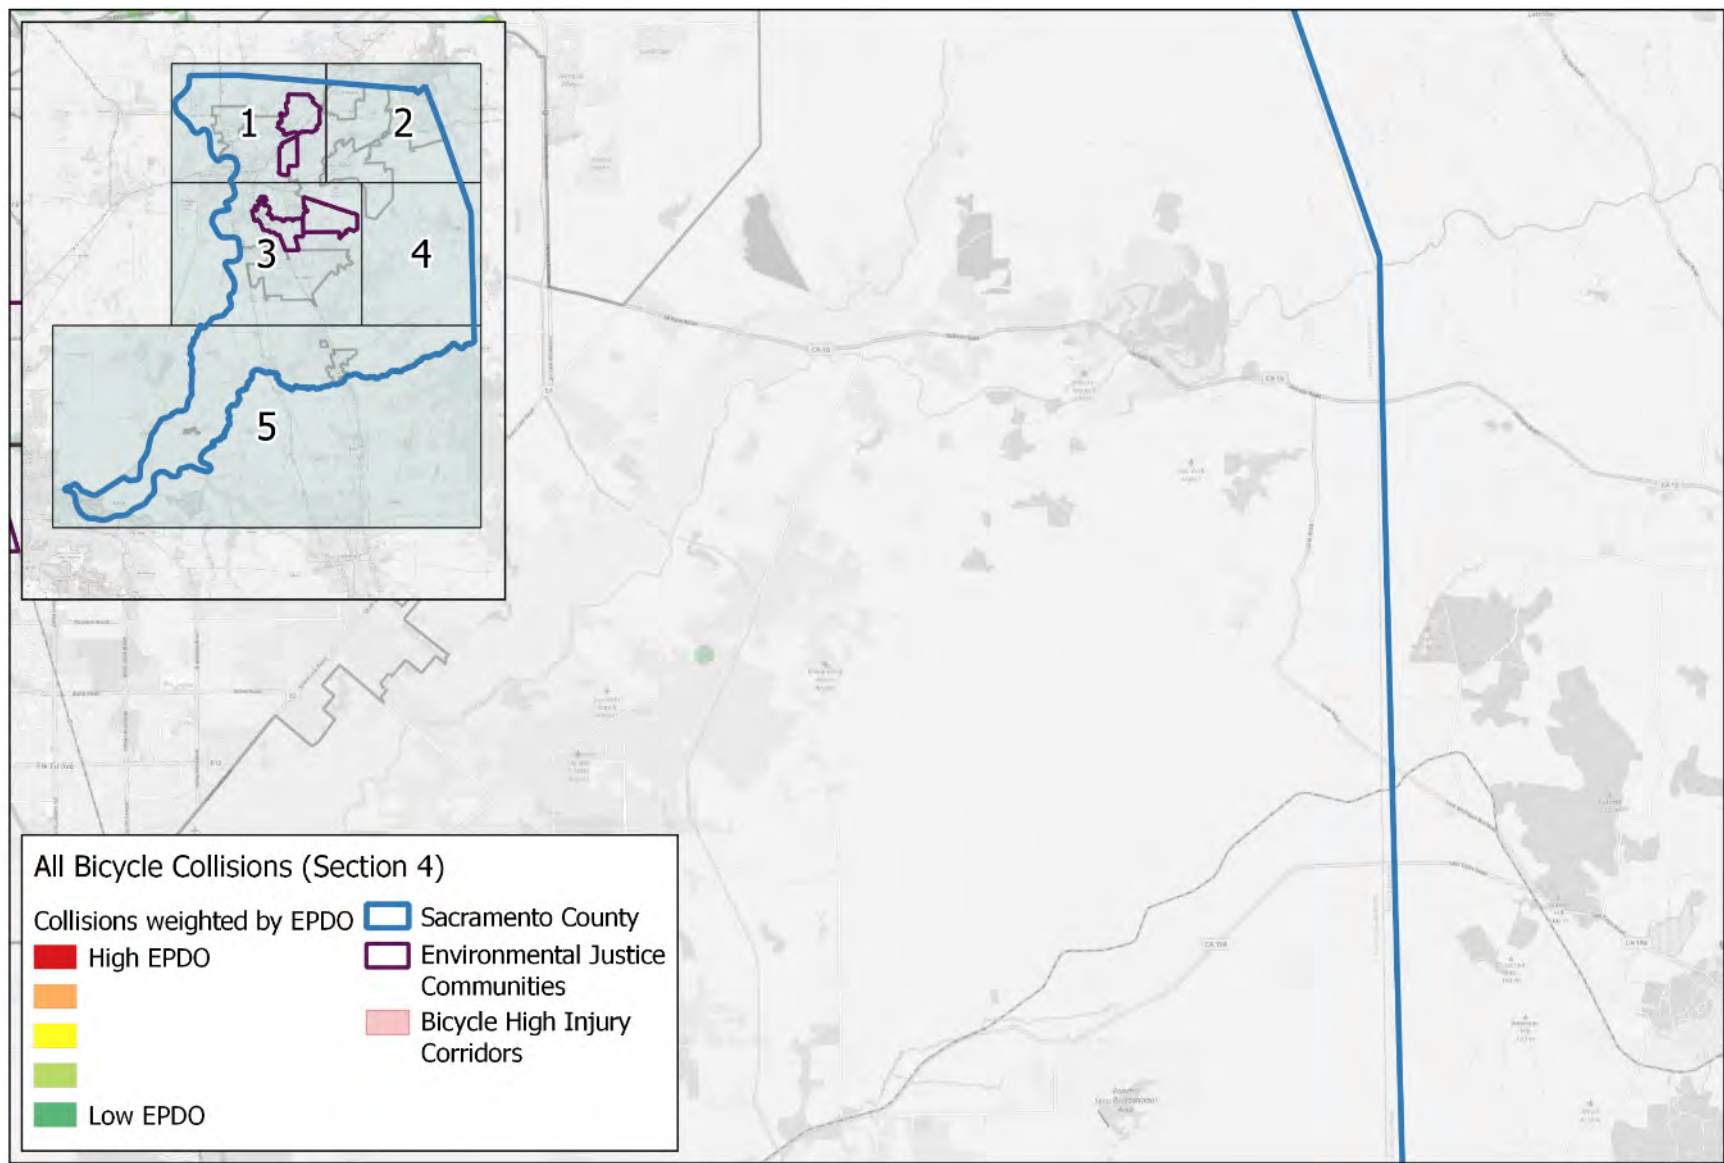

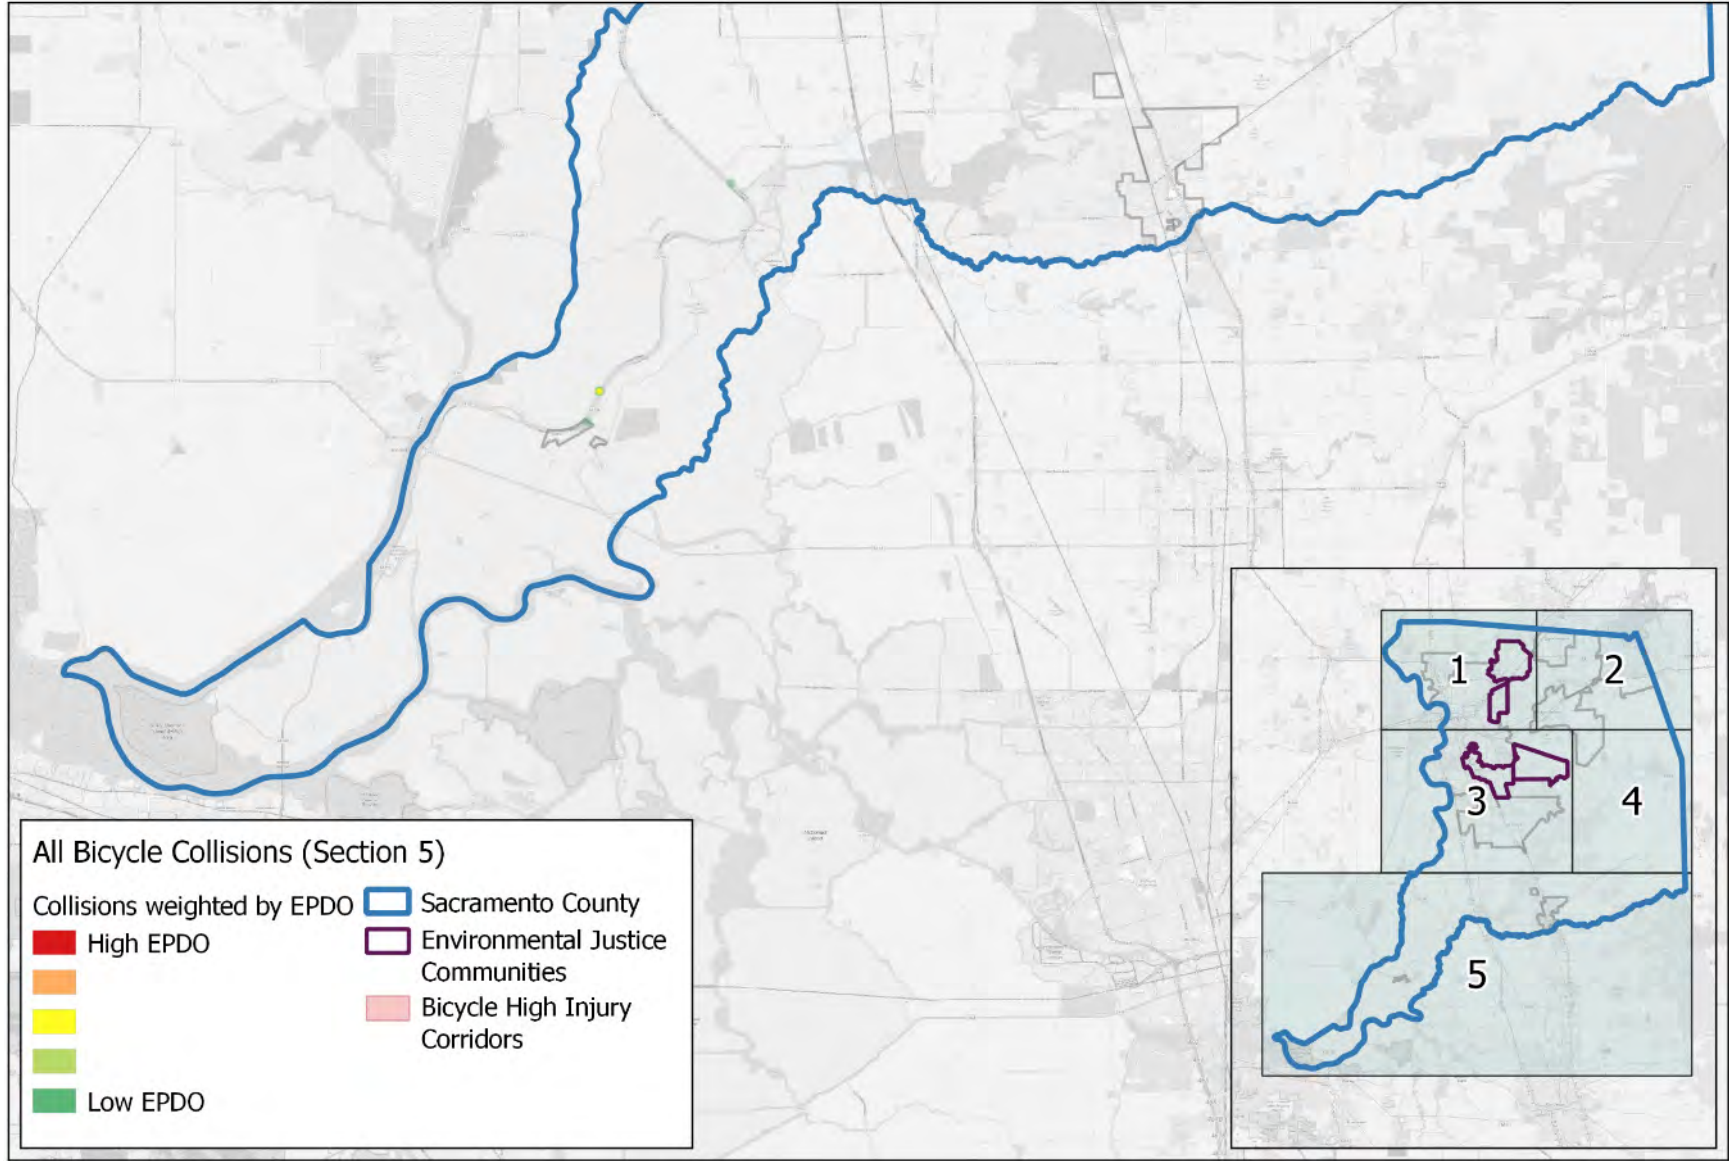

Figure A-36. Bicycle Collisions Heatmap - Section 5

The following tables summarize the number and contributing factors for identified high injury segments. The provided information for each segment includes the length of the roadway, a breakdown of how many crashes involving people walking and biking occurred at intersections with and without striped pedestrian crossings and at midblock locations, and then the top three contributing factors for each segment as found in the associated crash records.

Table A-15. Pedestrian Collisions High Injury Network

## Appendix B: Community Engagement

# Public Engagement Plan

## INTRODUCTION

### Project Background

Sacramento County is updating and combining their prior Bicycle and Pedestrian Master Plans into a countywide Active Transportation Plan. Working with Alta Planning + Design, WALKSacramento and DKS, the County seeks to engage the County’s environmental justice communities, non-English speaking households, people without internet access, and other hard-to-reach populations to create a plan that makes walking, bicycling and active modes safe and accessible for all.

### Objectives

The fundamental objectives of the Public Engagement Plan (PEP) are to:

- Ensure that those with a stake in Sacramento County ATP are identified;
- Identify outreach techniques for engaging these stakeholders;

- Ensure all stakeholders have open access to and input in the decision-making process and are provided with information about the project as it moves forward;
- Provide reasonable public access to technical and other information about the project; and
- Ensure the concerns, issues and preferences of stakeholders are gathered, and are reflected in the final document.

### Priority Audiences

- People who use active transportation as a frequent mode of transportation (walk, bike, rolling, mobility devices, etc.)
- People who are interested in biking but perceive barriers
- Households with zero or one vehicle
- Residents of Environmental Justice communities
  - North Highlands/Foothill Farms
  - West Arden Arcade

- North Vineyard
- South Sacramento
- Households with limited English-speaking proficiency
- Households with no internet access

### Stakeholders

#### Organized Interest Groups

The following groups are prioritized for stakeholder meetings during Phase 1 outreach. These groups represent priority audiences throughout the County and in EJ communities and can provide a high-level overview of current conditions and priorities for active transportation that are relevant to their audiences.

#### Bike and Active Transportation Organizations

- Sacramento County Bicycle Advisory Committee
- Sacramento Area Bicycle Advocates
- Folsom Area Bicycle Advocates

- o Bike Lab
- o Project Hero
- o Contagious Wheels
- o Sacramento Wheelmen Bicycle Group
- o Sacramento Bike Hikers
- Transportation Management Agencies
  - o Sacramento Transportation Management Agency
  - o 50 Corridor Transportation Management Agency
  - o North Natomas Jibe
  - o South Natomas Transportation Management Agency
  - o McClellan Transportation Management Agency
  - o Power Inn Alliance
- Disability Organizations
  - o Sacramento County Disability Advisory Commission
  - o Resources for Independent Living
  - o Society for the Blind
  - o On My Own Community Services
- o Seeds of Partnerships
- o NorCal Services for Deaf and Hard of Hearing
- o ACB Capital Chapter of the California Council of the Blind
- o Alta California Regional Center
- o American Association of People with Disabilities (AAPD)
- o California Association of the Deaf
- o Californians for Disability Rights
- o Disability Rights Advocates
- o Disability Rights California
- o Easterseals Superior California
- o Pride Industries
- o SacRT Access Services
- o SacRT Mobility Advisory Council
- o United Cerebral Palsy of Sacramento and Northern California
- o Wounded Warrior Project
- Environmental Justice Organizations
  - o Red Black and Green EJ Coalition
- o Impact Sacramento
- o Stephens Foundation
- o Environmental Council of Sacramento
- o Organize Sacramento
- o Sacramento Tree Foundation
- o Sacramento Steps Forward
- o Everyday Impact Consulting
- o Sierra Club Sacramento
- Community-Based Organizations/ Cultural Brokers
  - o Building Healthy Communities
  - o Black Child Legacy Campaign
  - o Sacramento Area Congregations Together (SacACT)
  - o United Latinos
  - o Asian Resources
  - o Roberts Family Development Center
  - o Mutual Assistance Network
  - o Latino Coalition for a Healthy California (LCHC)

- o Lao Family Community Development
  - o Lu-Mien Community Services
  - o Gujarati Samaj of Sacramento
  - o Greater Sacramento Urban League
  - o Homng Innovating Politics (HIP)
  - o La Familia Counseling Center
- Sacramento County Agencies
- o Public Health Department
  - o Department of Human Assistance
  - o Planning and Environmental Review
  - o Emergency Services
  - o Sheriff's Department
  - o Office of Education
  - o Disability Compliance Office
  - o Therapeutic Recreation Services

Youth Organizations

- o First 5 Sacramento

- o Sacramento County Youth Commission
- o SACOG Youth Leadership Academy
- o Pro Youth and Families
- o Sacramento Chinese Community Service Center
- o 916 Ink
- o Boys and Girls Club of Greater Sacramento
- o Hands4Hope
- o Omni Youth Programs
- o Sol Collective
- o Youth Development Network

Older Adult Organizations

- o AARP - Sacramento Chapter
- o Sacramento County Adult and Aging Commission
- o Older Women's League, Sacramento Capitol
- o Agency on Aging Area 4
- o ACC Senior Services

Health Organizations

- o American Heart Association - Sacramento Chapter
- o Breathe California
- o Safe Kids Greater Sacramento
- o UCD Trauma Prevention
- o Health Education Council

Transit Agencies

- o Sacramento Regional Transit
- o E-Tran
- o South County Transit
- o Paratransit

Neighboring Jurisdictions

- o City of Sacramento
- o City of Rancho Cordova
- o City of Elk Grove
- o City of Folsom
- o City of Citrus Heights
- o City of Isleton
- o City of Galt
- o Sutter County

- o Placer County
- o El Dorado County
- o Amador County
- o San Joaquin County
- o Solano County
- o Yolo County

**Community-Focused Engagement Partners**

The following groups are community-oriented organizations that may be able to support community-focused engagement activities such as pop-up events.

Location	Organizations
Countywide	Sacramento Food Bank and Family Services ACC Senior Services Hmong Innovating Politics Lu-Mien Community Services Lao Family Community Development Community Resource Project Mutual Assistance Network Greater Sacramento Urban League

**Youth-Focused Engagement Partners**

The following groups are youth-oriented organizations that may be able to support youth-focused engagement activities such as Video and Photo Voice, which are projects where students highlight and describe their concerns and priorities around transportation and the built environment through videos or photo journals.

- Boys and Girls Club of Greater Sacramento
- Sacramento Chinese Community Service Center
- Roberts Family Development Center
- 916 Ink
- Sol Collective
- Youth Development Network
- Onmi Youth Programs
- Hands4Hope
- Pro Youth and Families

- School Districts
  - Twin Rivers Unified School District
  - Sacramento City Unified School District
  - Elk Grove Unified School District
  - San Juan Unified School District
  - Folsom Cordova Unified School District

**Promotional Partners**

These groups can help spread the word about the project, share the survey and other resources, and direct people to the website for additional input and information.

- County Supervisor Districts
  - Supervisor Susan Peters
  - Supervisor Patrick Kennedy
  - Supervisor Don Nottoli
  - Supervisor Phil Serna
  - Supervisor Sue Frost

- Countywide Community-Based Organizations
  - International Rescue Committee – Sacramento
  - Sacramento Tree Foundation
  - Sacramento Valley Ministers' Wives & Ministers' Widows
  - United Way Capital Region
  - Sacramento Transit Rider’s Union

# Outreach Phases, Goals, and Strategies

## BIKE BUSINESSES

The following list of bike businesses will be included in outreach efforts.

- Bob's Cycle Center
- Neighborhood Bike Shop of Antelope
- Kinetic Cycles
- Carmichael Bike Shop
- Laid Back Cycles
- Biker Bar & Café
- Bike Medic
- Green Flag Racing
- Big Dream Bike Tours LLC
- River Rat Raft Rental Inc
- AR Cycles
- AlphaBent
- Practical Cycle

The public outreach process will have two major phases: the first phase will solicit feedback on existing conditions, key destinations, and community concerns (Task 2), while the second phase will engage the public to provide feedback on the active transportation network analysis (Task 4) and the list and prioritization of recommended projects (Task 5). Note that the dates for each phase below are draft and subject to change.

## PHASE 1

Phase 1 will center on listening to the community and soliciting feedback on existing conditions, key destinations, and community concerns. It will run from August 2020 to November/December 2020.

## Phase 1 Goals

- Ensure that those with a stake in Sacramento County ATP are identified;
- Identify outreach techniques for engaging these stakeholders;
- Ensure all stakeholders are provided with information about the project as it moves forward;
- Develop a shared vision and goals for active transportation in the County;
- Identify key corridors and destinations, active transportation infrastructure gaps, and opportunities for improvement;
- Ensure the concerns and issues of stakeholders are heard and gathered.

Phase 1 Messaging

- We are working to create an Active Transportation Plan to make it safer, easier, and more comfortable for people all across the County to get around by foot and by bicycle
- Focus on identifying issues, not solutions
  - o How do you get around? How would you like to get around? (to work, school, parks, stores, etc)
  - o [If they bike/walk] Why do you bike and walk? What do you like about it? What don't you like about it?
  - o [If they don't bike/walk] How do you get around? Why don't you walk and bike? When in your life did you walk and bike? What changed?

PHASE 2

Phase 2 will center on presenting the draft project and program recommendations, prioritization, design guidelines, and active transportation network analysis to the community, and soliciting feedback in order to make the final project and program recommendations, and prioritization. It will run from March to July 2021.

Phase 2 Goals

- Ensure that stakeholders identified in Phase 1 are engaged;
- Ensure all stakeholders are provided with information about the project as it moves forward, including the draft project and program recommendations, prioritization, design guidelines, and active transportation network analysis;
- Receive feedback on desired adjustments to draft project and program recommendations, prioritization, and design guidelines;
- Ensure the concerns and issues of stakeholders are heard and gathered.

Phase 2 Messaging

- In Phase 1, we heard the following concerns from residents of Sacramento County
- We are proposing the following projects and programs, prioritization, and design guidelines. Looking at these, is anything missing? Inaccurate?

# Stakeholder Meeting and Pop-up Summaries

## PHASE 1 STAKEHOLDER MEETINGS

### North Vineyard - January 19, 2021

#### Attendees

3 project staff, 1 project partner, and 1 community member participated in a virtual pop-up meeting through Zoom.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Anne Okafor, WALKSacramento
- Leah Barrett, 50 Corridor Transportation Management Agency
- 1 community member

#### Input Received

- Goals and Priorities
- Benefits of walking: meditative, relaxing, can enjoy social interaction with neighbors
- Bicyclists tend to be the most vocal group, so ensure that the voices of people who walk and use other forms of active transportation are heard through this process as well

(particularly older adults and people with disabilities).

- Walking routes and destinations include:
  - Camden Lake Trail
  - 3-4 mile loop from Meadowhaven Drive to Tillotson Parkway and back around to Spengler Drive

#### Challenges

- The biggest concern is the interaction between pedestrians and bicyclists on shared paths and trails. Bicyclists often move fast and don't slow down for pedestrians, creating concerns for collisions.
- Bikes often use sidewalks instead of bike lanes, which forces pedestrians into the street.
- Lack of signage indicating shared streets for bikes and cars.
- Lots of high speed arterials and wide streets in the Vineyard area that make walking and biking uncomfortable, such as Gerber Road, Elk Grove Florin Road, and Bradshaw Road.

- It doesn't feel safe or practical to use a bike in the Vineyard area. The participant shared a memory of growing up in a small town in Iowa where most people biked for recreation or other trips, and it felt safe because everyone knew each other and people who drove would be very slow and careful around their neighbors. Biking is more challenging in Sacramento because cars move too fast and recklessly and there aren't enough other people out biking to make it feel safe.
- Specific areas of concern:
  - Meadowhaven Drive is wide enough for bikes and cars, but bikes often prefer to use the separated sidewalk instead which creates concerns for conflicts with pedestrians.
  - Neighborhood off of Bradshaw and Gerber has no marked bike lanes, and cars parked along the sides make the streets feel cramped to bike through.

**Opportunities**

- Designated walking trails would be preferred over shared walking and biking paths. Overall, keeping pedestrian and bicycle infrastructure separate is ideal.
- Four way stop signs force cars and bikes to slow down and makes it safer for people of all modes. The participant indicated the City of Davis as a model to follow.
- Reach out to older adults through senior centers (such as the Elk Grove senior center)
- There are a lot of Asian community members in Vineyard who walk (particularly older adults), so it would be great to connect with them through this process.
- Camden Lake is a popular weekend recreational destination and may be a good opportunity for tabling and sharing more information about the Plan.

**Sacramento County Disability Advisory Committee – July 21, 2020**

**Attendees**

12 people participated via virtual Skype meeting (including Mikki McDaniel)

**Input Received**

**Goals and Priorities**

People with disabilities should specifically be mentioned in the goals.

**Public Engagement Plan**

- Add GLBTQ organizations and organizations addressing homelessness. Include Sacramento Self Help Housing.
- Add indigenous peoples’ groups: Sacramento Native American Health Center, California Indian Heritage Commission, California Native American Legacy, and California Indian Health Services.

**Challenges**

- Combining bicycles and pedestrians into one plan can lead to pedestrian needs getting lost.
- Accessibility needs to be defined in the plan. Accessibility in the disabled rights world means something different than in the transportation world.
- Curb ramps to existing, private driveways are not meeting cross slope standards. A wheelchair user can and has fallen due to the unmanageable and substandard cross slopes at driveways on Watt Avenue.
- Auburn Blvd – full length of street. The sidewalk condition is very poor and traffic moves at highway speed.
- Watt Avenue – A hand-powered cyclist (using a wheelchair modified to also be used with a hand crank) said that he does not like to use bicycle lanes and chooses to use the sidewalk on Watt because of the speed of traffic.

- E-bike riders face a lot of challenges.
- Howe Avenue - Cars on Howe are pulling out beyond limit lines because of blind spots.
- Dell Avenue and Mission Avenue were cited as challenging places to walk and bike.
- The transition from the El Camino Park District to the American River is difficult.
- Difficult Route in Arden: Northrup Ave to Bell Ave to Irma Way

**Opportunities**

- Disabled cyclists needs should be addressed.
- Meetings should be noticed such that anyone has the ability to access accommodations and provide them if requested. Accommodations should be made per the individual request, i.e. the format requested according to ADA.

- Wheelchair users differ on the use of “walk” versus “roll”. However, “walk” should be defined in the plan to refer to people who both walk and roll (using a wheelchair) or both terms should be used.
- Diverters along bike lanes and transitional curbing are also helpful for people on the sidewalk as it provides more separation from traffic.
- Buffered bike lanes help low-riding bicyclists (i.e. recumbent or adaptive bicycles).
- Empowerment Park is a good example of how to build a facility. The park has curb ramps and accessible recreational equipment. People should be able to bike and walk to this park.
- The Los Rios School District did a transportation study that is old now, but could provide good information.

**Survey and Website Feedback**

- Survey - The survey should be made to be fully accessible. Readers that are used to build the site are not always reflective of a typical user’s experience using an accessibility reader.
- Website
  - o The website is not fully readable by an accessibility reader and should be. The interactive map is not useable at all by an accessibility reader. It is good that a project email and a phone number are posted in order to provide other ways to provide input.
  - o Captioning should be made for deaf and blind (for use by accessibility readers) in any videos.
  - o Any outreach collateral should be in Braille and large print.

- o Providing captioning or an interpreter for meetings, regardless of whether accommodation has been requested, could be a nice gesture to the Deaf community.

### Questions From Attendees

- How do you interact with the City of Sacramento/American River Parkway, Rancho Cordova on the plan?
- Why are we combining bicycles and pedestrians? Pedestrian needs can get lost in the shuffle.

### City of Rancho Cordova - August 27, 2020

#### Attendees

- 7 people participated via virtual Zoom meeting
- Byron Tang, City of Rancho Cordova
- Brian Chan, City of Rancho Cordova
- A Swanson, City of Rancho Cordova

- Edgar Medina, City of Rancho Cordova
- Quoc Nham, City of Rancho Cordova
- Rick Carter, Sacramento County Department of Transportation
- Mikki McDaniel, Sacramento County Department of Transportation

### Input Received

#### Challenging Locations for Walking and Biking

- Douglas Rd, west of Folsom South Canal to Zinfandel Dr
  - o This is a gateway path for cyclists. We would like a paved shoulder be six feet wide.
  - o Can it be added to CIP and a project plan?
- Folsom South Canal connection at Kiefer Blvd
  - o This is a connection to Keifer and New Bridge Plan Area.

- o Sidewalks are needed east of the Kiefer/Folsom South Canal entrance.

- Old Placerville Road, east of Bradview Dr.
  - o Add sidewalks
- Sunrise Blvd, north of S. Bridge St.
  - o There are a lack of sidewalks on South Bridge east of Sunrise. There is a Class I trail, but there could also be a sidewalk.

- Rod Beaudry, north of Tiffany Lane
  - o Would like separation from the road for pedestrians, like an AC trail.
- White Rock Road.
  - o There is a bicycle lane gap from the end of the City to Grant Line Road

City of Rancho Cordova does not have a Bicycle Advisory Committee. There is an organization called Bicycle Advocates of Rancho Cordova.

Sacramento Regional Transit Bus Stop Group – September 24, 2020

Attendees

- 12 people participated via virtual Microsoft Teams meeting
- SacRT staff: Sarah Kerber, Mike Fitzpatrick, Sarah Poe, Max West, Blanca Salcedo, Aimee Steele, Eric Oparko, CTyler, EReitz, Desi Lopez, Sherri Adams, and RNIelson.
- SacDOT staff included Mikki McDaniel and Kevin Tan.

Input Received

Challenges

- Reaching a bus stop at Madison & Dewey is difficult. Comment was posted on the public input map at walkbikesaccounty.net.
- Bus stop on Folsom at Bradshaw is almost impossible to reach. DOT is already planning to remove.

Opportunities

- Eric Oparko expressed a desire for RT to be able to give DOT input on bus stop pads for shorter term DOT planning
- RT has received a grant to survey walking area around bus stops. They will work with WalkSacramento.

Survey and Website Feedback

- Seemed like there was an issue with viewing comments on receiving end
- Overall was enthusiastic about the website and its opportunity to highlight infrastructure.

Questions From Attendees

- How do all the ADA, ATP, Bike, and Pedestrian Plans mesh with each other?
- What is the timing of the bus stop removal on Folsom just west of Bradshaw?

Sacramento Regional Transit Mobility Advisory Council – October 1, 2020

Attendees

26 people participated by Microsoft Teams.

- Council Members: Chair Pam Flohr, Vice Chair Jeff Thom, April Wick, Eugene Lozano, Helen O’Connell, William Charles Johnson, Linda Berry, Patti Johnson, and Alan Ruzich
- SacRT Staff:, Carmen Alba, Rose Patton, Charity Oakley, Sarah Kerber, Dan Thao, Kathy Sachen, James Drake, Craig Norman, Chris Florez, Jamie Poole-Canevari, Wendy Melton, and Andrea Williams-Garcia.
- Guests: Mikki McDaniel, Frank Trullio, Roger Oberholzer, Jeff Tardaguila, Mike Barnbaum.

**Input Received**

SacRT Mobility Advisory Council is made up of seniors and disabled community members who advise the SacRT Board on mobility and accessibility issues.

**Experiences**

- I needed to be on guard when using the Watt I-80 elevator – dirty.
- At a mid-block crossing on Orange Grove about one fourth mile from the Orange Grove and Auburn intersection, it is hazardous to cross the street. There is the choice to cross mid-block at Pasadena where there is no signal, but there needs to be one. I get cut off by college student drivers turning right and have once been struck by a cyclist [as a pedestrian].
- Bicycles and scooters are not supposed to be on the sidewalk. They are especially hazardous if you have hearing loss. Dogs on leash can also cause a pedestrian to fall. The

presence of homeless people make seniors feel very vulnerable.

- Benches have been removed in many public places. Older people can't stop and rest. This is alarming to me. Don't take them all out.
- There is no sidewalk on Florin Perkins north of Belvedere to Jackson Highway to reach the light rail station on the western side. [This location is in the City of Sacramento.]

**Challenging Locations for Walking and Biking**

- Fair Oaks and Howe Avenue
- Sierra Boulevard between Howe and Fulton near the Unitarian Church. There is no sidewalk between the bus stop and the church so you have to walk in the street. Need to complete the sidewalk.
- Crossing streets where there are railroad tracks.
- Fire hydrants in the middle of sidewalks.

**Other Input on Engagement**

- Cheryl Bennett and April Wick offered to provide additional contact information for NorCal Deaf Association.
- The online survey should be made to be fully accessible.
- The web map could have had boxes to be able to be more accessible.
- Alta has an interactive survey, but it needs to be tested by screen readers.
- DAC/ECOS/DOT did a walk evaluation 15 years ago on Sierra Boulevard from Howe to Watt Avenue that could be useful.
- Gene Lozano can find a volunteer to test for screen readability.

City of Citrus Heights – October 13, 2020

Attendees

- 4 people participated via virtual Zoom meeting
- Casey Kempenaar, City of Citrus Heights
- Leslie Blomquist, City of Citrus Heights
- Rick Carter, Sacramento County Department of Transportation
- Mikki McDaniel, Sacramento County Department of Transportation

Input Received

- West Arcade Trail – Creek Corridor Feasibility Study is coming up. Orangevale Recreation and Park will be participating. The alternate scenario is for the trail not to go through the County and to instead, follow the County line.

- Electric Green way stops at Wachtell just south of Titalo Way
- Discussed the four agency multi-connector feasibility study. City will pursue a grant for a feasibility study with a County local match.
- Emails sent prior to the meeting coordinating on bikeways and walkways, including a detailed description of the four agency multi-connector feasibility study, are attached.

Sacramento County Disability Advisory Commission – Physical Access Subcommittee – November 17, 2020

**Members Present:** Gene Lozano, Chair; Bill Fallai, Patty Gainer, Scott Harger, Randy Hicks, Carol Moss, LaTasha Richardson, Jeff Tardaguila

**Members Absent:** None

**Guests** Mikki McDaniel, Department of Transportation

**Staff:** Cori Stillson and Cheryl Bennett, Disability Compliance Office (DCO)

Update – Active Transportation Plan (ATP)

Mikki McDaniel provided an overview of the ATP Public Engagement process which included 30 stakeholder groups. She summarized the community input obtained through public meetings and surveys. It was noted that there were many comments from the community at large that were similar to those provided by the Subcommittee. Some common themes were speed enforcement, path of travel to public transit, bike parking, street cleaning, connection to services, and sidewalk continuity. Members discussed and debated various access barriers often encountered with shared bike/pedestrian spaces and shared experiences with specific local intersections or neighborhoods. Ms. McDaniel thanked the Subcommittee for their input and pledged to return with further updates in Spring 2021.

### Sacramento County Disability Advisory Commission - Physical Access Subcommittee - December 15, 2020

#### Attendees

26 people participated.

**Members Present:** Gene Lozano, Chair; Bill Fallai, Patty Gainer, Scott Harger, Randy Hicks, Carol Moss, LaTasha Richardson, Jeff Tardaguila

**Members Absent:** None

**Guests** Mikki McDaniel, Department of Transportation

**Staff:** Cori Stillson and Cheryl Bennett, Disability Compliance Office (DCO)

Staff provided an update on public engagement so far for the Active Transportation Plan update.

Mikki McDaniel provided an overview of the ATP Public Engagement process which included 30 stakeholder groups. She summarized the community input

obtained through public meetings and surveys. It was noted that there were many comments from the community at large that were similar to those provided by the Subcommittee. Some common themes were speed enforcement, path of travel to public transit, bike parking, street cleaning, connection to services, and sidewalk continuity. Members discussed and debated various access barriers often encountered with shared bike/pedestrian spaces and shared experiences with specific local intersections or neighborhoods. Ms. McDaniel thanked the Subcommittee for their input and pledged to return with further updates in Spring 2021.

#### Input Received

Does the County have a policy on Class IV bikeways? Can emergency vehicles and paratransit vehicles still load and unload passengers curbside where there are Class IV bike facilities?

The County needs a policy on Class IV bikeways. There should be a policy in place that specifically allows loading and unloading of passengers for emergency vehicles and paratransit vehicles, regardless of other motor vehicle prohibition, within a Class IV bikeway.

### Arden-Arcade/International Rescue Committee - December 29, 2020

#### Attendees

3 project staff, 3 project partners, and 11 community members participated in a virtual pop-up meeting through Zoom. The meeting was conducted in both English and Farsi.

- Kiara Reed, WALKSacramento
- Molly Wagner, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Margeaux Fischer, IRC
- Yassaman Vedad, IRC
- Chali Temple, IRC
- 11 community members

Input Received

Goals and Priorities

- Prioritize safe routes to parks, especially for young families.
- Prioritize safety of women and young children.
- Educational programming catered towards new immigrants to the U.S. that focuses on pedestrian and cyclist safety and bicycle maintenance.
- Increase overall engagement with immigrant communities.

Challenges

- Many people are walking less than before due to Covid-related health and safety concerns.
- Recent immigrants to the United States find it challenging to understand or learn pedestrian etiquette and safety.

- Missing sidewalk segments, lack of lighting, and fast-moving traffic create an unwelcoming and unsafe environment for pedestrians and cyclists.
- Long distances to popular destinations make walking and biking unrealistic, especially for young families.
- Allowing children to play in the street is a cultural norm in the Afghan community, however, American drivers do not expect this, making it dangerous for both drivers and young pedestrians.

Opportunities

- Culturally sensitive educational programs and campaigns related to pedestrian and cyclist safety for walkers, bikers, and drivers.
- Partnerships with bike advocacy organizations to organize and provide classes for those who wish to learn more about cycling, including how to ride a bike and bike maintenance.

- Wayfinding available in multiple languages to help a wider variety of people feel more confident and safe when travelling to their destination.
- Infrastructure improvements, such as wider sidewalks and dedicated bike lanes, to encourage walking, biking, and rolling.
- Improving connections between transit and cyclist and pedestrian networks.

South Sacramento - January 14, 2021

Attendees

4 project staff, 3 project partners, and 21 community members participated in a virtual pop-up meeting through Zoom. The meeting was conducted in both English and Spanish.

- Mikki McDaniel, Sacramento County Department of Transportation
- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento

- Anne Okafor, WALKSacramento
- Nahdxyeli Valdez, La Familia
- Marissa Reyes, La Familia
- Maria Cruz, La Familia
- 21 community members

## Input Received

### Goals and Priorities

- "Comfort" means feeling safe and secure and being able to move freely wherever people want to go.
- "Safety" means:
  - A lack of danger and being able to do things without getting hurt.
  - Having no risk when exercising or walking. Not having to be on your guard to avoid hazards.
  - No loose aggressive dogs.
  - Barriers to protect from automobiles and not having to worry about a car hitting you when crossing the street.
- Good lighting and enough foot traffic to prevent crime.
- Favorite forms of active transportation include walking, biking, and scootering. People often use active transportation to get to transit as well.
- Favorite destinations for active transportation include schools and parks. Specific destinations include:
  - Old Sacramento (favorite way to get there is to go under the pedestrian bridge and out to the river trail)
  - Walking and biking in the delta
  - Shasta Park and Echo Park in Elk Grove
- Prior to the pandemic, people used to walk, bike, or roll between 3-5 times per week, primarily for work and to drop off/pick up students from school. During the pandemic, people are using active transportation less because of shelter in place.

- Generally, active transportation is seen as a great way to relieve stress, interact with friends and neighbors, and go out to places like parks.

### Challenges

- Places are far away
- Biking is a lot of work
- Hot and rainy weather discourages active travel
- Health and safety concerns during the pandemic
- Traffic safety – cars don't respect pedestrians
- Personal safety – usually people in the neighborhood are friendly but sometimes they aren't
- Lack of lighting, especially in the evening when the chance of being hit by a car increases
- Lack of curb cuts and smooth sidewalks

- Bike lanes often don't feel safe because they are narrow and have debris such as broken glass. One participant shared that biking is her only method of transportation to work, and broken glass in the bike lane creates concerns about popped tires. Additionally, because bike lanes are narrow and close to fast traffic, many people use the sidewalks instead. However, sidewalks also tend to be bumpy and create an uncomfortable ride.

**Sacramento County Agencies - September 22, 2021**

**Attendees**

Four people participated in a virtual focus group conversation through Zoom.

- Victoria Cacciatore, SACOG
- Tim Choi, Sac County Department of Human Assistance

- Cheryl Bennett, representing the Disability Compliance Office and Disability Advisory Commission
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento
- Mikki McDaniel, SacDOT

**Input Received**

**Goals and Priorities**

- Make sure that an ATP fits in with the context and supports other initiatives. Look at where people go within a two-week period.
- Access to jobs and job interviews.
- Provide bikes for people and linking them to major volunteer or service provider destinations.
- Safe crossings for people using mobility devices that includes clear marking, ramp, no dedicated turn

lanes, straight not diagonal crossing, and longer walk times.

- Think about families and their use of sidewalks and refuge islands.

**Challenges**

- Continuous access is really difficult in the county for medical services.
- Service delivery model for assistance does no good if people can't access healthy foods or farmers markets.
- People aren't able to get to the places they need to go to.
- Unsafe crossings.
- Bicycles sharing space with pedestrians is a danger to people with disabilities or impairments.
- More uniform bike lane design.
- Prioritize bicycling as transportation; or identify streets as either bike friendly or not.

- Really wide intersections.
- Specific locations of concern:
  - Stockton Blvd and Florin Road are dangerous for walking and biking
  - Long stretches between crossings in north areas.
  - Bell and Arden: crossings to school.

### Opportunities

- Work with Black Child Legacy Campaign, WIC, and other clusters of services.
- BCLC would be great for spreading the survey.
- Pop-up projects.
- SACOG TOD toolkit has transit stations in Sac County that would be useful to examine in how it could support initiatives. Butterfield station has been identified for short-term opportunities

### Foothill Ranch Middle School – November 4, 2020

#### Attendees

19 people participated in a virtual focus group conversation through Zoom, including 10 Foothill Ranch students, 5 after-school program staff, and 4 project team members.

#### Project Team:

- Mikki McDaniel, Sacramento County Department of Transportation
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento
- Anne Okafor, WALKSacramento

### Input Received

#### Goals and Priorities

- Benefits to walking, biking, and rolling:
  - See and meet people
  - Good for exercise and health
  - Less pollution in the air

- Helps clear the mind
- Not everyone has a car

### Challenges

- Personal safety is a concern when walking in the neighborhood.
- Lack of lighting, narrow sidewalks, and litter create an uncomfortable walking experience.
- Specific areas of concern:
  - Hillsdale Boulevard has a lot of fast traffic that makes it feel unsafe for walking and biking.
  - Cars drive fast along Diablo Drive and do not yield to pedestrians trying to cross.
  - Locations that were specified as walking and biking destinations included Robert Frost Park, La Superior Mercado, and Dollar General.

Opportunities

- Students often use active transportation to go to parks, stores, and restaurants. Connectivity to these locations is critical.
- Want to have more greenery in the neighborhood and along routes.

Fern Bacon Middle School – November 2, 2020

Attendees

17 people participated in a virtual focus group conversation through Zoom.

Fern Bacon Middle School Staff:

- Monica Ramos

Project Team:

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Kiara Reed, WALKSacramento

Input Received

Goals and Priorities

- Frequent destinations that students mentioned travelling to included parks, the Splash Aquarium, convenient stores, and friends’ houses. Access to these locations should be prioritized, with special attention to youth safety and comfort.
- Walking, running, and biking were expressed as preferred active transportation methods.

Challenges

- Streets adjacent to Fern Bacon Middle School appear to be hot spots for vehicular and pedestrian accidents. Several students reported being personally involved in crashes or knowing friends and family who had been involved in crashes along Franklin Boulevard and Florin Road.

- Longer distances to certain destinations was mentioned as an obstacle to using various modes of active transportation more frequently.
- Poorly maintained roads caused issues for bicycle maintenance (i.e., popped tires), placing cost burdens for repairs on youth.
- Specific areas of concern:
  - Florin Road (especially near where the Light Rail intersects with Florin)
  - Franklin Boulevard (especially in front of Bowling Green Elementary School)

Opportunities

- Providing more shade (i.e., street trees) along popular routes could encourage students to walk more frequently, especially during hotter times of the year.

- Adding traffic calming and/or enforcement measures, such as traffic light cameras, offer opportunities to promote safety for students and families around Fern Bacon Middle School.

### Aging Adults - AARP - December 3, 2020

#### Attendees

4 project staff, 1 project partner, and 22 community members participated in a virtual pop-up meeting through Zoom.

- Mikki McDaniel, Sacramento County Department of Transportation
- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Anne Okafor, WALKSacramento
- Jennifer Berdugo, AARP
- 22 community members

### Input Received

#### Goals and Priorities

- Prioritize infrastructure that helps reduce speeds in and around residential neighborhoods.
- Prioritize safe routes to parks, trails and essential destinations.
- Prioritize safety of aging populations and persons with disabilities who may use walkers and wheelchairs.
- Prioritize improvements in all areas particularly outside of the midtown and the downtown core.

#### Challenges

- When biking and walking there are a lot of blind spots that make it dangerous.
- Wet leaves in dedicated bike lanes make it unsafe for bicyclists.
- Bike lane widths are not wide enough, are incomplete or simply do not exist.

- Biking and walking is not always safe, especially at night and current infrastructure doesn't support walking and biking.
- Wheelchair ramps are broken, inconsistent and worn out.
- Without sidewalks, using a walker is difficult and unsafe.

#### Opportunities

- Infrastructure improvements, especially around visibility and wayfinding.
- Prioritize infrastructure improvements like wider sidewalks and dedicated bike lanes, to encourage walking, biking, and rolling in areas that currently prioritize vehicles.
- Utilize Barcodes or QR codes where you can click and access maps.

Disability – Resources for Independent Living – October 23, 2020

Attendees

8 people participated in a virtual focus group conversation through Zoom.

- Nicholas Lanphear, Resources for Independent Living
- April Wick, Resources for Independent Living
- Tony Vi, Resources for Independent Living
- Kaelea Luca, Resources for Independent Living
- Angelina Guerrero, Resources for Independent Living
- Helen O’Connell, Resources for Independent Living
- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento

Input Received

Goals and Priorities

- Prioritize access to the following locations by increasing connectivity between pedestrian, bus, light rail, and cyclist networks: grocery stores, hospitals/medical offices, schools, and job centers.
- Improve access to outdoor recreational opportunities, particularly trails and parks, by consistently providing 110 outlets for those who use electrically powered mobility devices.

Challenges

- COVID-19 Challenges
  - Bikeshare (Jump Bikes) was not available for a period of time during the pandemic.
- Poorly maintained sidewalks and roads make cycling, walking, and rolling dangerous, especially along busy roadways.

- Many bus stops do not have elevated sidewalks, which increases the incline of the wheelchair ramp from the bus to the street and creates unsafe conditions for wheelchair users.
- There is a disconnect between job centers and public transportation/active transportation networks (i.e., jobs in the food service industry in Natomas difficult to access without a car)
- Specific areas of concern:
  - Along Jackson Road: no sidewalk—dangerous for walking
  - Between Sacramento City College and Hiram Johnson High School: unmaintained, narrow dedicated bike lane shared with parked cars, runs parallel to busy roadway, aggressive drivers—dangerous for cycling
  - Harlin Drive around the Applied Behavior Consultants (ABC) School: no sidewalks or bus stops

- dangerous for walking, difficult to access
- o Between Power Inn and Rancho Cordova: no sidewalks—dangerous for walking
- o 14th Avenue from Sutter to 65th Street: Narrow road with busy traffic, unprotected bike lane - dangerous for cycling
- o Florin Road: sidewalk gaps, difficult surfaces (i.e., gravel) to walk on - dangerous for walking, rolling, biking
- o 47th Avenue: There are sidewalk gaps that prevent access to bus stops
- o Thornhill Drive: no bicycle facilities, dangerous for cycling (especially at night)

Opportunities

- Think creatively about promoting access to alternatives of key destinations. For instance,

emphasizing access to local farmers' markets can improve access to healthy food for those who are located further away from grocery stores.

- Connecting active transportation networks to public transportation networks, particularly addressing first/last mile gaps to light rail stations and bus stops, was identified as a priority. Micro mobility modes (i.e., bike share and scooters) appear to be frequently used to access transit.

Greater Sacramento Area Park Managers Meeting - March 18, 2020

Attendees

3 people and 1 County staff person participated via virtual Zoom meeting. (Not all participant names were recorded.)

Liz Bellas, Sacramento County Regional Parks

Mike Heller, Rio Linda Elverta Parks

Cristina James, Cordova Recreation and Parks

Mikki McDaniel, Sacramento County Department of Transportation

Staff presented on the Active Transportation Plan schedule, outreach, and analysis. Some key points from the analysis include:

- Concurrent with outreach, our consulting team, Alta and DKS Associates, have been performing analysis to figure out where we need to improve bicycle and pedestrian facilities. Their analysis includes origin/destination, safety, equity, and level of stress.
- **The bicycle network is inconsistent** across the County. Some communities have dense networks and other areas have few facilities.
- There are **limited regional connections** between incorporated and unincorporated County

- Many trips **less than 5 miles** occur in the northern part of the County. Most areas of the County are projected to see some increases in walking and biking trips
- **Access to light rail is key** because most current and future jobs will be located along light rail lines
- The highest concentrations of **population growth** are expected to occur within the master plan areas
- 55 miles of roadway (6.5% of unincorporated roads) compose the high-injury network
- Many designated bikeways are **high-stress for people biking**. Most arterial and collector streets are also **high-stress for people walking**

Staff discussed how the plan can help Sacramento Area parks for their districts’ projects. Invited park districts to the May workshops.

Input Received

- No input received.

City of Elk Grove - February 8, 2020

Attendees

3 people participated via virtual Zoom meeting

- Kevin Bewsey, City of Elk Grove
- Carrie Whitlock, City of Elk Grove
- Mikki McDaniel, Sacramento County Department of Transportation

Input Received

Discussed Elk Grove-unincorporated County bike and ped issues, including:

- Laguna Creek Trail has several alignments west of Franklin Boulevard and south of Cosumnes River Boulevard, depending of whose plan you are looking for between the City of Elk Grove, City of Sacramento, and County of Sacramento. The City of Elk Grove has a grant to look at this and do more planning.

- Overlap in planning with different proposed facilities for Grant Line Road and Kammerer Road.
- Class 1, 2, 3 connections across Calvine Road and considering EGUSD boundaries do not align with City Limits
- Consider adding a priority to the County’s plan, to inform Elk Grove planning efforts.

County requested GIS or a map for Laguna Creek Trail that Elk Grove is using, and any proposed connections across Calvine Road.

Meeting Follow-up

Mikki McDaniel sent the City the adopted Ped and Bicycle Master Plan GIS for the County as well as responses below on February 10, 2021.

- Laguna Creek Trail alignment – County adopted BMP (pdf) show an existing Class II along Franklin and proposed Class II along Cosumnes

River Blvd west of Franklin in the pdf of the plan.

- Crossings over Calvine Road proposed in County adopted Bicycle Master Plan include a Class I crossing in between the high schools east of Kingsbridge; and another Class I crossing along UPRR.
- County mapping shows a proposed Class II on Kammerer from Bruceville to Grant Line/Cosumnes River Blvd.

## Health Organizations - September 22, 2021

### Attendees

6 people participated in a virtual focus group conversation through Zoom.

- Stacy Springer, Breathe CA
- Misael Chavarin, UC Davis Trauma Prevention Center
- Roxana Garcia-Ochoa, Health Education Council (HEC)
- Monica Alleje, American Heart Association (AHA)

- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento

## Input Received

### Goals and Priorities

- Need to consider first and last mile connections between various modes.
- A Complete Streets policy would be valuable in order to ensure a holistic approach to transportation and access.
- Signage and wayfinding are important amenities to provide connectivity to trails and safe pedestrian and bicycle routes.
- Lighting is critical for personal safety.
- Shading for trails and streets improves comfort as well when walking and biking.

- Breathe sees potential for the Plan to help improve air quality through reduced VMT.
- UCD is interested in seeing if there has been a spike in pedestrian and bicycle injuries in recent years, and is particularly interested in analyzing injury data trends around e-bikes and scooters.

### Challenges

- COVID-19 challenges:
  - It has been challenging to successfully engage with people on-the-ground. Programs such as Breathe's Community Carshare and HEC's Walk With Friends program have been heavily impacted because of the need to meet face-to-face with residents.

- o There is a lot of Zoom fatigue, and not everyone wants to be on Zoom calls.
- o Programs and services have pivoted away from big events and shifted to virtual settings.
- Access to daily destinations is a big barrier for a lot of people, particularly to grocery stores and meal pick-ups. Students who don't have reliable transportation face challenges in picking up meals at school sites, which are more set up for vehicle pick-up.
- Lack of continuous sidewalks and crosswalks.
- Outside of the Sacramento downtown core, there are fewer bike lanes and people tend to bike on the sidewalk. People also often don't wear helmets.
- Shared active transportation spaces (especially with e-bikes and scooters) can lead to crashes and unsafe conditions between pedestrians and bikes.
- Specific areas of concern:
  - o American River access on Watt Avenue: one side of the river is well lit and maintained, while the other side is not and feels more unsafe.
  - o American River access at Discovery Park: lots of personal safety concerns with people experiencing homelessness on the trail.

Opportunities

- Short videos have been effective for AHA in promoting messaging around health. Rather than having Zoom meetings to educate people, it could be useful to provide short videos on social media and schedule virtual meetings for direct feedback as needed.

- Work with elected official districts to get the word out about community events.
- HEC works closely with the Twin Rivers Unified School District in North Sacramento and can support sharing information about the survey and workshops.

Phase 1 Workshop Summaries – November 10, 2020

Attendees

Project Team Staff

- Mikki McDaniel, Sacramento County Department of Transportation
- Otto Melara, Alta Planning
- Libby Nachman, Alta Planning
- Kiara Reed, WALKSacramento
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento

- Jordan Grimaldi, WALKSacramento
- Anne Okafor, WALKSacramento
- Julissa Rocha, Languages 4 You

**Afternoon Session 12:00 - 1:30pm**

- Zoom: 48 participants, including 9 project team staff
- Facebook Live: 15 participants

**Evening Session 6:00–7:30pm**

- Zoom: 28 participants, including 9 project team staff
- Facebook: 14 participants

**Workshop Summary**

Two workshops were held on Tuesday, November 10th for the Sacramento County Active Transportation Plan. The goal of the workshops were to increase awareness of the Active Transportation Plan, understand overarching concerns for walking, biking, and rolling, and

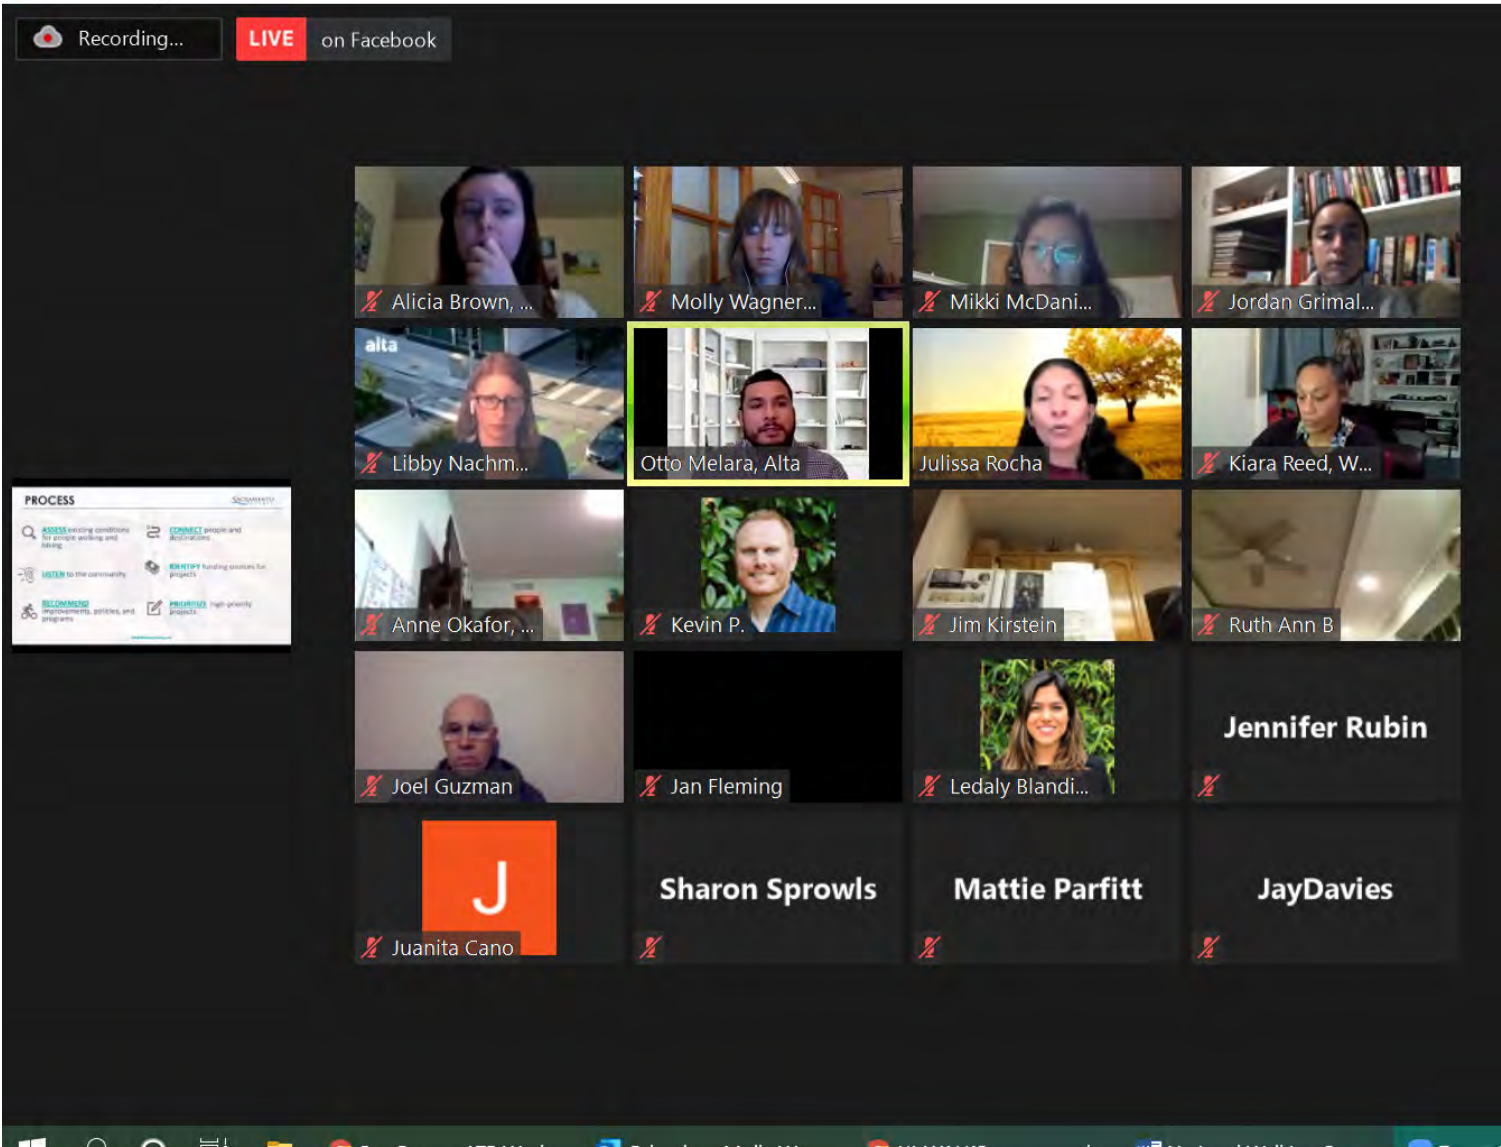

understand location-specific challenges and opportunities. The workshops began with a presentation about the Active Transportation Plan, with online polls and question and answer interspersed throughout. Simultaneous Spanish translation was provided for both of the workshops.

**Input Received**

**Goals and Priorities**

- Improving safety and improving access to destinations were the top-rated priorities for both the afternoon and evening workshops.
- Improve safety for everyone, especially people walking and bicycling.
- Develop more connected bicycle and sidewalk networks.
- Increase access to parks, schools, and other community destinations.
- Make walking and bicycling more comfortable.

- Improving access and connections is the foundation of a safe transportation network.
- Educate bike riders to ride in the same direction as auto traffic.
- Educate drivers about being more aware of people walking, biking, and rolling.
- Increase signage on bike trails and roads.
- Reduce speed limits through design, such as reducing vehicle lane widths and eliminating one-way streets.
- Be mindful of the needs of cane users and people with mobility, vision, and hearing disabilities.
- Transportation issues must be intersectional and center the voices and experiences of BIPOC.
- Create safer connectivity to transit.

Workshop 1 participants

Fall Workshop Afternoon Session (11/20/2020). 49 respondents

Fall Workshop Evening Session (11/20/2020). 13 respondents.

## Challenges

- Residents generally don't feel safe biking, walking and rolling.
- If bikes and pedestrians don't have alternate connection options, they get funneled into the same transportation corridors with cars, which is inherently less safe.
- As far as sidewalk maintenance goes, many miles of sidewalks are hazardous for pedestrians and wheelchair users.
- Bikers tend to ride against traffic, which is more dangerous than riding with traffic. With the proper infrastructure, this could make biking with traffic feel safer.
- There are a lot of freeway off/on ramps in this community that can create obstacles for folks walking and biking.
- Specific areas of concern:
  - More all-way stop signs and crosswalks leading to river trails, especially at Maine Avenue, Dredger, and Winding Oak.
  - Need more buffered bike lanes on busy streets, such as Franklin Boulevard in Elk Grove.
  - Missing sidewalk segments on Marconi between Ashbourne and Morse.
  - There is not a safe way to cross from Fair Oaks onto Morse without going against traffic, which is very dangerous.
  - Carmichael has several street arteries with minimal sidewalks and utility poles that make it difficult to walk and bike.
  - Jackson Highway has little or no shoulder for biking making it dangerous for bikers and also frustrating for motorists trying to pass. Widening the road to make space for bicyclists is ideal.

- Frontage streets, such as along the south side of El Camino Avenue between Bell and Howe, are dangerous and difficult for pedestrians to maneuver.

## Opportunities

- Data and policy opportunities:
  - Look into the county's ADA transition plan recommendations for inclusion into the ATP.
  - Get involved in the Caltrans Active Transportation Plan for District 3 to coordinate around freeway ramps and overpasses.
  - Use data sources such as Strava Metro and other Mobility Crowd Sources to capture a larger audience of where people are biking, and to see what connections would be most useful.
  - Map pedestrian and bicycle injuries and related citations for the County.

- o Prioritize funding for pedestrian and bicycle projects.
- o Coordinate with city plans, such as City of Sacramento.
- o Work with utility agencies to underground utilities.
- Design opportunities:
  - o Put up speed limit signs at closer intervals to improve driver awareness and enforceability.
  - o More arrows indicating correct walking and biking directions on trails.
- Outreach opportunities:
  - o Engage with schools, parent groups, business districts, climate change and biking organizations (SABA, 350 Sac, Sacramento Bicycle Kitchen, Bicycle Advocates of Rancho Cordova, etc), college and high school students, senior living communities, and faith communities.

- o Utilize Next Door, apartment complex newsletters, and other local communication networks.
- o Conduct intercept interviews at grocery stores, transit stops, and farmers markets.
- o Coordinate with utility districts and SacRT to share information.
- o Put informational signage at dangerous intersections.
- o Ensure that the online map is in a mobile-friendly format.

**Key Questions from Attendees**

- Data
  - o Are there data (police) available to study and to think about possible improvement recommendations?
  - o Is there any comprehensive data, for Sacramento County, on walkability, sidewalk conditions, bike lanes, or pathways for no vehicle transportation?

- o Have the bike/ped injuries and related citations been mapped for our county?
- o Where do we find the results of your current assessment of existing conditions?
- Safety + Security
  - o Are there any measures to reduce vehicle speed on residential streets (i.e. traffic calming)?
  - o I had yet another bike (with a good lock) stolen this year from a secure location. This is a serious problem in our area. What can we do about it as part of this plan?
  - o Are there any plans in place for better street cleaning to reduce impacts on cyclists?
  - o How do you plan on keeping people safe who are not in cars?
  - o How does the plan address improvements that intend to make women feel more comfortable and encouraged to ride?

- o What does “comfortable” mean?
- Plan + Process
  - o What influence do we have upon our desires?
  - o What are the long-term strategies for maintaining any new infrastructure as well as the old?
  - o Are there any education and outreach programs to elementary schools promoting bike to school and walk to school?
  - o How does the county's plan mesh with the work being done in some of our cities (e.g., the City of Sacramento)?
  - o I understand that County is considering joining the Age Friendly Network. Will you build in those considerations into the plan?
- System Connectivity
  - o How soon can we connect all schools with bike lanes, especially in regards to crossing Arden and Alta Arden?
- o What is being done regionally to connect individual city bike trail systems?
- o Is there a chance Sacramento will be home to more bike boulevards, especially through downtown/ midtown?
- o What is Sacramento County doing in regards to electric vehicles?
- o I don't quite understand "connect bike lanes and sidewalks." Does this mean connecting them to each other? Improving the bike network?
- o What is your definition of “human powered” transportation? Does this include electric bicycles, electric scooters, electric skateboards, etc.?
- Funding
  - o How would the plan be funded and what is the process for building the solutions identified in an active transportation plan?
- o About sidewalk maintenance, many miles of sidewalks are hazardous for pedestrians and wheelchair users. What party is responsible and is there funding for improving sidewalks?
- Infrastructure
  - o As a bike commuter, are there plans to install more bike friendly 'trigger' buttons at stoplights?
  - o How will ongoing maintenance concerns be addressed in the plan? (e.g. repairing curbs, cleaning up glass on sidewalks or bike lanes, etc.)
  - o Are green bike lanes cost prohibitive? Would be awesome if every bike lane was painted green.

POP-UP EVENTS

SACOG Youth Leadership Academy  
- May 15, 2021

Attendees

2 project staff, 2 project partners, and 25 students participated in a virtual pop-up meeting through Zoom.

- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Rosie Ramos, SACOG
- Jazmin Luna, Pro Youth and Families
- 25 students

Input Received

Goals and Priorities

- When participating in the “dream street” activity, students shared that their ideal streets included lots of shade and vegetation, community gardens, wide walking paths separated from cyclists, more bike lanes, and better access to entertainment.
- Popular destinations that students walk or bike to included school, friends’ houses, local cafes and parks, markets, and work, and around the neighborhood.
- Safety and equity were the top two factors students indicated for prioritizing pedestrian and cyclist improvements. Several students shared their concerns and observations related to unequitable distribution of active transportation facilities throughout the county, such as the disparities between Elk Grove and South Sacramento.

Challenges

- Time, distance, personal safety, sidewalk gaps, unmarked crossings, uneven or unmaintained pavement, and lack of lighting were major barriers when walking or biking for students.
- Bus stop siting was identified as another challenge. Students reported bus stops in their neighborhood being located at busy intersections with minimal-to-no crossing facilities, making it unsafe to access transit by foot or bike.
- At busy intersections with unmarked crossings, students reported frequently observing people running into the street to use center turn lanes as median refuge islands, resulting in several near-misses.

## Opportunities

- Overall, sidewalks and crosswalks were students' top priorities for pedestrian improvements. For bicycling improvements, students preferred shared-use paths and buffered bike lanes because they provide the highest degree of separation between cyclists and cars.
- Students had concerns related to Class II bike lanes because of the minimal separation between cyclists and drivers. They also frequently observed parked cars occupying the Class II bike lanes in their neighborhoods.
- In terms of pedestrian improvements, students had concerns about median refuge islands because they thought refuge islands might encourage people to run into traffic as they currently observe people doing. Thus, students recommended median refuge islands be paired with crosswalks and other pedestrian facilities to promote safety and discourage dangerous crossing behavior.
- Future opportunities to engage SACOG's YLA students should be explored in future project phases as the group provides a critical youth perspective and already possess background knowledge on planning and active transportation.

What priorities are most important to you?

Where do you like to walk, bike, or roll to?

Which pedestrian improvements would you like in your community?

Vineyard Bicycle Tune-up – May 21, 2021

Attendees

2 project staff, 1 project partner, and 14 community members participated in an in-person pop-up event at Don and Brenda Nottoli Park in Vineyard. The pop-up was held in conjunction with a free community bicycle tune-up hosted by the 50 Corridor Transportation Management Agency.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Leah Barrett, 50 Corridor Transportation Management Agency
- 14 community members

Input Received

Goals and Priorities

- Overall, participants typically liked bike infrastructure with greater separation from vehicle traffic. Participants indicated a strong preference for Class I shared use paths and Class IV protected bike lanes.
- When asked about pedestrian infrastructure, participants were generally interested in improving crossings, particularly at major intersections.

Challenges

- Cars drive fast down neighborhood streets in Vineyard.
- Calvine Road and Elk Grove Florin Road is a really dangerous intersection for pedestrians to cross because there’s so much traffic.
- Biking into Elk Grove from Vineyard is difficult because there are few routes, no sidewalks, and fast-moving traffic.

- One participant mentioned not being able to bike to work because there are no bike lanes or only Class II bike lanes, which feel unsafe for biking on.
- Protected bike lanes are difficult for drivers to navigate because they make the road more narrow.

Opportunities

- Participants indicated a need for crossing improvements and generally liked strategies such as slip-lane removal, leading pedestrian intervals and restricting right-turn movements on red lights, and rectangular flashing rapid beacons.
- Participants liked bike boulevards as a way to slow down cars in the neighborhood to make it safer for biking.
- Participants liked the proposed Class IV protected bike lanes for Howe Avenue, Watt Avenue, and other similarly busy roads.

- Participants generally liked shared-use paths because they are completely separated from cars, although there were some concerns with pedestrian and bicycle conflicts.
- Participants generally liked the proposed buffered and protected bikes lanes in North Vineyard, specifically the proposed buffered bike lane on Bradshaw.
- Participants asked whether bike bridges would be included in the Plan and indicated a desire for a bridge over the American River Trail near the Watt Avenue access point in order to get from the south side to the north side.

### Sacramento Native American Health Center - May 17, 2021

#### Attendees

2 project staff and 3 community members participated in a virtual pop-up meeting through Zoom.

- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- 3 community members

#### Input Received

#### Goals and Priorities

- As part of the “Dream Street” activity, participants shared that their ideal streets were streets where children could safely and comfortably play, featuring wide sidewalks, traffic calming elements, and lots of shade. Participants also emphasized the desire for community spaces, edible plantings, and mixed-use development that makes it easy to access destinations by foot or bike.

- Participants’ top priorities for active transportation improvements were safety and implementation. Participants shared their experiences and observations related to long-term disinvestment from pedestrian and cyclist infrastructure in their neighborhoods as compared to higher income areas in the county. Thus, participants were eager to see improvements in their community as soon as possible.

What priorities are most important to you?

Mentimeter

Which pedestrian improvements would you like in your community?

Mentimeter

Challenges

- Parents do not feel comfortable allowing their children walk or bike alone due to concerns related to personal safety and inadequate active transportation infrastructure.
- Participants felt that their communities have largely been left out of city or county-led planning efforts and, thus were somewhat skeptical of the Plan’s goals to bring improvements to their neighborhoods.
- Sidewalk gaps, personal safety, and fast-moving traffic are major obstacles participants face when walking, biking, and rolling in the county. Specific areas of concern included:
  - o Fast moving traffic, sidewalk gaps, and homeless encampments along Lemon Hill Avenue

- o Sidewalk gaps along 65th Street
- o Major homeless encampments and reported sex work south of Stockton Boulevard and Lawrence Drive

Opportunities

- Participants felt that their community would benefit from education campaigns for drivers, pedestrians, and cyclists alike to raise awareness for road safety.
- One participant is an active member of the Indigenous community in Sacramento and has direct connections to the annual Powwow, which could provide future opportunities to better engage Native-identifying residents.
- Another participant has connections to the Hmong/Lao Community Center along Lemon Hill Avenue, which could provide future opportunities to better engage the Hmong and Lao communities in Sacramento.

- Overall, participants liked all of the proposed pedestrian infrastructure improvements, particularly crosswalks, sidewalks, Rectangular Rapid Flashing Beacons, and lighting.
- Participants preferred cyclist improvements that afforded the highest degree of protection or separation from cars, such as the buffered bike lanes and separated bikeways. However, one participant had concerns related to the parking and buffered bike lanes due to potential conflict between cyclists and cars.

Resources for Independent Living - April 28, 2021

Attendees

2 project staff, 1 project partner, and 3 community members participated in a virtual pop-up meeting through Zoom.

- Molly Wagner, WALKSacramento
- Alicia Brown, WALKSacramento
- April Wick, Resources for Independent Living
- 3 community members

Input Received

Goals and Priorities

- Make sure people with disabilities are fully integrated into the community and have the choices to get where they need to go or do what they want to do.
- Participants' "dream streets" included:
  - o More greenery

- o Protected bike lanes and crosswalks (such as pedestrian hybrid beacons)
- o Pedestrian-scale lighting
- o Sidewalks that are wide enough to accommodate restaurant seating as well as people using wheelchairs
- o Cane lanes that provide a tactical strip for canes to follow, particularly for winding trails
- o Integration of audible intros for storefronts to provide information on what the store is
- o Tactile crossing indicators, which can provide benefits to both blind and low vision and deaf and hard of hearing pedestrians

Challenges

- Audible signals are not integrated consistently and often get rejected due to noise complaints from neighboring residents.
- Drivers do not yield and tend to cut pedestrians off in the middle of the

street while crossing. One particular location where this consistently occurs is Florin and Amherst.

- Audible signals and push buttons are often not ADA accessible. Push buttons for different crosswalks will be located on the same pole, when they should be located parallel to the crossing so that people who are blind can walk up and align themselves to the crosswalk. Additionally, push buttons may be set back far from the curb where people using wheelchairs or mobility devices cannot reach them.
  - o An intersection where this challenge occurs is Fruitridge and Freeport. One participant mentioned that she does not cross here out of fear of being hit, although several of her students cross here to access the bus to get to community college. While this particular intersection is located in the City of Sacramento, proper push button alignment and ADA compliance should also be a priority for County intersections.

## Opportunities

- While buffered and separated bikeways along arterial streets are valuable for improving safety, project implementation should also be balanced with cost-effectiveness. Existing neighborhood streets may already provide safe alternative routes to arterials.
- Many people use Google Maps when planning bike routes, but it isn't always up-to-date with new bike infrastructure. Will this be coordinated with map companies in the future to update?
- Does the County have ADA standards for placement of push buttons at intersections? If not, some standards and guidance should be incorporated in this plan. As an example, push buttons should always be located parallel to the crossing that they are connected to.
- Some recommended improvements to crossings, particularly for people who are blind and low vision, include:
  - Tactile signals rather than audible signals to indicate when it is safe to cross. There is an assumption that if you are blind you can hear really well, but that is just not the case. This type of signal is also better for people who are deaf and hard of hearing, as well as for quieter neighborhoods.
  - In San Francisco, there is an intersection with a lever that vibrates when the walk sign is on in addition to an audible signal.
  - The UK has one of the best crossings for people who are blind and low vision – there is a plate in braille that tells the name of the intersection and a cone that spins when it's safe to cross.
- RRFBs and Pedestrian Hybrid Beacons may be challenging for people who are blind and low vision. Because cars may not yield, is there a way know when it is safe to cross?
  - More education and outreach to blindness organizations about these types of crossings may be needed for people to become familiar with this infrastructure.
- Trails for people who are blind and low vision:
  - There needs to be a better way for people who are blind or low vision to access call boxes on trails, potentially adding an audible message or geomarker for people to locate them via phone.
  - Geomarkers for trail entrances and exits are also important to know where you are and where you can get on or off the trail. Because there are no labeled or audible intersections like on a street network, it can be difficult to know how far you've gone and where you're at.

South Sacramento La Familia – May 26, 2021

Attendees

3 project staff, 2 project partners, and 5 community members participated in a virtual pop-up meeting through Zoom that was held in English and Spanish.

- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Nahdyexli Valdez, La Familia
- Maria Perez, La Familia
- Mikki McDaniel, Sacramento County
- 5 community members

Input Received

Goals and Priorities

- As part of the “Dream Street” activity, participants shared that their ideal streets have plants and vegetation, places to ride bikes away from cars, curbs, bright green bike paths

connecting to other streets (like in downtown Sacramento), trees for shade, and sidewalks that are wide, clean, and uncracked.

- Participants’ top priority for project implementation was safety, followed by equity and connectivity.

Challenges

- Sidewalk gaps are a major challenge, especially around schools. One participant noted missing sidewalks in the neighborhood around Will C. Wood Middle School as being a significant safety barrier.
- Lack of tree shade and urban greening within South Sacramento neighborhoods makes walking, biking, and rolling feel uncomfortable.

Opportunities

- For pedestrian improvements, participants indicated a desire for more sidewalks (and particularly detached sidewalks with landscaped buffers), lighting, curb extensions, and crosswalks in their communities.
- For bicycle improvements, participants indicated a desire for greater separation from cars, with Class IV separated bikeways being the highest priority. Class I shared use paths and Class IIb buffered bike lanes were also improvements that participants liked.
- Pedestrian and bicycle improvements that participants were less interested in or had concerns about included median refuge islands and Class II unbuffered bike lanes. Participants did not like Class II unbuffered bike lanes because they prefer greater separation from vehicles.

# What priorities are most important to you?

Mentimeter

# Which pedestrian improvements would you like in your community?

Mentimeter

West Arden Arcade/International Rescue Committee - April 20, 2021

Attendees

4 project staff, 3 project partners, and 13 community members participated in a virtual pop-up meeting through Zoom that was conducted in English and Farsi.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Libby Nachman, Alta Planning + Design
- Mikki McDaniel, Sacramento County DOT
- Yasi Vedad, International Rescue Committee
- Alyssa Serrano, International Rescue Committee
- Margeaux Fischer, International Rescue Committee
- 13 community members

Input Received

Goals and Priorities

- Prioritize safety and connectivity in active transportation improvements.
- Prioritize access to parks, green space, and transit.

Challenges

- Trash and poor lighting within neighborhoods in West Arden Arcade currently contribute to lack of safety while walking and biking. In particular, the Carmichael area is very dark at night and could benefit from more pedestrian-scale lighting to encourage active transportation.
- In the neighborhood around Watt Avenue and Edison Avenue, there is a lack of parks, trails, and other public green space for walking.

Opportunities

- Overall, participants liked Class I and Class IV bike lanes due to greater separation between cars and people biking. Participants also liked pedestrian median islands as a way to make crossings feel safer.
- One participant wanted to see more lighting, street decorations, and seasonal trees and vegetation along walking and biking routes, similar to the streets from her hometown in Turkey.
- Coordinate with park districts and utility districts to improve lighting along streets and at park sites.
- Consider opportunities to increase tree canopy and urban greening in conjunction with pedestrian and bicycle improvements.

# What priorities are most important to you?

Mentimeter

West Arden Arcade/International Rescue Committee Event

Delta Area

Attendees

4 project staff, 1 project partner, and 2 community members participated in a virtual pop-up meeting through Zoom.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Otto Melara, Alta Planning + Design
- Mikki McDaniel, Sacramento County DOT
- Lindsey Liebeg, Sacramento County Fam Bureau
- 2 community members

Input Received

Goals and Priorities

- Improve safety and comfort for walking, biking, and rolling in cities’ main streets or commercial centers, between marinas, and between cities or towns in the unincorporated Delta region.

- Provide opportunities for recreational walking, biking, and rolling.
- Prioritize safety and connectivity in active transportation improvements

Challenges

- Given the rural nature of the unincorporated Delta region, making trips or running errands by foot or bike is difficult due to long distances between destinations.
- Little to no streets in residential or commercial areas have sidewalks. In most places, pedestrians and cyclists must share the road with fast-moving cars, large trucks, and large farming equipment (especially during harvest season) without any physical separation. In addition, the roads are very narrow in many areas, often with no shoulder or gutter, forcing pedestrians and cyclists to be in even closer proximity to vehicular traffic. Where shoulders or gutters do exist, they are often unmaintained, resulting in weed growth and uneven surfaces that make for challenging and inaccessible terrain.

- Many roads in the Delta are very windy, which decreases visibility of pedestrians and cyclists to cars and vice versa.
- Travel between cities and town, such as between Walnut Grove and Locke, is especially dangerous because the posted speed limit increases to over 40 miles per hour and there is no separation between vehicular traffic, pedestrians, and cyclists.
- The rise in navigation apps has led to an increase in cars travelling on secondary roads, such as levee roads and Highway 160, as drivers seek to bypass traffic on major highways, such as I-5. These secondary roads are not built for heavy traffic and drivers do not respect speed limits, creating unsafe conditions for pedestrians and cyclists.
- Specific areas of concern include:
  - Levee roads in the North Delta Region (specifically in Clarksburg and Courtland)
  - The “Delta Loop”

## Opportunities

- Biking is already a popular form of travel among Delta residents, which increases the likelihood of future cyclist improvements and treatments in the area to be well-used.
- Participants were highly interested in Rectangular Rapid Flashing Beacons for crossings, as well as Class I shared-use paths for biking. Participants indicated that advisory shoulders seemed confusing for both cyclists and drivers alike, and would not be desirable without additional signage or education.
- One participant mentioned the possibility of piloting low-cost solutions, such as providing pedestrians with high-visibility flags for crossing streets, as seen in Salt Lake City, Utah.
- There is an approximately half mile segment of River Road between Locke and Walnut Grove that is often used by people walking. Safety of pedestrians would significantly benefit from the installation of sidewalks along this segment, and would encourage more active travel between the two communities.
- Local businesses rely heavily on foot traffic. Thus, partnering with local chambers of commerce, business associations, and local business owners for future engagement efforts present opportunities to stimulate the local economy and increase public participation and buy-in.
- Even though many levee roads are officially closed to the public, they are still widely used by Delta residents for recreation, such as the patrol road that runs from Oxbow Marina to Tyler Island Bridge Road. Partnering with private property owners could potentially expand opportunities for walking, biking, and rolling in the Delta, especially for facilities completely separated from vehicular traffic.
- Open space alongside main highways and thoroughfares presents opportunities for Class I side paths to promote safe and comfortable travel between cities, towns, and marinas.

## Foothill High - May 6, 2021

### Attendees

2 project staff, 1 project partner, and 19 students participated in a virtual pop-up meeting through Zoom.

- Alicia Brown, WALKSacramento
- Kiara Reed, WALKSacramento
- Andrea Villani, Foothill High Leadership Class Teacher
- 19 high school students

Input Received

Goals and Priorities

- When asked to share their ideal “dream street”, students indicated that they would like to have elote carts, slushies, popcorn, ice cream, an anime store, and more trees.
- Students’ favorite places to walk, bike, and roll to included parks, friends’ houses, restaurants and food stores, trails, schools, and around the block in their neighborhoods.
- Overall, students’ top priorities are for infrastructure projects that have the greatest safety, comfort, and community need.

Challenges

- Personal safety was identified as a major challenge for walking, biking, and rolling in the neighborhood, especially for women. Getting lost was also a concern.
- Heat and weather conditions was another factor for students in whether or not they feel comfortable using active transportation. A lack

of shade trees in particular was highlighted as a desire to improve comfort while walking.

- Lack of sidewalks and narrow sidewalks makes walking and rolling feel unsafe due to proximity to traffic.
- Many destinations don’t have safe places to lock and store bikes, skateboards, scooters, and other belongings.
- Walking along Hillsdale Boulevard feels unsafe due to narrow sidewalks and speed of traffic. When asked about the bike lanes, one student mentioned that they feel safe to bike on currently, although other students were also interested in additional buffered space from car traffic.
- Elkhorn Boulevard was highlighted as an unsafe place to walk or bike due to speed and volume of traffic. Students indicated that many people don’t walk there currently.

Opportunities

- Overall, students want more separation between pedestrians,

bicyclists, and cars. The types of infrastructure that they most want to see in the Foothill Farms neighborhood include crosswalks, sidewalks, and Class IIB buffered bike lanes. For crossing treatments, students were most interested in high visibility striping and leading pedestrian intervals.

- Some of the types of infrastructure improvements that students’ did not like included curb extensions, median refuge islands, and Class I shared use paths. For curb extensions and median refuge islands, students mentioned that cars crash into them (and physical property as a result), and that drivers still tend not to yield to allow pedestrians to finish crossing. For shared use paths, students indicated that bicyclists can be aggressive and were concerned about pedestrian and bicycle conflicts.
- Other investments that students would like to see include shade trees and wayfinding.

- 17 attendees via Zoom
- 4 attendees via Facebook Live

Spring Evening Workshop.

## Workshop Summary

Two workshops were held on Tuesday, May 18th and Thursday, May 20th for the Sacramento County Active Transportation Plan. The goal of the workshops was to share the draft infrastructure recommendations that were developed after Phase I and to gather feedback on what types of infrastructure recommendations participants liked, didn't like, and opportunities for improvement. The workshops began with a presentation about the Active Transportation Plan, followed by a demonstration of the webmap tool. Online polls and open discussion portions were interspersed throughout to get a better sense of project priorities and preferences on draft infrastructure recommendations.

## Input Received

### Goals and Priorities

- When asked about what they would like to see on their "dream streets", workshop participants indicated wide and well-maintained sidewalks, trees,

streets without cars, 20mph roads, protected and separated bikeways, audible signals, lighting, smooth pavement without potholes, and seating.

- Across both of the workshops, participants overwhelmingly indicated safety as the highest priority for project implementation (48% on May 18th and 50% on May 20th). At the May 18th workshop, the second highest priority was community need (18.5%) and the third highest priority was access (15%). At the May 20th workshop, community need, equity, and access were all tied for the second highest priority (14%).
- Access from a disability perspective was highlighted as an important priority for many participants across both of the workshops.
- Sidewalk infill and maintenance was another priority that participants brought up across both workshops. In particular, there is a need for prioritizing sidewalks near schools for a Safe Routes to School approach.
- First and last mile access to and from transit is important for ensuring that people are able to complete trips to any destination, especially by walking or rolling.
- Participants wanted better connections between neighborhoods to commercial and recreational destinations.
- Overall, participants expressed a desire for greater separation of active transportation modes from vehicle traffic.
- Other priorities included feasibility of funding, focusing improvements on streets that don't have room for bike lanes, and addressing pre-existing issues before starting new projects.

Spring Evening Workshop. 14 Respondents.

### Preferred Infrastructure Improvements

- Participants were invited to participate in a poll about desired pedestrian infrastructure improvements in their communities. Participants were able to vote for as many improvements as they liked.
  - At the workshop on May 18th, the top three pedestrian improvements that participants wanted to see in their communities were curb extensions (17%), sidewalks (15%), and crosswalks (15%).
  - At the workshop on May 20th, the top three pedestrian improvements that participants wanted to see in their communities were sidewalks (25%), leading pedestrian intervals (20%), and curb extensions (15%).
- Participants were invited to participate in a poll about desired bicycle infrastructure improvements in their communities. Participants were able to vote for as many improvements as they liked.
  - At the workshop on May 18th, the top three bicycle improvements that participants wanted to see in their communities were protected bike lanes (27.5%), bike boulevards (20%), and buffered bike lanes (20%).
  - At the workshop on May 20th, the top three bicycle improvements that participants wanted to see in their communities were shared use paths (33%), buffered bike lanes (33%), and protected bike lanes (16%).
- In addition to the above infrastructure preferences, participants also indicated a need for the following improvements to comfort and safety of walking, biking, and rolling:
  - There need to be more pedestrian oriented street lights, especially at intersections. Lack of streetlights was a particular issue in the Carmichael neighborhood.
  - There is a need for sidewalk infill in neighborhoods that do not currently have sidewalks, such as Fair Oaks.
- There need to be more consistent implementation of pedestrian pushbuttons. For example, when crossing from Cottage Way to Winding Way across Watt Avenue, the pedestrian pushbutton is only on one side of the street.
- Additional infrastructure that participants generally supported or expressed a desire for included:
  - Protected bike lanes
  - Median refuge islands
  - Leading pedestrian intervals
  - Curb extensions
  - Roundabouts could be considered in place of signalized intersections where feasible

Spring Evening Workshop. 14 Respondents.

**Which pedestrian improvements would you like to see in your community (select all the apply)? If you select "other," please type your response in the chat.**

**Which bicycle improvements would you like to see in your community (select all that apply)? If you select "other," please type your response in the chat.**

**Infrastructure Improvements of Concern**

- Participants were invited to participate in a poll about pedestrian infrastructure improvements that they have concerns with or would not want to see in their communities. Participants were able to vote for as many improvements as they did not like, with the option to say they liked all types of improvements.
  - At the workshop on May 18th, most participants responded that they liked all types of pedestrian improvements (29%). However, the top pedestrian improvements that participants did not want to see in their communities were median refuge islands (14%), pedestrian hybrid beacons (14%), rectangular rapid flashing beacons (9.5%), and curb extensions (9.5%).
  - At the workshop on May 20th, most participants responded that they liked all types of pedestrian improvements (50%). However, the top pedestrian improvement that participants did not want to see in

their communities was no right on red signals (50%).

- Participants were invited to participate in a poll about bicycle infrastructure improvements that they have concerns with or would not want to see in their communities. Participants were able to vote for as many improvements as they did not like, with the option to say they liked all types of improvements.
  - At the workshop on May 18th, most participants responded that they liked all types of bike improvements (39%). However, the top bicycle improvements that participants did not want to see in their communities were shared use paths (17%), buffered bike lanes (11%), and bike boulevards (11%).
  - At the workshop on May 20th, most participants responded that they liked all types of bike improvements (67%). However, the top bicycle improvements that participants did not want to see in their communities were bike

boulevards (17%) and protected bike lanes (17%).

- Participants indicated concerns with protected bike lanes for a variety of reasons, including that they take up too much roadspace, they are not safe for bicyclists if they are poorly designed, impacts to bus stop access, and impacts to accessibility overall, especially for people who are blind or low vision.
  - Participants were interested in learning more about the specific design of the proposed Class IV bike lanes, particularly their impact on bus stops along Howe Avenue, Fulton Avenue, and El Camino Avenue.
- Participants shared concerns with leading pedestrian intervals and other signal improvements, particularly how they will impact audible signals and people who are blind or low vision.
- Rectangular Rapid Flashing Beacons, pedestrian hybrid beacons, and other signal improvements must be

coordinated with audible signals to be safe for pedestrians who are blind or low vision. There were also concerns that flashing lights may cause headaches or seizures.

- Participants generally did not like shared use paths due to potential conflicts between pedestrians and bicyclists, and indicated that more education or fully separated facilities between pedestrians and bicyclists would be ideal.
- Additional questions and concerns about bike infrastructure included ensuring that cars would not use the bike lane as a passing lane and providing dedicated bike parking so that bikes, scooters, and shared rideables would not be left in the sidewalk.

### Challenging Locations

- Throughout both of the workshops, participants shared specific locations that remain challenging for walking, biking, and rolling. These locations include:

- The County previously removed a pedestrian and bike ramp at the Merrywood and Country Club Center in Arden Arcade, which restricts active transportation access.
- Large intersections that are difficult to cross include Arden Way and Cottage Way, and El Camino Avenue and Eastern Avenue.
- There is a Dutch Bros across from El Camino Fundamental High School that attracts a lot of traffic and is not pedestrian and bike friendly.
- A lot of people use active transportation along Winding Way between Fair Oaks Boulevard and Illinois Avenue, even though there are no sidewalks and there is not enough space to walk, bike, or roll.
- Scripps Drive was designed for vehicles, and the sidewalks were installed before ADA requirements. The sidewalks are at

an extreme angle and are also now broken.

- Madison Avenue has areas of the street that need repaving.
- There is a need for a bike path by Haggin Oaks and Howe Park.
- Sidewalks have been requested on Bell Avenue for access to Dyer Kelly Elementary and on Howe Avenue for access to Howe Ave Elementary, but have not been installed for years.

### Lessons Learned

- Tuesday, May 18th:
  - Stop sharing screen after discussion slide
  - End Zoom meeting to log everyone off before debrief
  - Interpretation worked well, including recording in Spanish
- Thursday, May 20th:
  - Make sure to engage with more members of the blind community

- o Make sure there's a similar # of bike and ped projects in final plan, or show in comparable terms
- o Mikki to chat with disability advisory committee about class IVs and transit access

Key Questions

- Funding
  - o To what extent will this plan be supported by funding? What is the commitment in resources to actually implement the plan?
  - o Are there any actual grants or other funding sources that are actively being pursued right now?
  - o Our community of Arden Arcade would receive a whole lot more money for transportation if it was an incorporated city. Would the County be supportive of establishment of new cities?
- Education and Programming
  - o Will there be any consequences for bicyclers who ride on sidewalks?

- o How will education for pedestrian safety be addressed to driving community?
- o Will safe routes to school specifically be addressed in this plan?

- System Connectivity
  - o How are County bike routes coordinated with City of Sacramento bike routes?
  - o What amount of collaboration are you doing with Rancho Cordova where shared boundaries are concerned, like Bradshaw Rd and Old Placerville Rd?
  - o How does this Plan intersect with SACOG's trails plan and also help provide connections with Sacramento's Transportation Priorities Plan?
- Disability Accessibility
  - o Who is on the technical advisory committee? In particular, people with disabilities need to be on the

technical advisory committee and part of the design process.

- o How does the webmap tool work for those visually impaired? Can it screen read?
- o Has the project established a list of mobility needs?
- o What are your plans to implement and install more audible signals? What, if anything, will the plan do to have a more formalized way of implementing these installments?
- o Will the blind community be consulted to determine which intersections will be most beneficial?
- Infrastructure and Design
  - o What is the typical vehicle speed that is considered conducive to a "walkable" community?
  - o Is there a pedestrian crossing option that has proven to be more effective at preventing collisions and pedestrian accidents? Crosswalks seem to be largely ignored by drivers.

# Digital Engagement Summaries

- o Will maintenance of existing sidewalks (such as lifted panels or trip hazards) be addressed as part of the Plan? Will it be a priority to make ALL sidewalks safe, specifically existing sidewalks, for pedestrian travel?
- o For Class IV bike lanes, are you coordinating with maintenance staff for sweeping/cleaning of the bike lanes? If a street sweeper cannot fit, what measures are being taken?
- o There are around 1500 bike projects but only 93 pedestrian projects. Given almost everyone is a pedestrian at some point but not all of us ride bicycles, why is the plan so bike heavy?
- o Is there a published schedule of sidewalk and road maintenance for the various county areas? Does this include limitations on funding for the various areas?
- o Are there plans to implement and install more pedestrian signals?

## ONLINE COMMUNITY SURVEY - WINTER 2020/2021

### Survey Statistics

During the first phase of community engagement, over 830 community members took the online survey. The survey opened in July 2020 and closed in January 2021. The survey was made available in both English, Spanish, and Russian. There were 832 English responses, 15 Spanish responses, and 4 Russian responses. The survey was sent out to multiple Sacramento County newsletter lists, post on social media, and distributed through partnerships with community-based organizations. A summary of survey findings is in the next section.

### Demographics

The survey was taken by a diverse range of Sacramento County residents. All age groups were well represented except the age 74 and older group. About half of residents identified as non-white (two percent American-Indian or Alaska Native, 12 percent Asian, 12 percent black, five percent Native Hawaiian or Pacific Islander, and 19 percent Latino. The survey respondents are 47 percent women, 42 percent men, and 4 percent nonbinary.

### Key Survey Takeaways

#### Pre-COVID travel behavior

Almost two-thirds of survey participants walked/ran for fun or exercise during normal times, and nearly half of participants walked to reach a destination (store, school, work, etc.). Over 40 percent of participants stated that they bicycle for fun or exercise, and

just under 30 percent said that they bike to destinations. Less than one-fifth of respondents indicated that they took public transportation. There were no substantial differences between respondents' use of modes between pre-COVID and current times. The one exception was a about a 10% drop in respondents taking public transit.

**Active Transportation to Destinations**

Respondents were asked what destinations they would walk or bike to if it was more comfortable and convenient. Four answer choices were selected by at least 40 percent of all respondents (in order from most to least selected): parks (60 percent), fun or exercise (56 percent), stores (54 percent), and restaurants/bars (41 percent). These are the destinations that residents are most likely to walk or bike to. Trips to/from school were only selected by 26 percent of respondents. In a separate question, parents of school-aged children were asked what

factors would encourage more walking and biking trips. The top four responses are safety (traffic-related), safety (crime-related), if the school was closer, and if there were more ways to cross the street along their route.

**Walking**

When asked how much they agree with, "I feel comfortable walking around in my community," only 15 percent of respondents strongly agreed. Over 45 percent of respondents were either neutral (33 percent) or disagreed (13 percent) with the statement. Over 50 percent of respondents indicated that they were concerned about being hit by a car and crime and personal safety. Poor or lack of streetlights and missing sidewalks were listed as concerns by over one-quarter of respondents. The top five changes that would increase respondent comfort (listed by over one-third of respondents) are safer ways to cross the street, slower traffic, building sidewalks where they are missing, better lighting for pedestrians, and fixing broken sidewalks.

**Bicycling**

When asked how much do you agree with, "I feel comfortable biking around in my community," only 9 percent of respondents strongly agreed. Over 59 percent of respondents were either neutral (38%) or disagreed (21%) with the statement. Over two-thirds of respondents indicated that they were worried about being hit by a car. Over one-third of residents indicated that they were concerned about crime and personal safety and the lack of bike lanes or paths to bicycle. Over one-quarter of respondents were concerned about having no streetlights at night and having no secure bike parking at their destination. Building more bike lanes/other dedicated facilities was the most selected improvement, by 55% of respondents. Three additional improvements were selected by over 40% of respondents: slower traffic, greater separation from vehicle traffic, and wider bike lanes.

### Interactive Web Map Summary - Summer 2020 - January 2021

The first phase of the interactive web map launched in summer 2020 and closed in January 2021. Over 420 comments were left on the interactive web map. Users could draw their current or preferred walking or biking routes and drop points at intersections or other locations that they had comments on. Users could like, dislike, and leave additional comments on others' routes and points. The public identified concerns on over 110 different roadway segments and over 70 intersections.

The following issues were noted throughout the County:

- Missing sidewalks are barriers
- Desire for safer routes to schools and libraries
- Safer park access
- More and enhanced river crossings
- Poor light rail station access
- Uncomfortable intersection crossings

- Desire for safer bicycle facilities

The most frequently mentioned corridors needing improvement were:

- Fair Oaks Boulevard
- Watt Avenue
- Whitney Avenue
- Cypress Avenue
- Bell Street
- Winding Way
- Madison Avenue

### Themes for Recommendations

Based on an analysis of both the concerns of people walking and biking and their stated preferences for potential improvements, the following themes should influence the development of pedestrian and bicycle recommendations.

- Parks, commercial areas, and entertainment districts are the most desired walking and biking destinations. The development of priority areas should include considerations for these destinations.

- Infrastructure safety improvements are the top items that would make parents more comfortable letting their children walk or bike.
- Enhanced and safer ways to cross the street and closing sidewalk gaps are important priorities for pedestrians in Sacramento County.
  - Improved crossings are especially important around schools.
- A super-majority of bicycling respondents are concerned about being hit by cars. Building low-stress, separated bikeways will make more people comfortable and attract additional bike trips.
- Sacramento County residents love to walk, run, and bike for fun and exercise. Improving access to trails and implementing neighborhood-scale improvements will create an attractive walking and biking environment for various trip types.
- Provide wider shoulders in rural areas.

Phase 2 Recommendations  
Webmap Comments - Spring  
and Summer 2021

The following three tables present all public comments from the website and interactive map during Phase 2 Engagement. Table B-1 includes general comments left via the website’s contact form. Over 30 website contacts and emails were received by the project team during the project. Table B-2 contains comments on sidewalk recommendations. Table B-3 has comments on recommended bicycle projects.

Table B-1. General Comments

Comment	Submission time	Category
On all bike paths please paint the names of the streets that that the exit takes you too. When you pass the access paths you don't know what street it takes you to.	10/3/2020 8:36	Wayfinding
Can you explain better what each of the class trails mean. Maybe when we click on the legend you can click on the class and there will be an EASY to understand explanation of the class.  Example: cars, no cars, horses, no horses, bigger lane next to road, width of trail, anything else you know that we don't know etc.	4/28/2021 18:14	Website
The street INDUSTRY- has multiple land owners, businesses and fencing. It does NOT go all the way through to Winona.  I can send pictures as it won't allow me to upload.  There is an OLD railroad track (on some private land) not being used and would make a perfect walking area- behind the businesses on Orange Grove (from Off Roseville Rd to Orange grove (next to Watt Avenue) no cars- perfect area to upgrade. The PBID would love to give this area 'a sense of place,' which connects the area.	5/7/2021 11:46	Trails
I appreciate the work that has been done on this, but there still needs to be considerable improvement in the downtown area (within 5 miles of downtown) for people who commute downtown for work.	6/10/2021 11:16	General
Hi, I'd like to comment but I'm not getting an option when I click on the map recommendation. I think the bike path and the sidewalk idea in Freeport and connection to Sacramento is perfect.	6/15/2021 17:02	Infrastructure

Table B-1. General Comments continued

Comment	Submission time	Category
Looking at your plans I very much like the bike trail concept . Regarding the sidewalk I would need to know how much additional room next to the road it would require. If we have to give up some of our property line and move fences & landscaping I would have issues with the project. My address is **** Freeport Blvd. 95832 .Best Regards, Bob Lake	6/16/2021 17:00	Sidewalks
I am excited to see the proposed bicycle paths proposed for the Herald area. A few sidewalks would be nice, like on Ivie Rd., by the school and post office and Herald Rd., by the store and park.	6/23/2021 18:07	Sidewalks
Love the buffered bike lane down Arden for Arden and Mariemont school kids and bikers trying to safely get to American Rive bike trail.  But how are bikers supposed to get safely across busy Fair Oaks using the bike boulevard from Los Molinos to Estates? There is no light there. Why not San Ramon to Wilhaggen where there is a light? That is the way I go instead of dangerous Arden (Maple Glenn—which could connect to Winding Creek BB—to La Sierra to San Ramon, Wilhaggen, Crondall to Estates)	6/24/2021 11:13	Infrastructure

Table B-2. Sidewalk Recommendation Comments

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
435	Anonymous	Sidewalk Gap	Bayou Way			Walkability to Airport	0	0	4/28/2021 16:48
436	Sarah R Morgan	Sidewalk Gap	Chicago Ave			Road is a narrow two lane with no sidewalks and have been run off the road in the past few months while I was running.	0	0	4/28/2021 17:26
437	Sarah R Morgan	Sidewalk Gap	Fair Oaks Blvd			Small area of sidewalk missing between Temple Park and shopping center on corner	0	0	4/28/2021 17:33
438	PATTY WAIT	Sidewalk Gap	Morse Ave	Keeney Way	Hurley Way	There are no side walks on Morse. There is a fair amount of traffic.	2	0	4/28/2021 17:39
439	Patricia Furey	Sidewalk Gap	Fair Oaks Blvd	Wedgewood Ave		Corner of Fair Oaks Blvd and Wedgewood in front of dental office. The sidewalk ends, at the north of entrance to parking lot. Positions pedestrians to be just a foot away from passing traffic. Very dangerous for pedestrians to navigate.	0	0	4/28/2021 18:37
440	Patricia Furey	Sidewalk Gap	Tarshes Dr			The entrance to Tarshes requires pedestrians to cross California Ave without a crosswalk. The concrete dividers that separate the foot path from the road are crumbling or gone. Cars turning east onto Tarshes take the corner fast without looking for pedestrians and drive into the designated walking lane.	0	0	4/28/2021 18:54
441	Patricia Furey	Sidewalk Gap	Fair Oaks Blvd	Wedgewood Ave		Continuation of improvement in front of Dental Office on the corner of Fair Oaks and Wedgewood.	0	0	4/28/2021 19:02

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
442	Fayzah	Sidewalk Gap	Bradshaw Rd			There are 2 sections with sidewalk gaps on the Rancho Cordova side, I'd like to see these resolved in conjunction with the City of Rancho Cordova.	1	0	4/29/2021 16:31
443	Mattie Parfitt	Sidewalk Gap	Bell St			There is no sidewalk to the corner. The walk button on the pole at this corner is more than 5' off the ground, too, which is ridiculous.	0	0	4/29/2021 20:13
444	Nancy Shigenaga	Sidewalk Gap	Locust Ave			Sidewalk needs to continue to Garfield	0	0	5/8/2021 8:44
445	Anonymous	Sidewalk Gap	Watt Ave			two sections west side of Watt near Kings/Chenu	0	0	5/18/2021 20:21
446	Anonymous	Sidewalk Gap	Marconi Ave			no sidewalk either side of Marconi—gap near Morse is a priority	0	0	5/18/2021 20:25
447	Giovanni	Sidewalk Gap	Vintage Park Dr			I think there should be a way to safely get to the park from the elementary	0	0	5/31/2021 17:15
448	Albert Q	Sidewalk Gap	South of Fisherman's Lake	North of Radio Rd	West of El Centro Rd	Need trails on the south side of the canal.	0	0	6/8/2021 16:26
449	Monica Placencia	Sidewalk Gap	Walnut Ave			I walk this road everyday with my dogs there isn't a sidewalk or shoulder. My kids ride their bikes to school and they are too scared to take this direct road. Please put a sidewalk here	0	0	6/8/2021 16:27
450	Alexa Mergen	Sidewalk Gap	Twitchell Island Road	Brannan Island Rd		I'm trying to indicate we need sidewalk gaps on Twitchell Island Road, Brannan Island Road along Seven-Mile Slough as well. Popular biking/walking areas.	0	0	6/8/2021 17:08

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
451	Matt	Sidewalk Gap	Jackson Slough Rd			Sidewalk improvements must be extended south on Jackson Slough Rd. to Brannan Island Rd.	0	0	6/8/2021 17:19
452	Matt	Sidewalk Gap	Brannan Island Rd			Sidewalk improvements are badly needed along Brannan Island Rd. (the 'Delta Loop', a popular boating/restaurant/sightseeing route).	0	0	6/8/2021 17:23
453	Dax-Conroy Gayle	Sidewalk Gap	Whitney Dr	Sue Pam Dr		Narrow edge no sidewalk safety or bicycle safety for children and adults walking to Carmichael Park, the largest park in the region. This part of Whitney Avenue has high rates of car travel to get to Fair Oaks Blvd.	0	0	6/8/2021 18:53
454	Lee Frederiksen	Sidewalk Gap	Landis Ave			Landis is very dangerous to walk on. It is narrow and no shoulders, and has a lot of traffic.	0	0	6/8/2021 20:08
455	Jill Sorenson	Sidewalk Gap	Becerra Way			This road is heavily used by elementary and high school students. It would be much safer with a sidewalk. Traffic has increased on Becerra due to the closure of the pick up parking lot at Mira Loma High School off of Edison. Parents now pick up via Becerra. There is heavy traffic with kids trying to navigate on bike and foot between Whitney and Edison. It can get very sketchy!	2	0	6/8/2021 20:15
456	Vincent King (SRPD)	Sidewalk Gap	South of Hanfield Dr/ Montefalco Way			Connect park to basin with future water supply project.	0	0	6/9/2021 12:29

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
457	Vincent King (SRPD)	Sidewalk Gap	Mendocino Blvd			Southgate will add sidewalk, but would love DOT help completing it along Mendocino.	0	0	6/9/2021 12:58
458	Vincent King (SRPD)	Sidewalk Gap	47th Ave			gap	0	0	6/9/2021 13:00
459	Vincent King (SRPD)	Sidewalk Gap	Orange Ave			link parks and schools	1	0	6/9/2021 13:01
460	Vincent King (SRPD)	Sidewalk Gap	Orange Ave	Persimmon Ave		gap. Link to Park and Community Center.	0	0	6/9/2021 13:04
-	Ruth Ann Bertsch	Comment				Morse here needs to slow down the cars. they think they're on an expressway when they turn from Arden onto South-bound Morse. Bike lanes are already present for some of this.			6/10/2021 15:57
-	Ruth Ann Bertsch	Comment				the cars need to slow down on Morse. People turn onto Morse from Arden acting as if it were a speedway. Bike lanes won't be enough.			6/10/2021 15:58
461	Ruth Ann Bertsch	Sidewalk Gap	Sierra Blvd	Barberry Ln	Larch Ln	it is a shame that we appear to be requesting sidewalks on the direct, straight but noisy and busy streets when we could be routing pedestrians through some of our most beautiful neighborhoods.	2	0	6/10/2021 16:07
462	Fayzah	Sidewalk Gap	Bradshaw Rd	Lincoln Village Dr		LPI (leading Ped Interval) would be nice to reduce conflict with northbound cars turning east at the intersection. Also the ped refuge in this crossing is too small to accommodate more than one person, like families or 2+ cyclists. Many cars use the slip lane that should not BE in the slip lane, and they don't yield to peds.	0	0	6/11/2021 11:10

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
463	Fayzah	Sidewalk Gap	Bradshaw Rd	Old Placerville Rd		LPI for signal here would be good. Also my kids, travelling northbound going home from Dollar Tree, have almost been struck by the cars turning north coming off Old Placerville (right on red) several times, and once I witnessed a similar near-miss with a woman travelling in an electric wheelchair ahead of me in the crosswalk. Having/using our right-of-way should not be so scary.	0	0	6/11/2021 11:28
464	Lee Frederiksen	Sidewalk Gap	Landis Ave			Landis Ave is extremely dangerous to walk along. It has a lot of traffic, is very narrow, and has no shoulders to step onto when a car is coming.	0	0	6/12/2021 7:29
465	A.B.	Sidewalk Gap	48th Ave			Sidewalk gap along 48th Ave. This is critical route for students traveling to school.	0	0	6/22/2021 17:55
466	A.B>	Sidewalk Gap	48th Ave	Wesley Ave	49th Ave	Sidewalk gap limits low-stress routes to school and the park.	0	0	6/22/2021 17:57
467	Anonymous	Sidewalk Gap	Wesley Ave			the sidewalks gap and crossings at Cuny Ave and Wesley do not make sense.	0	0	6/22/2021 17:58
468	Anonymous	Sidewalk Gap	Martin Luther King Jr Blvd	49th Ave		horrible connections because sidewalk is missing. Students have no where to walk.	0	0	6/22/2021 18:00
469	Sue Schooley	Sidewalk Gap	Buena Vista Ave	Corona Vista Way		this is a major route for high school students to get to BV high school, very fast traffic, yet no sidewalks on either side. high importance for Safe Routes to Schools	0	0	6/23/2021 17:08

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
470	Sue Schooley	Sidewalk Gap	Buena Vista Ave			both sides of Buena Vista lacking sidewalk and its a major route to BV for high school students (not sure if my earlier comment went through—might be duplicate)	0	0	6/23/2021 17:10
471	Maria Trefilova	Sidewalk Gap	Locust Ave			Missing sidewalk	0	0	6/23/2021 20:57
472	Maria Trefilova	Sidewalk Gap	Locust Ave	Hackberry Ln		Missing sidewalk	0	0	6/23/2021 20:58
473	Maria Trefilova	Sidewalk Gap	Hackberry Ln			Missing sidewalk	0	0	6/23/2021 20:59
474	Maria Trefilova	Sidewalk Gap	Locust Ave	Virgusell Cir		Missing sidewalk	0	0	6/23/2021 21:01
475	Maria Trefilova	Sidewalk Gap	Hackberry Ln			Missing sidewalk	0	0	6/23/2021 21:02
476	Maria Trefilova	Sidewalk Gap	Garfield Ave			Missing sidewalk	0	0	6/23/2021 21:03
477	Tamie Dramer	Sidewalk Gap	Watt Ave			There are no crosswalks or lights for safe ped/cycle crossing here.	0	0	6/24/2021 14:46
478	Dorothy Putnam-Smith	Sidewalk Gap	Cardinal Rd			No sidewalks for Children to school or bicycles. This thoroughfare is used a lot by people picking their children up from school, sidewalks are essential.	0	0	6/27/2021 13:10
479	Barbara Moore	Sidewalk Gap	Cypress Ave			Sidewalk on North side of Cypress between Dena Way and Pasadena.	0	0	6/27/2021 19:39

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
480	Heidi Satter	Sidewalk Gap	Mills Rd			Sidewalks needed for the safety of the many students at the nearby school. Safe walk routes to school may help reduce tremendous vehicle traffic.	1	0	6/29/2021 8:00
481	Dean Dal Ben	Sidewalk Gap	Starburst Way			Sidewalks are needed on both sides of Starburst Way from Sunnyfield Way to Jacinto Ave. Starburst Way is used by people walking to the North Laguna Creek Park as well as getting to Jacinto Ave to go to CRC and Barbara Comstock Morse elementary school. This area turns into a muddy mess during the rain and people walking or riding bikes in the street are in danger from vehicles driving on this roadway.	0	0	6/29/2021 16:43
482	Dean Dal Ben	Sidewalk Gap	Bruceville Rd			Gap is on west side of Bruceville Rd. A safe walkway is needed to walk safely north on Bruceville to get to CRC or Barbara Comstock Morse Elementary School or the library or go south on Bruceville to get to businesses near Bruceville and Center Parkway.	0	0	6/29/2021 16:51
483	Dean Dal Ben	Sidewalk Gap	Bruceville Rd			This section on the west side of Bruceville Rd leads to the several businesses located in the area defined by Bruceville Rd, Sheldon Rd. and Center Parkway. People need a safe way to avoid the heavy traffic on Bruceville Rd when they walk to or from this business area.	0	0	6/29/2021 16:59

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
484	Dean Dal Ben	Sidewalk Gap	Jacinto Ave			There is an interior sidewalk within the North Laguna Creek park along the northwest side of the park facing Jacinto Ave but this curves deeply within the park away from the road. For the safety and convenience of those walking in this area who want a more direct walking route, the city should provide a city sidewalk as normal near the road and not take advantage of park funds/bonds to pay for a city sidewalk vs. a park walkway.	0	0	6/29/2021 17:08
485	Lee Frederiksen	Sidewalk Gap	Landis Ave			Need sidewalks. Very dangerous to walk.	0	0	6/30/2021 10:43
486	Carrie Frederiksen	Sidewalk Gap	Landis Ave			Landis Ave is very dangerous to walk/bike on.	0	0	6/30/2021 10:46
487	Scott Harger	Sidewalk Gap	Watt Ave			Heading South on the west side of Watt the sidewalk abruptly ends and a pedestrian is forced out onto Watt.	0	0	6/30/2021 14:46
488	Scott Harger	Sidewalk Gap	East of Watt Ave			This is a drive way into the Telephone Building. The cross slope of the driveway can force a wheelchair user into oncoming traffic. Hazardous for a hand cycle.	0	0	6/30/2021 14:51
489	Scott Harger	Sidewalk Gap	Marconi Ave			This is a well used pedestrian and bike Path of travel, to access Rayleys and bus stops. Both sides of Marconi need to be addressed.	0	0	6/30/2021 14:57

## Appendix C: Project Recommendations and Prioritization

# Introduction

This section presents an approach for prioritizing the list of active transportation projects that will be identified countywide. This approach includes a summary of the prioritization process, identification of preliminary prioritization categories, and review of the proposed criteria used for scoring of each category. A brief overview of additional factors that can affect the programming of projects for implementation after prioritization has been finalized are presented at the end of this memorandum. These questions include a discussion of how equity and Environmental Justice Communities should be considered.

The type of project will affect the prioritization process. For example, bicycle facilities are generally used for longer distance or regional travel, and so will be scored at the corridor level, while pedestrian projects have more local relevance and will be scored at the individual project level. However, it is possible to bundle both bicycle and pedestrian projects together to form larger "Complete Streets" improvement packages.

# Prioritization Process

The project prioritization process includes the following steps:

- **Identification of categories.**

Development of the prioritization categories in coordination with the project team along with a breakdown of the meaning and relevance of each category to confirm purpose and understanding of the purpose and scope of the process. The categories used in the process follow the identified goals for the project.

- **Weighting of Criteria.** The criteria will be weighted to determine their overall contribution to the project score.
- **Initial Project Scoring and Calibration.** Based on the selected weighting factors and local scoring criterion, the prioritization analysis will be performed to establish a preliminary ranking of projects for review by the project team. To facilitate the team's review, the summary may include development of charts, maps, tables and/or infographics.

# Prioritization Categories

Prioritization categories address a range of local needs and allow differences between projects to be identified. To ensure that the prioritization process follows the identified goals of the project, each of the proposed categories are associated with a goal as follows:

- Safety and Comfort - This project is located on a facility with an observed high crash frequency and has potential to improve safety. Safety factors will include whether or not a project is located on a High Injury Corridor and if any recent crashes have occurred related to that specific location or segment. Comfort factors depend on if this project improved the ranking of the facility with regards to the Bicycle or Pedestrian Level of Traffic Stress analysis and the Caltrans Bikeway Selection Guide.

- Connectivity and Access - This project improves accessibility to key destinations via the bicycle or pedestrian network and connects to networks in incorporated cities or regional trails.
- Equity - This project is located within an Environmental Justice Community.
- Implementation - While many factors affecting implementation cannot be quantified easily before prioritization, community support represents a critical element of project feasibility. Projects that are community-identified challenge areas or recommendations will be prioritized.

While this list is expected to include most prioritization categories, additional categories can be identified if desired. Also, specific categories of projects can be pulled out to be ranked or identified separately, such as bicycle versus pedestrian projects, or regional trails.

# Prioritization Scoring Criteria

The County will first assign scores to each category, and then create a combined score by weighting the score for each category by the relevant local weighting factor. Each prioritization category has been given a recommended scoring criterion based on various factors related to each category. The proposed prioritization scoring for bicycle and pedestrian projects are provided in Table C-1. Preliminary recommendations for criteria scores are also provided.

# Weighting of Prioritization Categories

An appropriate weight for each prioritization category will be in consultation with the county and other relevant stakeholders. Criteria may be weighted equally or assigned different weights to emphasize the criteria of one category over another.

# Moving From Prioritization to Implementation

A prioritized list of projects provides valuable guidance for County staff moving forward. The list provides direction and an implementation order based on a variety of factors including funding opportunities, local maintenance schedules, community support, and other feasibility considerations. As such, the County will consider these factors when

programming, and implementing recommended projects. This will further advance Goal 4: Implementation.

Table C-1 provides the full prioritization breakdown for pedestrian projects. Table C-2 provides the full prioritization of sidewalk gap projects. Table C-3 provides the prioritization breakdown for recommended bicycle projects.

# Community Partnerships for Active Transportation Programs

Throughout Sacramento County, there are many community-based organizations, advocacy groups, and agencies that can assist the County in supporting walking, biking, and

rolling. **Table C-4** provides information on how active transportation-related organizations may be able to partner with the County to implement the proposed programs.

Table C-4. Community Partners for Active Transportation Programs

Organization	Educational Programs	Encouragement Programs	Support Programs	Safe Routes to School Programs	Evaluation Programs	Infrastructure Programs

# Appendix D: Procedure for Incorporating Active Transportation Plan (ATP) Changes Into GIS

The following procedures identify the steps and individuals responsible for ensuring that changes to the Active Transportation Plan network are accurately captured in GIS and kept up to date. The actual changes to the GIS layer will be done by the County GIS Division through coordination with SacDOT’s Alternative Modes Coordinator.

**Recommended Active Transportation Network Changes**

Changes to the “Recommended Bicycle Network” of the ATP come from five sources.

- 1. Changes to the General Plan that are then incorporated into the ATP.
- 2. Changes to the ATP initiated by SacDOT.
- 3. Adoption of a Specific Plan.
- 4. Other parties such as Park Districts.
- 5. Results of a transportation study.

Proposed changes are to be routed to SacDOT’s Alternative Modes Section for review and comment prior to adoption. Attribute information should include status of approval (i.e. “Recommended, Not Approved” and “Approved” and date of change. Once adopted, changes are to be routed to SacDOT’s Alternative Modes Section who will coordinate with GIS Division staff.

**Existing Condition Changes**

Changes to Chapter 4, “Existing Conditions” of the ATP come from five sources.

- 1. SacDOT capital improvement projects
- 2. SacDOT maintenance division overlay projects with new bicycle striping
- 3. SacDOT Alternative Modes striping and signing projects
- 4. Other County Departments such as DWR or Regional Parks
- 5. Developer improvement projects

**Responsibility for Transmitting Changes**

PER will be responsible for transmitting General Plan changes to the Alternative Modes Section.

The SacDOT Design Section Principal Engineer will be responsible for transmitting changes (typically as-built plans) initiated by SacDOT Capital Projects to the Alternative Modes Section.

The SacDOT Maintenance Design Section Senior Engineer will be responsible for transmitting changes (typically as-built plans in AutoCAD) initiated by SacDOT Maintenance Projects to the Alternative Modes Section.

The SacDOT Transportation Planning and Development Services Principal Engineer will be responsible for transmitting changes initiated by Specific Plans and approved Development Plans to the Alternative Modes Section.

The Alternative Modes Section will be responsible for monitoring the progress of new construction of bicycle facilities.

# Executive Summary

# Goals

The 2022 Active Transportation Plan for unincorporated Sacramento County is a tool for guiding County staff, public officials, residents, and developers to build a balanced transportation system that supports and encourages active modes of travel. Active transportation includes walking, biking, and rolling (mobility devices, skateboards, scooters, etc.). The primary purpose of this Plan is to promote and encourage people to choose walking, biking, and rolling through the creation of safe, comfortable, connected, and accessible walking, rolling and biking networks, encourage alternatives to single-occupancy vehicle trips and improve access to transit. Specifically, this plan seeks to:

- Create safe and comfortable places for residents, workers, and visitors to walk, bike, and roll
- Provide active transportation access to neighborhood destinations and neighboring cities and counties

- Prioritize active transportation improvements in communities that rely on walking, biking, rolling, and public transportation
- Maintain the active transportation network in a state of good repair
- Support and expand educational programs that support walking, biking, and rolling
- Implement the recommended infrastructure projects using all available funding sources

This Plan provides a prioritization method to implement infrastructure recommendations in a phased, manageable way. This Plan will replace the Pedestrian Master Plan (2007) and the Bikeway Master Plan (2011) within the Sacramento County General Plan.

Investing in improvements to countywide walking and bicycling networks creates lasting impacts on both individuals and their communities. Developing safe, comfortable, and

accessible physical environments has been shown to:

- Increase the livability and quality of life of an area
- Increase recreational opportunities through improved access to our spaces and amenities
- Decrease the risk of pedestrian- and bicycle-involved injuries
- Provide affordable transportation options for low-income and disadvantaged residents
- Reduce visual and noise pollution from automobiles
- Support improved access to public transportation
- Improve air quality through reductions in vehicle miles traveled and reduction in single-occupancy vehicle trips

Many existing and proposed projects will continue to transform Sacramento County’s local and regional transportation environment. As both infrastructure and travel patterns shift from new developments and changing office environments, there is potential to build infrastructure more supportive of neighborhood trips. The recommendations proposed in this Plan lay the foundation for a more active, connected, accessible, and safer Sacramento County.

# Recommendations

The County developed the 2022 Active Transportation Plan through a robust community engagement process. Throughout two engagement phases, the County engaged with hundreds of residents and received thousands of online interactions from County stakeholders. The engagement process led to recommendations of 194 pedestrian improvement locations, 192 miles of sidewalk gap closures, 1,218 miles of bicycle facilities, and a collection of policy and programmatic recommendations.

The County prioritized infrastructure projects for implementation based on the following factors:

- Safety and comfort
- Connectivity and access
- Equity
- Project complexity

The ATP ranked all recommendations, then determined a priority network which includes 55 pedestrian spot improvement locations, 32 miles of

sidewalk gap closures, and 185 miles of bicycle recommendations. Priority network projects directly respond to the the safety, connectivity, comfort, and equity concerns raised through the needs analysis and community engagement process. Many prioritized projects fall on either the pedestrian- or bicycle-high injury network, directly responding to safety needs, or close a vital gap/remove a barrier to walking, biking, and rolling in unincorporated Sacramento County.

Prioritized projects are one piece of the overall active transportation network; the Plan also provides recommendations on programs in multiple categories: education, encouragement, support, safe routes to school, evaluation, and infrastructure.

These improvements across the County supporting active modes will transform the transportation environment, making it safer, more practical, and more enjoyable to walk, bike, or roll around Sacramento County.

# Chapter 1: Introduction, Vision, and Goals

# Vision

The 2022 Sacramento County Active Transportation Plan for unincorporated Sacramento County aims to improve the safety, health, and quality of life of people who live, work, and play in unincorporated Sacramento County through transportation infrastructure, programs, and policy improvements. These enhance the safety, comfort, and practicality of walking, biking, rolling for people of all ages and abilities.

# Purpose

The 2022 Plan is Sacramento County’s first active transportation plan. The Plan focuses on walking, biking, and rolling (wheeled mobility devices used by people with disabilities, strollers, scooters, skateboards, etc.). The Sacramento County Active Transportation Plan (ATP) analyzes existing conditions and provides policy, program, and infrastructure recommendations to improve active transportation within unincorporated Sacramento County. Throughout the development of the Plan, community members shared their experiences, challenges, and vision of walking, biking, and rolling across the County. The ATP will:

- Recommend infrastructure improvements for people who walk, bike, and roll
- Propose new routes for people who walk, bike, and roll
- Work towards making walking, biking, and rolling easier, safer, and more comfortable for people of all ages and abilities

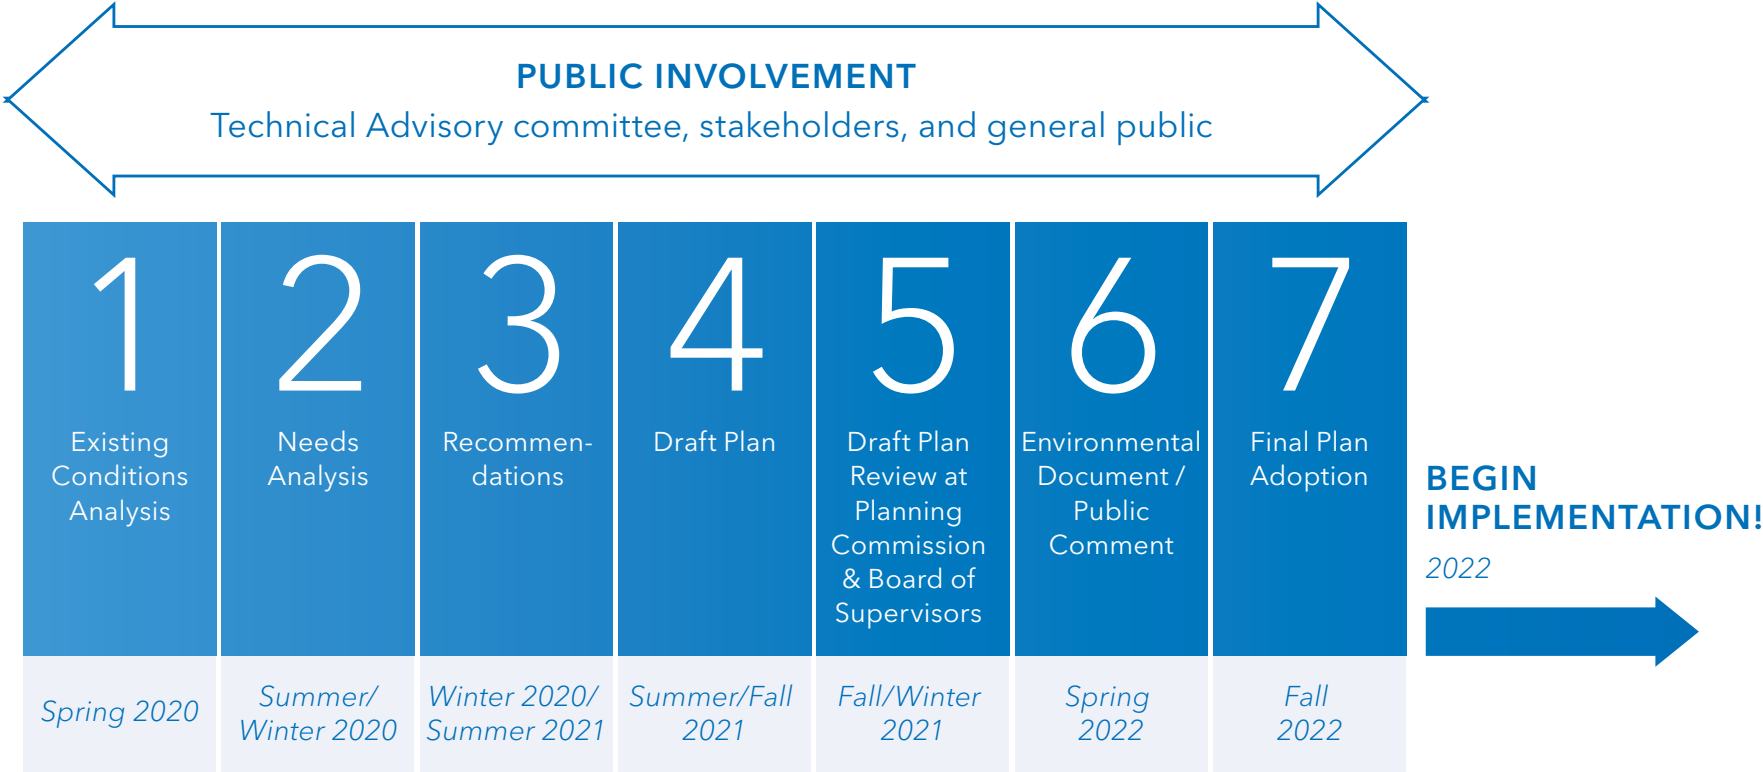

The County recognizes the importance of regional connectivity and has coordinated with neighboring jurisdictions to foster compatibility with other planning efforts and improve connectivity and access across the entire County. The Plan does not provide recommendations within the County’s seven incorporated cities: Citrus Heights, Elk Grove, Folsom, Galt, Isleton, Rancho Cordova, and Sacramento City.

# Plan Development

The County developed the ATP over five phases to gain approval and begin implementation. Each phase built upon the analysis and community feedback from the prior phases. The timeline in **Figure 01** lists each stage and when it occurred during the Plan's development.

Figure 01. Plan Development

# Climate Change

The ATP works towards many of the goals and measures of Sacramento County's Climate Action Plan (2021). Implementing infrastructure, policies, and programs from the ATP is one of the tools that Sacramento County can use to follow through on Climate Action Plan measures to reduce greenhouse gas emissions from community-wide activities and government operations by 2030. The Plan supports the following measures from the Climate Action Plan:

- Measure GHG-11: Reduce emissions from new residential and office/business professional development vehicle miles traveled (VMT). The County will achieve a 15% reduction in daily VMT compared to the regional average for all new residential and office/business professional development in the County

- Measure GHG-15: Improved pedestrian networks and facilities. The County will update the Pedestrian Master Plan to reduce barriers to walking and increase mobility for all users of the roadways
- Measure GHG-17: Improved bicycle network and facilities. The County will improve the bicycle network to provide for safe and convenient bicycle travel through implementation of the Bicycle Master Plan and the improvement of bicycle infrastructure

# Goals and Objectives

The goals and objectives of the ATP reflect the priorities expressed by the community throughout the public engagement process. Through discussions with the Sacramento County Bicycle Advisory Committee (SacBAC) and Disability Advisory Commission and listening to the community throughout the engagement process, the County established four goals based on community priorities and their vision for the future. Each goal includes a set of specific implementation measures. These goals and objectives guide infrastructure and program recommendations and the work of County staff to improve livability and active transportation safety, connectivity, comfort, and practicality across Sacramento County.

# Goal 1: Safety and Comfort

**Sacramento County will be a safe and comfortable place for all people to walk, bike, and roll.**

**Implementation Measures:**

- Increase walking and biking commute trips annually by 100% of 2010 numbers (2010 trips are about 4,000 and 4,500 trips respectively) for all trips by 2030
- Invest in new or upgraded bicycle and pedestrian facilities that increase the level of comfort and safety for people of all ages and abilities
- Increase the safety and comfort for people walking, bicycling, and rolling along high-injury corridors
- Provide safety enhancements at major intersections near important community destinations, such as schools, parks, and transit stops
- Reduce the number of severe injuries and fatalities involving people walking, bicycling, and rolling through infrastructure, education, and encouragement programs. Direct education programs at all roadway users, people walking, biking, rolling, and driving
- Reduce bicycle- and pedestrian-involved collisions and injuries by 50% of 2010 levels (2010: 208 collisions) by 2030
- Increase tree canopy coverage (percent of land covered) over pedestrian and bicycle facilities across unincorporated communities.
- Improve lighting in neighborhoods and along designated walking and biking routes
- Create a comfortable and aesthetically interesting street environment for people walking, biking, and rolling
- Strive to adopt innovations in design and engineering and participate in new best practices from federal, state, regional and local leaders in active transportation
- Monitor bicycle and pedestrian collision data to identify trends and specific problem areas
- Provide walking, bicycling, and rolling amenities (e.g., water fountains, shade trees, benches, lighting, parking) at key destinations such as job centers, transit stops, and parks

## Goal 2: Connectivity and Access

**Sacramento County residents will have access to neighborhood destinations by walking, bicycling, and rolling and can seamlessly connect to networks in incorporated cities; Sacramento County residents will travel more by active transportation modes.**

### Implementation Measures:

- Ensure walking, bicycling, and rolling routes connect to both neighborhood-serving destinations—such as schools, libraries, parks, and transit stations—and regional destinations such as job centers and major commercial areas
- Make bicycling more attractive than driving for short trips of five miles or less by developing and maintaining a bikeway system that provides direct, safe, and convenient travel by active transportation throughout neighborhoods in Sacramento County with connections to adjacent municipalities
- Eliminate gaps in the bicycle and pedestrian networks to improve connectivity and physical access between neighborhoods and destinations
- Implement the Sacramento County ADA Transition Plan (2020). Refer to the ADA transition Plan available on the County's website for more details
- Use Universal Design Principles when designing separated and/or protected bikeways to ensure curb accessibility for people taking transit or paratransit and for people of all abilities who need direct curb access. Design Principles may include providing transit boarding islands, designing buffer areas that are wide enough to allow loading and unloading from vehicles (including transit and paratransit vehicles), and providing connections to safe crossing points that provide sidewalk access
- Integrate land use and transportation planning to provide for more, safer, and accessible walking and bicycling trips
- Provide connections across creeks, railroad crossings and rivers, freeways, and high-speed/high volume arterials and through existing gated communities, walls, and cul-de-sacs to access schools, activity centers, and transit stops
- Provide safe and secure bike parking and other end-of-trip facilities at key destinations such as job centers, transit stops, and parks
- Collaborate with local jurisdictions within the County as well as adjacent counties and SACOG to integrate existing active transportation facilities and cooperate in developing new facilities to create a uniform, physically accessible and connected active transportation network
- Develop a regional active transportation wayfinding system that allows all people, regardless of ability, to easily navigate major destinations and trail systems

# Goal 3: Equity

- Through partnerships with community groups and coordination with local and regional agencies, develop programs, including Safe Routes to School, that promote and encourage active transportation as a viable means of travel throughout the County
- Promote Sacramento County’s 311 system for the public to suggest locations for new bikeways and walkways on an on-going basis
- Consider implementing a shared micromobility program to increase low-cost and environmentally-friendly transportation options within the County. This program should be implemented equitably across EJ areas and other locations with high concentrations of people walking and bicycling
- Study developing mobility hubs near SacRT light rail stations, high-ridership bus stops, and other high-demand walking, bicycling, and rolling areas

Active transportation improvements will prioritize the needs of communities in Sacramento County that rely on walking, biking, rolling, and transit.

## Implementation Measures:

- Improve the safety and security of people walking, bicycling, and rolling in rural parts of the County, historically disadvantaged communities, and areas of concern for people with disabilities
- Focus on improving active transportation connections to transit stops and community destinations, giving priority to connections in disadvantaged communities
- Partner with community and advocacy groups to provide educational resources (for all road users) and walking and biking accessories (lights, helmets, etc.) to disadvantaged communities

- Create accessible and culturally appropriate opportunities for all people regardless of race, color, national origin, disability, age, sexual orientation, or income to engage in the decision-making process
- Coordinate with the ADA Transition Plan (2020) to maximize opportunities to create universally accessible sidewalks, intersections, and transit stops

# Goal 4: Maintenance

**Keep the active transportation network in a state of good repair and high usability.**

## Implementation Measures:

- Develop a multi-year maintenance and rehabilitation program that identifies cost-effective enhancements to existing or missing pedestrian and bicycle facilities
- Coordinate with maintenance stakeholders across departments and jurisdictions to share resources and establish facility inspection schedules
- Maintain (including street sweeping) designated facilities to be comfortable and free of hazards to people walking, bicycling, and rolling.
- Prioritize clean-up responses to hazards on commute corridors
- Ensure that the repair and construction of transportation facilities minimize disruption to the bicycling and walking environment. Walking and bicycling facilities will be reconstructed in the same or better condition than prior to construction or repairs. When closures or detours are necessary, provide or clearly indicate where accessible alternatives are
- Monitor and maintain bicycle parking and other support facilities
- Promote Sacramento County's 311 system for the public to report hazard and maintenance issues throughout the County
- Develop a communication protocol for facility closures/detours and network updates
- Develop and enforce a sidewalk maintenance program to ensure that adjacent property owners properly maintain the sidewalks (consistent with the County's Curb, Gutter, and Sidewalk Repair and Replacement Policy, 1992)

# Goal 5: Educate and Encourage

Expand established education and encouragement programs, and develop new education programs to encourage and support walking and bicycling.

Implementation Measures:

- Expand established outreach programs by securing ongoing funding, and expand and develop new education programs (for people walking, biking, rolling, and driving)
- Expand and support education programs targeted at people driving, including commercial drivers
- Promote educational and encouragement programs using community-specific messaging using all relevant communication mediums including local media, social media, print collateral, email lists, and partnerships with community-based groups
- Work with the County’s Department of Health Services on increasing physical fitness and working towards other public health objectives
- Work with Sacramento County schools and school districts to expand the Safe Routes to School Program. Encourage bicycle and walking education classes for students and their families
- Promote active transportation-related events and new facilities through local new media, and other relevant stakeholder groups
- Apply for recognition as Bicycle Friendly Community as determined by the League of American Bicyclists
- Support programs that help low-income residents own and operate a road-ready bicycle
- Support bicycle parking (bike valet) at major events and event centers
- Provide encouragement programs by seeking grant funding and other funding sources
- Support and expand programs that promote shared micromobility programs and help residents access, afford, and learn how to use the program(s)

# Goal 6: Implementation

Active transportation projects will be implemented across Sacramento County through street maintenance and improvements, private development, and external grant funded projects.

## Implementation Measures:

- Continue to allocate Capital Improvement Plan funding and other County resources to implementing bicycle and pedestrian facilities
- Actively seek new grant funding for bicycle and pedestrian facility planning, design, and implementation
- Assess the use of developer fees and/or improvement districts, and enforce fee submittal and compliance to contribute to improved active transportation facilities
- Require land development projects to finance and install bicycle and pedestrian facilities within the development as appropriate and where recommended in the Active Transportation Plan. These practices will ensure connectivity within the development and to existing or planned facilities that connect to the development
- Encourage bicycle parking, showers, changing facilities, and lockers at public and private buildings
- Prioritize pedestrian amenities at areas near transit stops and key community destinations (schools, parks, libraries, etc.)
- Conduct bicycle and pedestrian counts at selected locations annually (during the same days and times) to monitor changes in bicycle and pedestrian trips
- Measure the success of the Active Transportation Plan through user satisfaction surveys
- Track and report annually to SacBAC the success of the Active Transportation Plan based on bicycle lane miles and pedestrian projects

# Chapter 2: Existing Conditions

"The Active Transportation Plan would benefit my family and I by getting our streets safe enough to walk and feel secure in choosing to walk over driving. Also, exciting places to walk to would help encourage and uplift our community [to be] less reliant on fossil fuels to enjoy everyday life."

Anna Fairehrenreich

Stay-at-home mom, age 34  
South Sacramento County resident for 6 years

Walking and biking are closely linked to health and economic benefits<sup>1</sup>

Increased physical fitness and health

Low-or no-cost transportation options

Access to community assets and destinations  
*parks, schools, health care, shopping*

Reduced congestion and parking costs

Increased individual mobility

Connectivity and visibility of local businesses

Vibrant and welcoming streetscapes

<sup>1</sup>Cullen McCormick, "York Blvd: The Economics of a Road Diet," (2012)

*Green infrastructure, sidewalks, and speed feedback sign on Florin Road near Kanelos Lane.*

# Plan and Policy Review

Current active transportation documentation, plans, and policies that the future Sacramento County Active Transportation Plan will influence and be influenced by have been reviewed. Each document differs in overarching focus and approach related to the most relevant active transportation needs in the area, however general commonalities are present.

## Goals and Performance Measures

The following goals are consistent between many long-range planning and bicycle and pedestrian planning documents throughout the region with access, mobility, connectivity, safety, education, encouragement, and awareness being the most common goals.

- Provide a connected pedestrian and bicycle network throughout the jurisdiction
- Improve and/or enhance safety of people walking and bicycling

- Reduce emissions caused by vehicle travel
- Provide education to all residents, including people driving, walking and bicycling
- Support the enforcement of safety for all roadway users, including people walking and bicycling
- Acquire sufficient funding by identifying federal, state and local sources

A summary of Focus and Goal Categories found across regional and local plans is shown in **Table 01**.

The various plans were relatively inconsistent in their identification of goals, focus areas, objectives, strategies, policies, and implementation actions, however there were often common topics that were repeated across many of the plans. A full matrix of policies and actions found across the regional and local plans is included

*A person biking along the Florin Creek Trail.*

as an appendix to this document. The common topics generally relate back to the following:

- Invest in bicycle and pedestrian infrastructure as healthy transportation options
- Improve safety for people walking and bicycling
- Increase and improve access to employment, economic centers, and environmental justice communities
- Establish and expand on education, encouragement, enforcement, and evaluation programs
- Improve access to transit
- Collaborate with nearby jurisdictions to support a regional bicycle network
- Prioritize projects that improve access to environmental justice communities, improve safety, close gaps in the network, and low cost or privately funded improvements

Several active transportation documents adopted in the region have policies, goals or actions to implement active transportation related programs. These programs may include education, encouragement, enforcement, and/or evaluation. However, the actual implementation or expansion of these programs is difficult to determine, or not documented.

Active transportation in a rural setting is also an area of weakness in active transportation plans in the region. Very low density creates a network void of connected facilities and requires long distances to travel to reach destinations. As a result, the pedestrian mode share is far lower than suburban areas. The bicycle mode share suffers as well as most facilities that do exist are located on high speed, narrow roadways.

There are ample opportunities in suburban areas of the County to improve connectivity. Both pedestrian and bicycle networks can be expanded to ensure gapless connections to transit routes and create desirable routes to destinations within walking distances of various destinations. Active transportation in the County would be made further desirable by offering support facilities such as water fountains for people walking and dedicated bicycle parking facilities for people bicycling at key destinations.

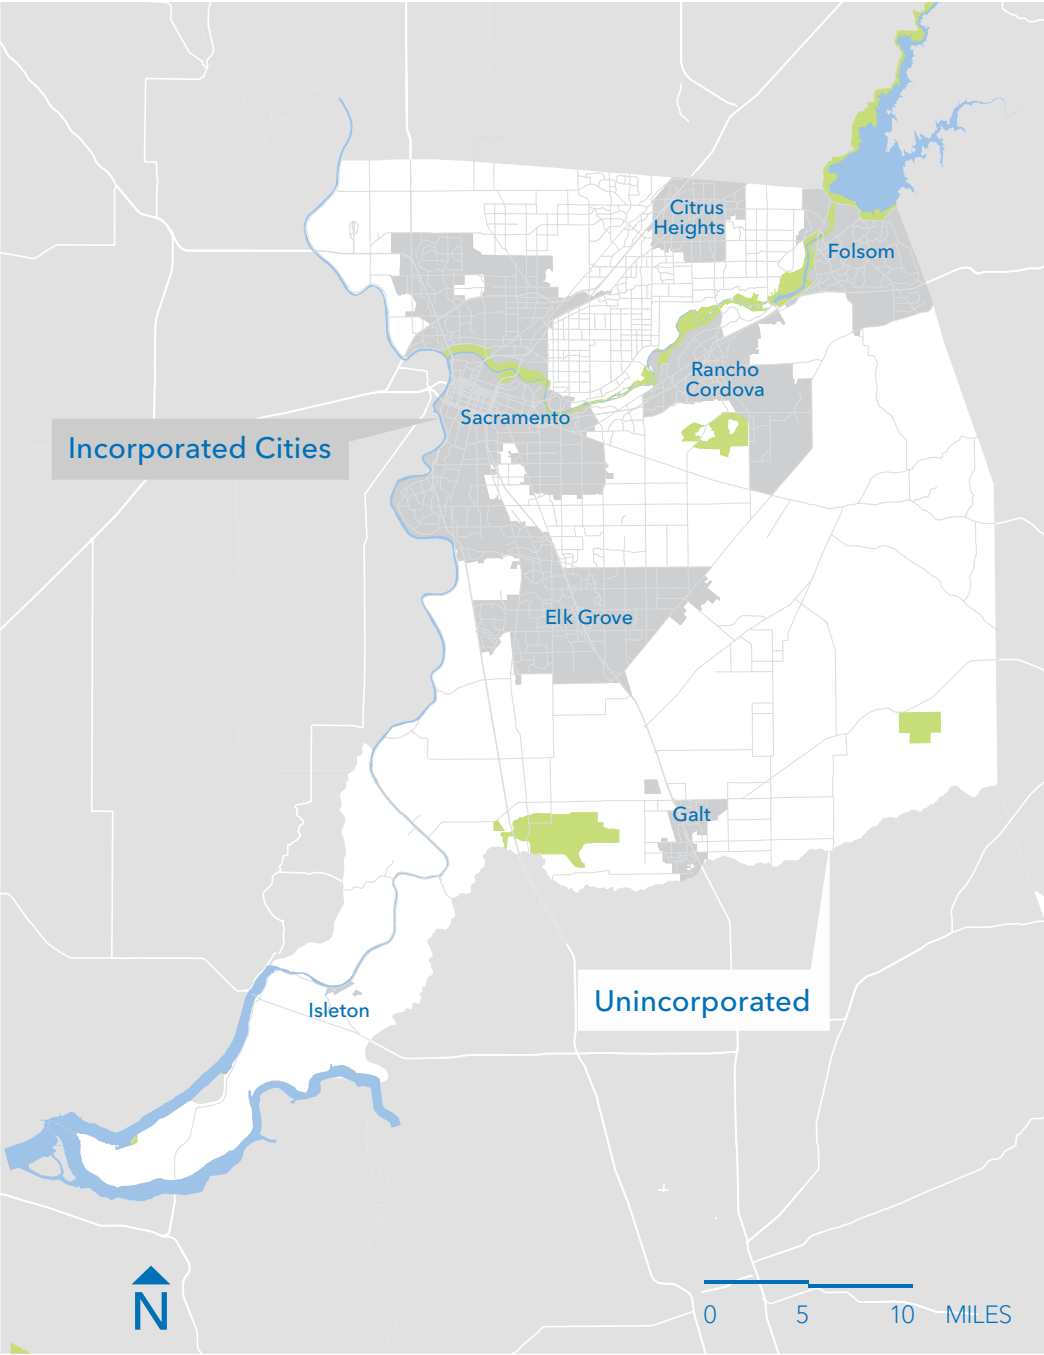

This extensive review of active transportation documents is considered a baseline understanding for the goals and objectives that the Sacramento County Active Transportation Plan will need to address. Also, pointing out the differences and shortcomings between plans in the region will support the success of this plan.

Figure 02. Unincorporated Sacramento County

# Unincorporated Sacramento County Overview

## PLAN AREA OVERVIEW

This Active Transportation Plan covers the unincorporated areas of Sacramento County (**Figure 02**). Sacramento County is located in the middle of the 400-mile long Central Valley, 87 miles east of San Francisco, and 100 miles west of Lake Tahoe. Sacramento County has seven incorporated cities: Sacramento, Elk Grove, Citrus Heights, Folsom, Galt, Isleton, and Rancho Cordova. The County also contains a number of mature and new communities in the unincorporated area. Encompassing a total of 994 square miles, the County surrounds Interstate 80 (I-80) and US Route 50 (US 50) east of Yolo County and Interstate 5 (I-5) and State Route 99 (SR 99) north of San Joaquin County and east of Solano County. The County's unincorporated area is 764 square miles or about 80% of the total area.

The unincorporated County is mostly-developed and densely populated along the I-80 and US 50 corridors and along parts of the SR 99 corridor. The remainder of the unincorporated County is more sparsely populated with agricultural uses or undeveloped land.

The unincorporated areas of Sacramento County have a population of 592,911 (2019), which is approximately 40% of the total population of the County.<sup>2</sup> The unincorporated population has grown 5.3% since the 2010 Census, and the median age for the entire county has increased from 34.8 to 36.6 over the last ten years.

<sup>2</sup>United States Census American Community Survey (ACS), 2018

*River Road and the Sacramento River.*

**ENVIRONMENTAL JUSTICE COMMUNITIES**

The Sacramento County General Plan Environmental Justice (EJ) Element (2019) identified EJ Communities that are considered disadvantaged compared to other parts of the unincorporated County. Focusing on EJ Communities allows the County to identify increased health risks and other environmental justice issues, including transportation, these residents experience. The EJ Element used the California Communities Environmental Health Screening Tool (CalEnviroScreen 3.0) and the Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) to identify disadvantaged communities based on socioeconomic and environmental characteristics.

*Man waits to cross street on Watt Avenue*

The four designated EJ Communities are North Highlands, West Arden-Arcade, South Sacramento, and North Vineyard. These communities are shown in **Figure 03**.

*A placemaking entry sign in Arden-Arcade.*

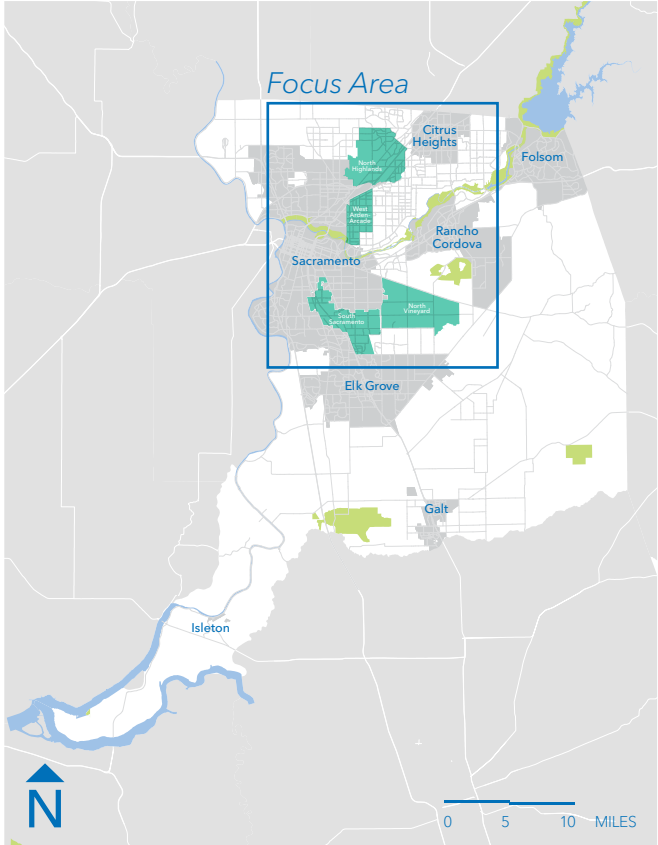

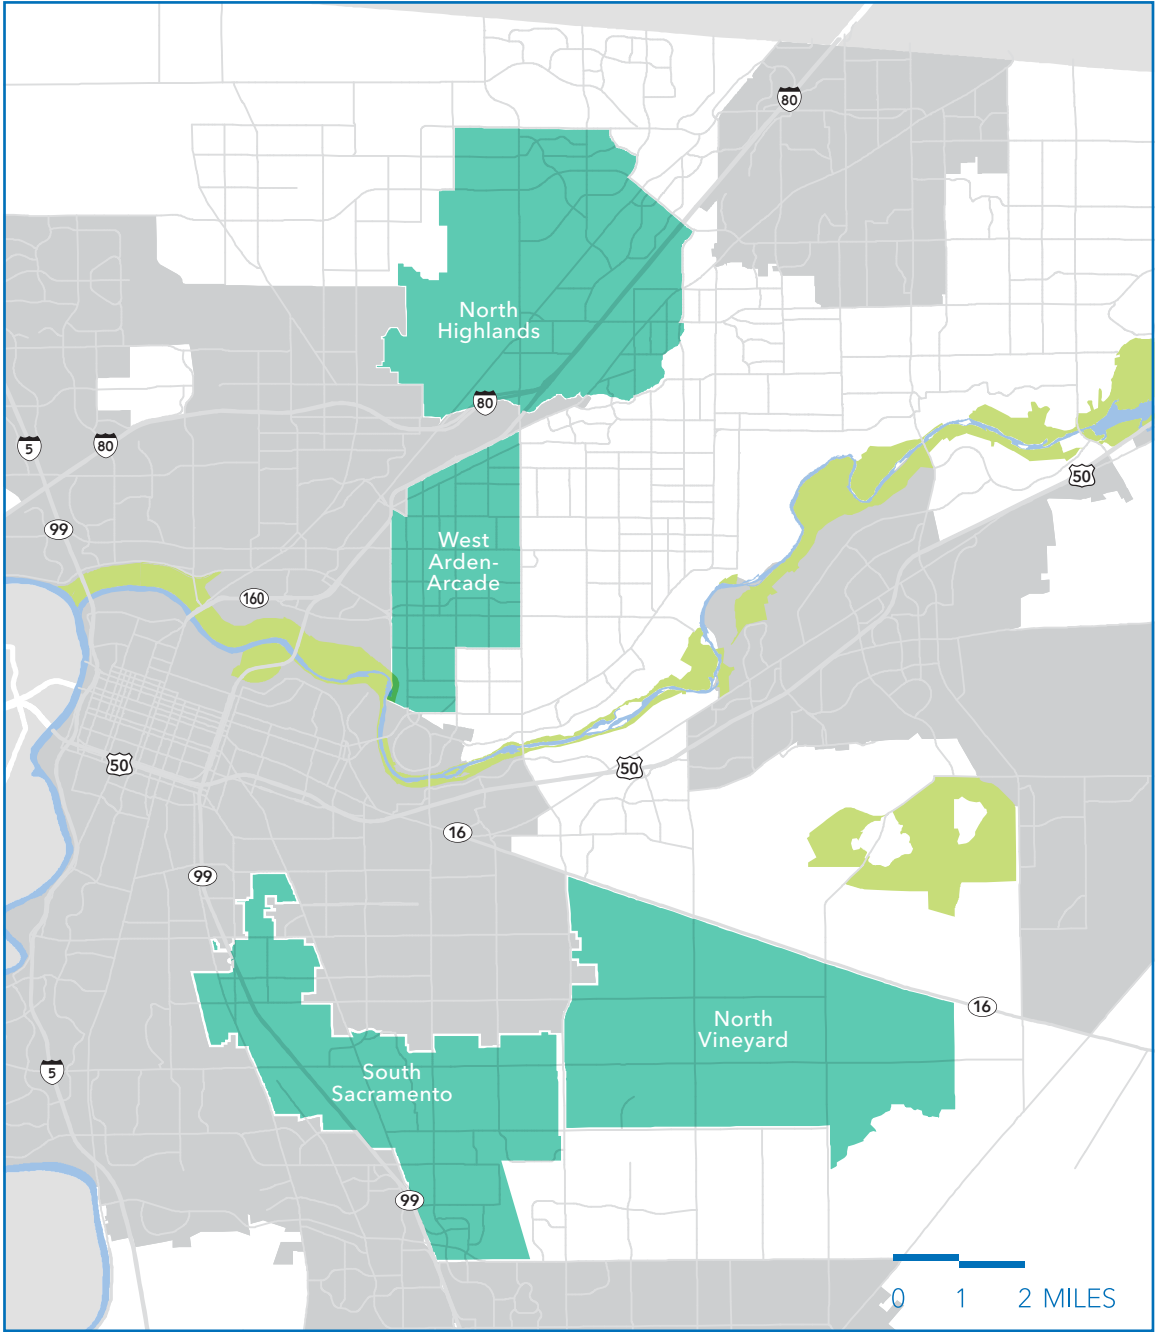

Figure 03. Environmental Justice Areas

Focus Map

Key Map

Legend

- Environmental Justice Community
- Unincorporated
- Incorporated Cities

Median household income is much lower in the EJ Communities than in other unincorporated communities in Sacramento County. While all four County EJ Communities have relatively similar land areas, South Sacramento is the densest community with 67,362 residents. North Vineyards is the least dense, with only 1,733 residents and primarily rural agricultural land uses. Across the entire County, the areas with the highest population density are within unincorporated areas. Multiple neighborhoods within the South Sacramento area and communities within and around North Highlands are denser than any of the incorporated cities. The Arden-Arcade area is also one of the ten most dense areas of the County. Looking only at unincorporated areas, EJ Communities tend to have higher population densities than non-EJ Communities.

Sacramento County’s EJ Communities are a focus throughout this Active Transportation Plan. Transportation issues are intertwined with many of the concerns of EJ Community residents:

- Lack of connected, comfortable, and low-stress walking and bicycling infrastructure
- Poor access to healthy food
- Minimal physical activity
- Poor access to public facilities like parks, libraries, services, medical offices, and schools
- Exposure to air pollution
- Lack of tree canopy

**FUTURE POPULATION AND JOB GROWTH**

Many parts of unincorporated Sacramento County are experiencing growth, responding to high demand for additional housing and jobs. The County expects most future growth to occur in master planned communities (in various planning and development phases).<sup>3</sup> New developments will result in the potential for increased vehicle trips to and from these areas, and connecting these areas to the larger walking and bicycle networks (as well as transit) can facilitate walking, biking, and rolling trips and reduce automobile dependence for workers and residents of these areas. Sacramento County has approved eight Master Plan/ Specific Plan areas (**Figure 04**) for future residential and commercial development which include Florin Vineyard, Vineyard Station, Vineyard Springs, Cordova Hills, Glenborough, Easton, Mather South, and New Bridge.

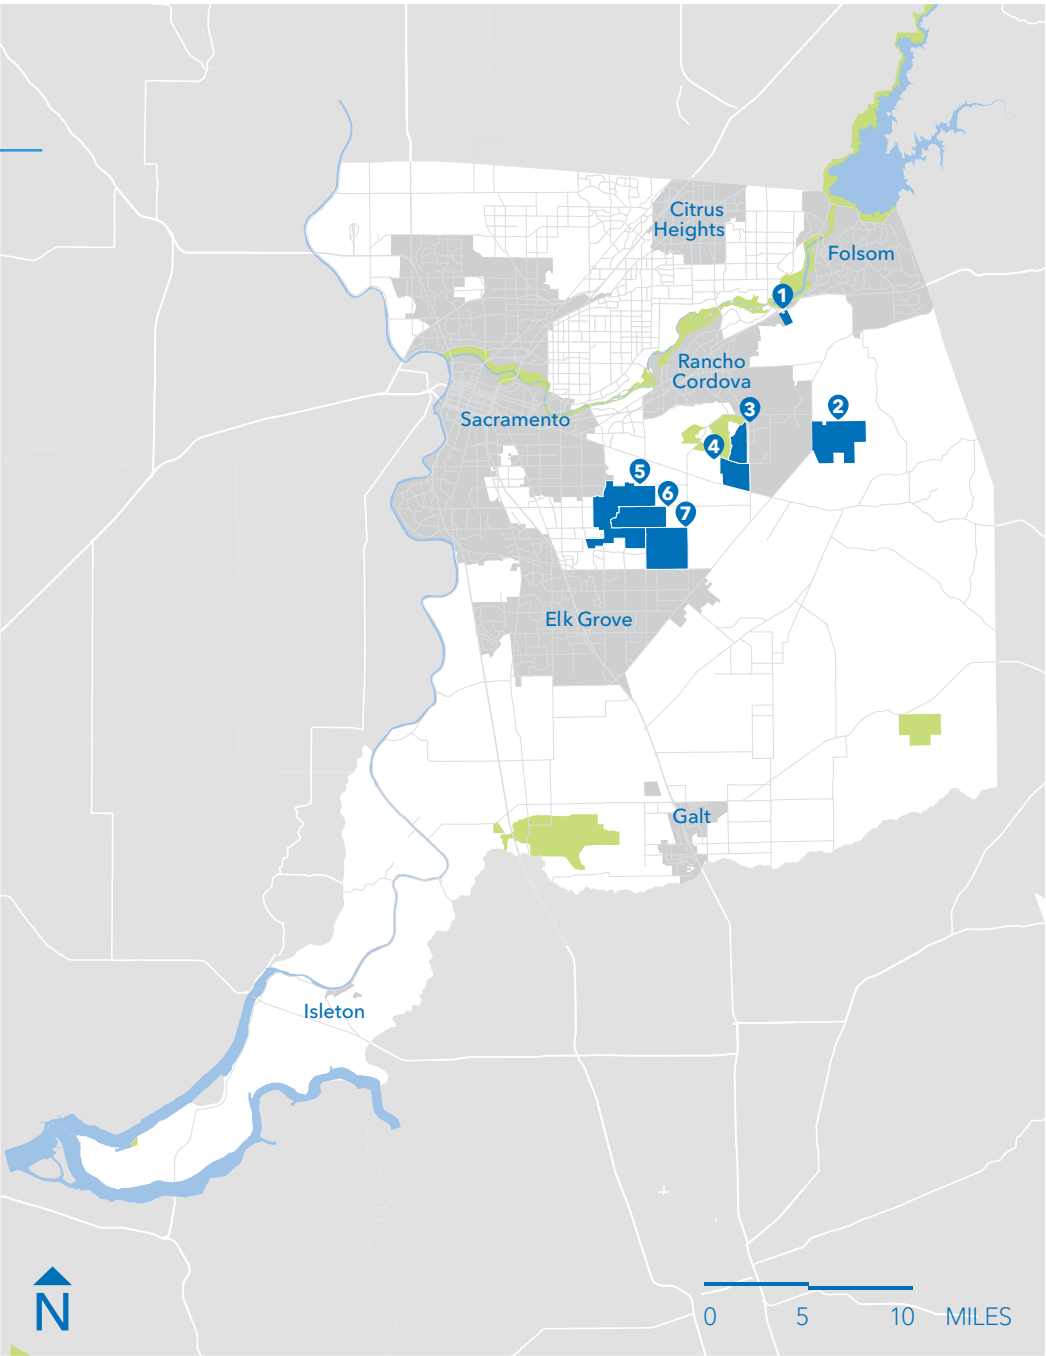

<sup>3</sup>Sacramento County expects most growth to happen within Master Plan development areas. However, data from SACOG suggests that there may also be additional infill growth in other areas of the County. Analysis of future growth for this plan relies on County data showing the majority of growth in the Master Plan areas.

Legend

- 1 Easton Place
- 2 Cordova Hills
- 3 Mather South
- 4 NewBridge
- 5 Florin Vineyard
- 6 North Vineyard Station
- 7 Vineyard Springs

- Unincorporated
- Incorporated Cities

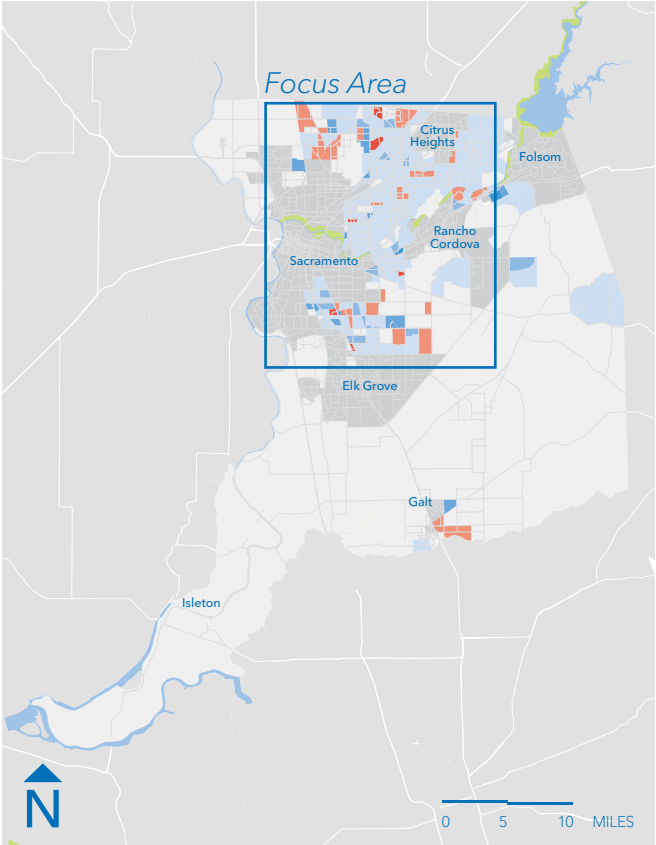

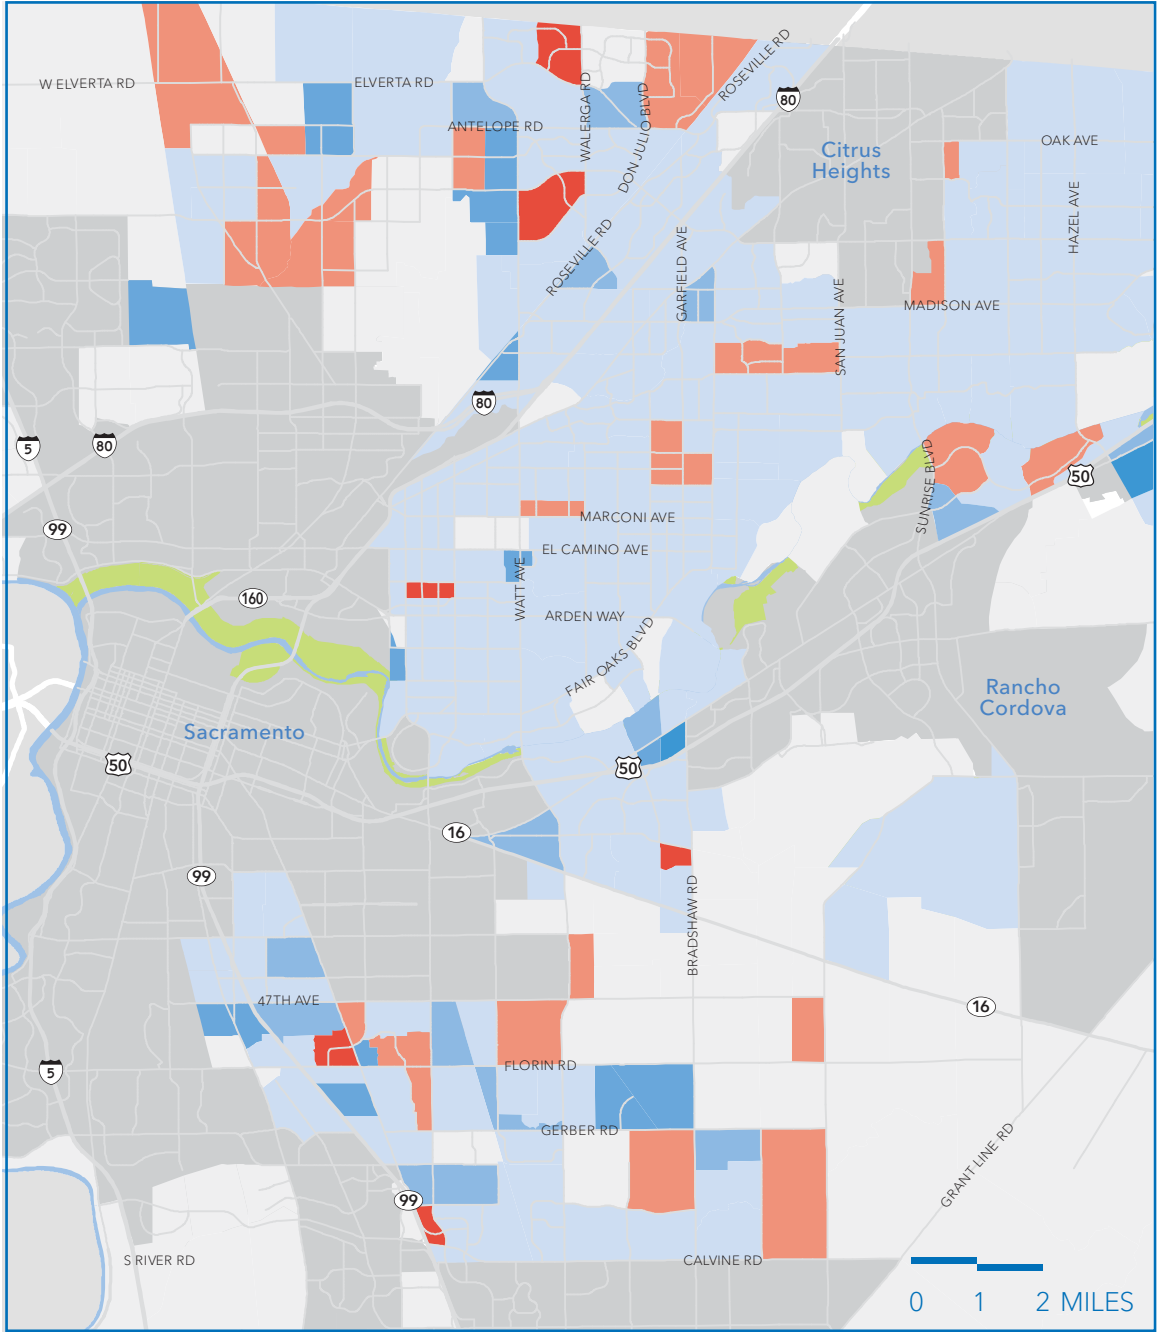

Many of the master plan areas are within the North Vineyard EJ Community. Other master plan developments are in more eastern parts of the County, east of Rancho Cordova.

Population and job growth will not be limited to those master plan areas. Population and job growth models from the Sacramento Area Council of Governments (SACOG) predict population and job growth throughout the unincorporated County (**Figure 05** and **Figure 06**), especially in the South Sacramento and north-central parts of the County (the area between the City of Sacramento and Folsom). There are also multiple pockets of projected dense job growth along the Sacramento Regional Transit light rail corridors.

TRAVEL PATTERNS

Based on the 2019 ACS<sup>4</sup>, there are approximately 270,600 workers 16 years or older in unincorporated Sacramento County. The majority of workers commute by car, either alone (77.2%) or carpooling (10.2%), while 1% walk to work and fewer than 0.5% commute by bicycling. People taking transit represents 2.5% of workforce and over 8% work from home. The average commute time for all workers is 28 minutes (**Figure 07**).

While most unincorporated residents use cars to get to work, walking and biking have a more prominent role for neighborhood-focused trips. SACOG regional data indicates that about 9% of all-purpose trips are completed by walking and biking, which has increased from 7% in 2000. These local trips include people walking and biking to schools, parks, libraries, stores, community centers, and other essential services and neighborhood destinations.

<sup>4</sup>Based on the total workers in Sacramento County minus the workers in each incorporated City.

**28**

MINUTES 2019 ACS

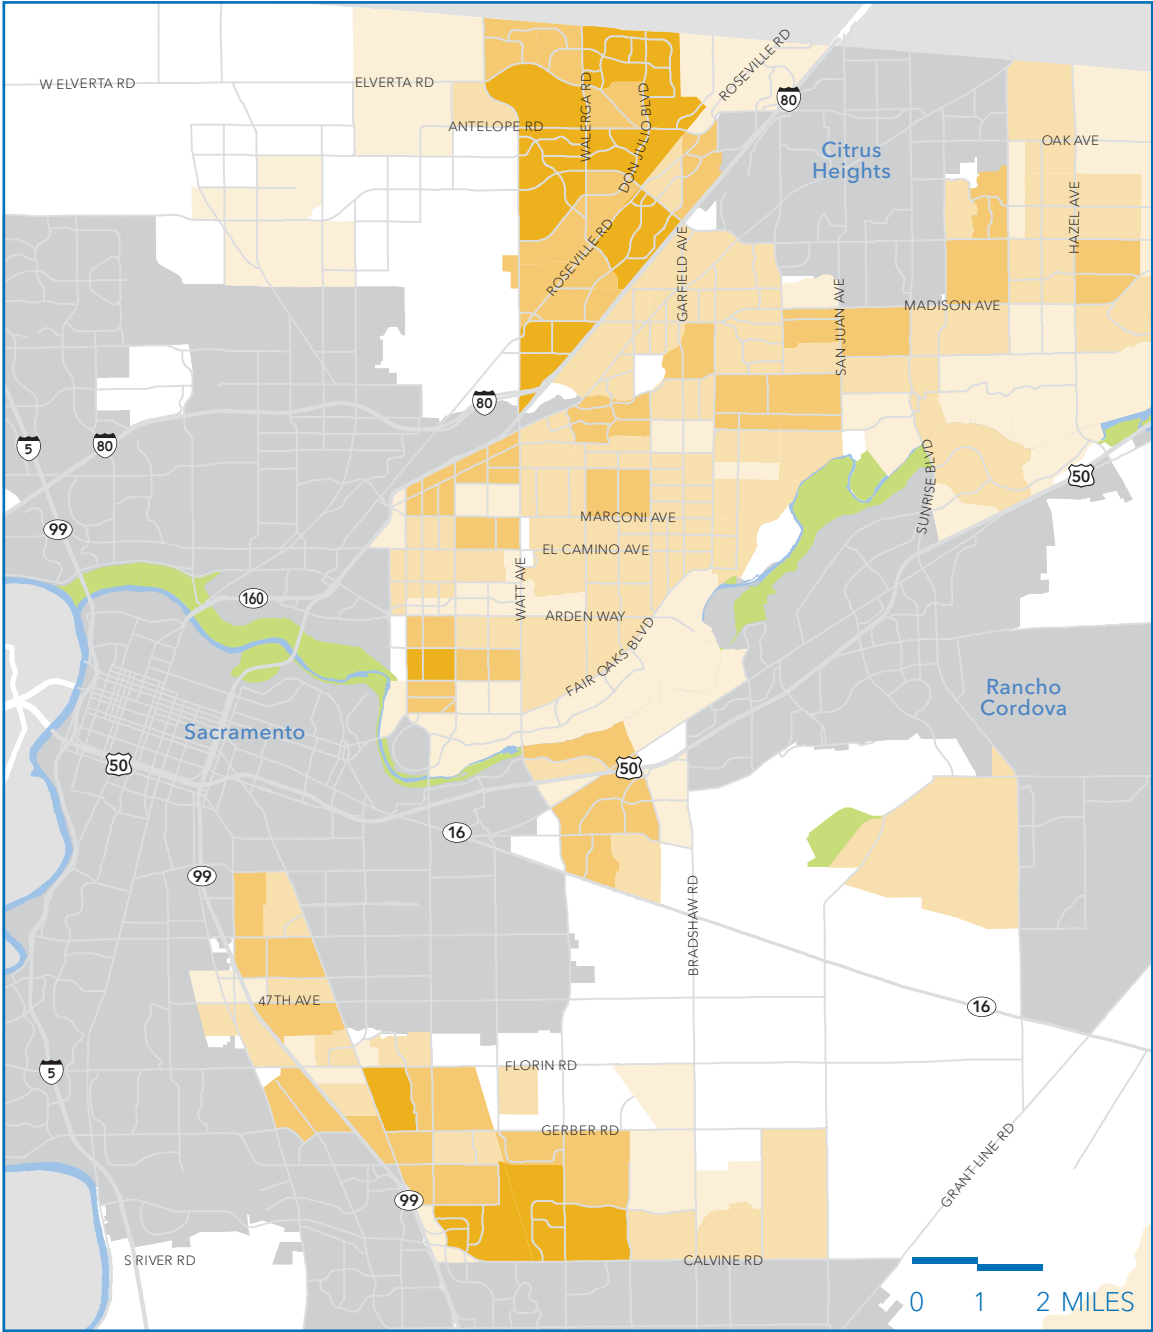

Based on the SACOG Travel Demand Model, South Sacramento, West Arden-Arcade, and North Highlands have the highest current densities of trips under five miles in length in the unincorporated County. These relatively short trips are key opportunities to convert car trips to walking or biking trips with a safe and comfortable active transportation network. This is shown in **Figure 08**.

*A bike lane on Power Inn Road, entering the Florin Neighborhood, north of Geneva Pointe Drive.*

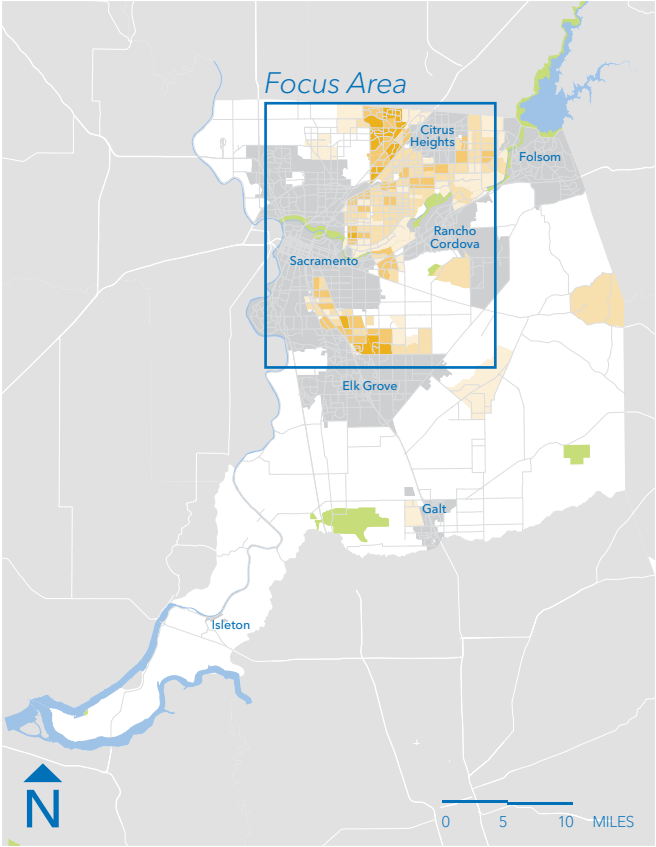

Figure 08. Concentration of Trips Less Than Five Miles

Focus Map

Key Map

Legend

TRIPS LESS THAN FIVE MILES

## PUBLIC TRANSPORTATION

Sacramento Regional Transit (SacRT) buses and light rail run throughout the County, with a total annual ridership of about 21 million passengers in 2019. Across the County, SacRT has over 5,000 bus stops; about 1,050 bus stops (21%) are within unincorporated Sacramento County. The light rail carries an average of 40,000 trips per day, SacRT buses carry 37,000 passengers per day (weekday average). Most light rail routes run within the City of Sacramento; however, the Gold Line runs along Folsom Boulevard between Sacramento and Folsom, with five stops in unincorporated areas. Those stations are Watt/Manlove, Starfire, Tiber, Butterfield, and Hazel. In addition to those Gold Line stations, residents near South Sacramento may also use the Blue Line that, in this segment, generally runs north-south.

*A SacRT bus stopped on Morse Avenue.  
The bus stop includes a shelter.*

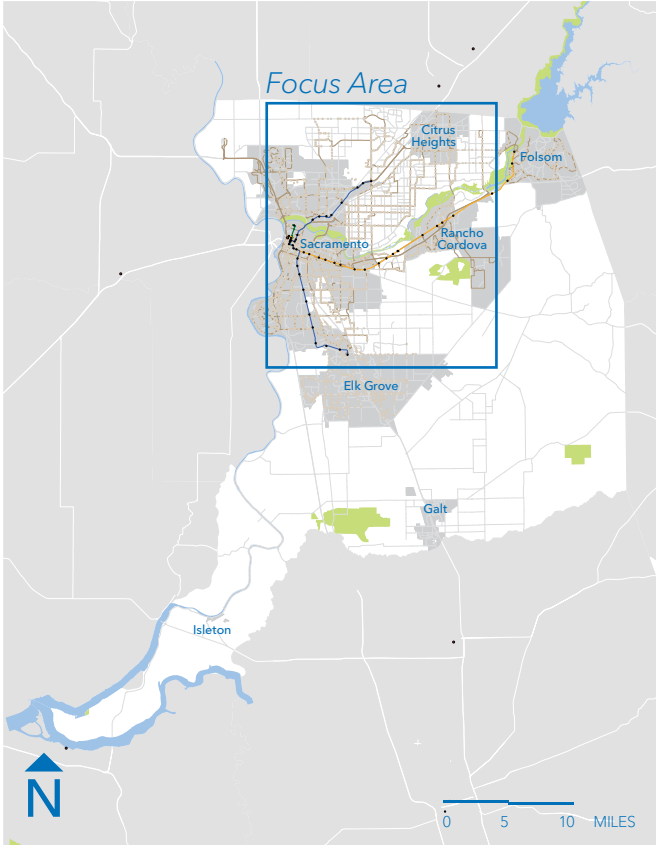

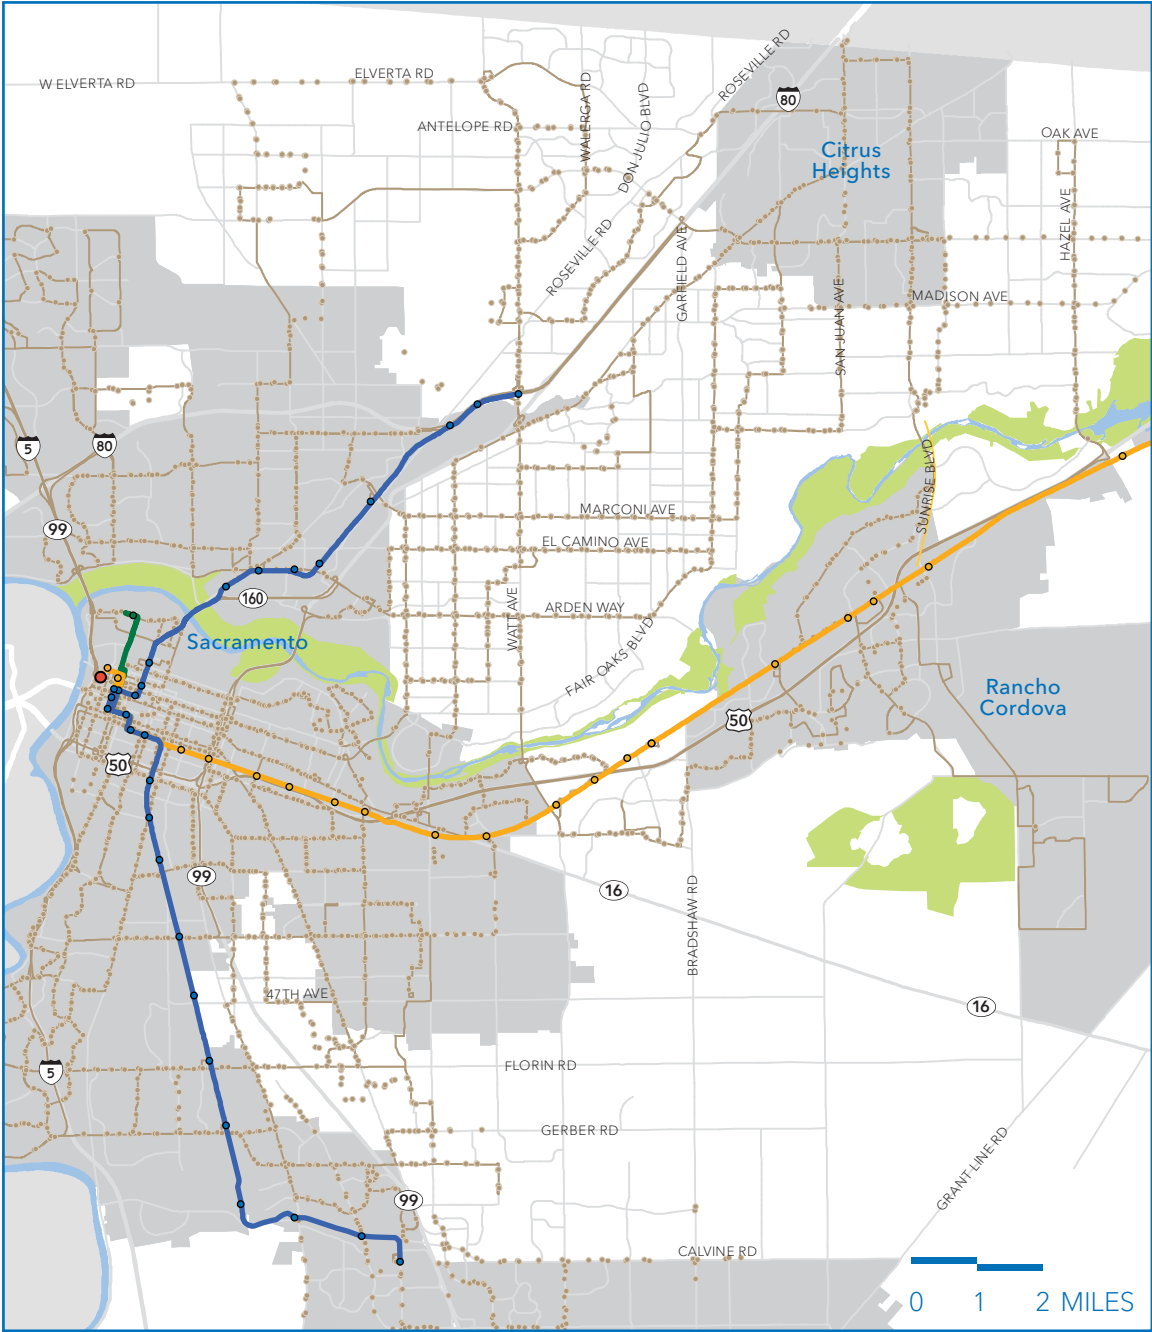

Improving walking, biking, and rolling access to bus and light rail stations will make it easier and more comfortable for transit riders to reach stops. The improvements, combined with projects previously identified by the ADA Transition Plan, can also potentially generate additional riders by providing practical options to walk, bike, or roll to and from the transit stop. In addition to sidewalks, trails, and bicycle facility improvements, stop amenities (benches, trash cans, shelters, etc.) can enhance the streetscape and create a more pleasant place for transit riders to wait for their vehicle away from elements. SacRT's system map can be seen in **Figure 09**.

# Active Transportation Network

The active transportation network in Sacramento County consists of sidewalks, bikeways, and shared use paths (trails), along with amenities that improve safety, comfort, and convenience for people biking or walking.

*Sidewalk with a rolled curb along Marconi Avenue.*

EXISTING SIDEWALK TYPES

Figure 10. Sidewalk and Curb Types

SIDEWALKS

Sidewalks provide dedicated space for people walking and using mobility devices to travel (Figure 10). Sidewalks are raised from the roadway and sometimes have a planting strip to increase separation from the car and provide greenery and potentially shade trees. Sidewalks are separated from the roadway by a curb. There are two types of curbs, rolled and vertical. Rolled curbs are sloped and can allow vehicles to park partially on the sidewalk, typically accommodating vehicle parking on narrow roads. This behavior can obstruct the travel path for people walking or rolling. Vertical curbs rise straight up to the sidewalk level and do not facilitate sidewalk mounting. Vertical curbs are the current standard within Sacramento County.

Vertical Curbs

Curbs rise straight up to the sidewalk level and are the current standard within Sacramento County.

Rolled Curbs

Curbs are sloped and can allow vehicles to encroach onto the sidewalk, providing more roadway width at the expense of pedestrian pathway conflicts.

Attached Sidewalks

Connect directly to the curb and provide minimal lateral separation from the roadway.

Detached Sidewalks

Separated from the curb with a buffer area, typically a planting strip or special paving material to provide greater separation from the roadway.

There are roughly 1,100 miles of roads throughout unincorporated Sacramento County. Only 13% of those roads have sidewalks on both sides of the street (**Figure 11**). Twenty-one percent of streets have sidewalks on one side of the street, while 66% of streets have no sidewalks. Combined, 87% of roads either have no sidewalks or sidewalks only on one side of the street. The concentration of sidewalks varies by community across the County. Sidewalks are generally complete on both sides of the road in the northern and central parts of unincorporated County which are more urbanized. Sidewalks are inconsistent and missing more frequently in unincorporated areas south of the City of Elk Grove, due to the rural nature of the southeast area of the County. Most roads in the North Highlands and South Sacramento communities have connected sidewalks. However, significant sidewalks gaps are present in the West Arden-Arcade and North Vineyard EJ Communities. Walking along streets without sidewalks or needing to access destinations

*A person walking on a sidewalk with a vertical curb on Florin Road near SR-99.*

on the side of the street without them places people walking closer to moving vehicles with no barrier or grade separation. These are stressful experiences for people walking and are not conducive to making walking a comfortable, practical option for most residents.

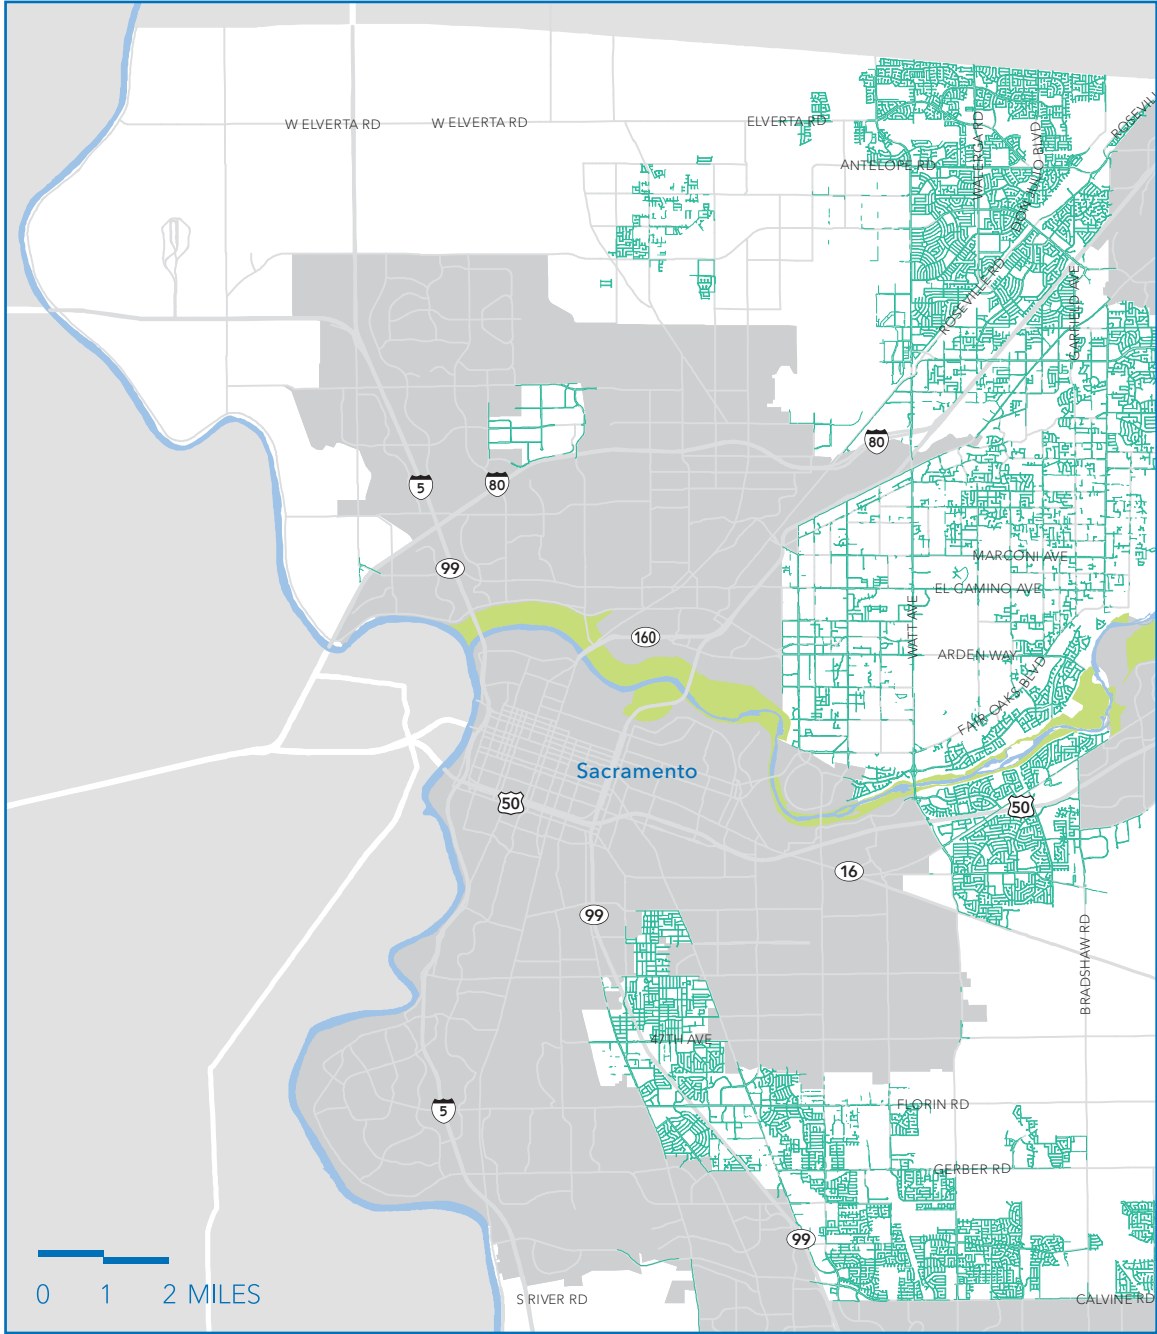

In addition to sidewalks, many other infrastructure components contribute to the pedestrian environment. Crosswalks, curb ramps, trails, crossing enhancements, lighting, tree canopy, street furniture, bus shelters, and other streetscape items can affect the safety, comfort, and routing decisions of people walking (and taking transit). Many of these items contribute to people’s perceived safety and actual safety, both in terms of traffic safety and personal safety. Items like street furniture (benches, trash cans, etc.) and bus shelters make streets more comfortable, practical places to be. The placement of street furniture and utilities needs to ensure sufficient clear space to maintain accessibility. Most people perceive an attractive walking environment as both safe and comfortable.

## Pedestrian Experience

Crossing the street, especially large-multilane streets, at mid-block locations or across slip lanes (free right turn lanes) can be uncomfortable. In many cases, aggressive driving and inadequate pedestrian crossing facilities create conditions that frequently lead to drivers failing to yield, improper stopping (stopping too close to the crosswalk), parking too close to intersections (limiting driver visibility of people walking), and other issues. Even on residential streets with less traffic, fast and aggressive driving can discourage walking trips. These concerns are heightened for the seniors and children, some of the most vulnerable roadway users, and most likely to access more neighborhood-focused destinations.

*A signalized school crossing of Calvine Road at Cliffcrest Drive.*

*A slip lane at the intersection of Madison Avenue/Garfield Avenue.  
Source: GoogleMaps*

*A detached sidewalk with landscaping on Marconi Avenue*

*Sidewalk approaching an I-80 interchange in North Highlands*

Throughout unincorporated Sacramento County, few residents can walk to a grocery store or their local school. There are large areas of unincorporated County without a large grocery store. Most unincorporated County residents cannot walk to a grocery within ten minutes; 20% of unincorporated residents and only 10% of EJ Community residents can complete this walk using low-stress roads. Improving connections to grocery stores within EJ Communities is consistent from EJ Element Policy EJ-13, providing safe, convenient opportunities to access healthy foods within these neighborhoods.

Fewer than half of unincorporated residents (40%) can access their closest school within a ten-minute, low-stress walk. Only 17% of EJ Community residents can access their local school within a ten-minute low-stress walk.

Further, poor walking conditions can hinder access to public transportation and limit potential bus stop amenities. Within a half-mile of all transit stops in unincorporated County, only 55% of the roads have complete sidewalks on both sides of the street. Almost 60% of unincorporated residents are within a low-stress ten-minute walk of a bus stop or light rail station. However, only 27% of EJ Community residents live within a ten-minute low-stress walk of a bus stop or light rail station. Improving walking infrastructure and crossing conditions will place more residents within a reasonable low-stress walking distance to stores, schools, public transit, and other essential neighborhood destinations.

## BICYCLE FACILITIES

The unincorporated County's bicycle network includes a mix of shared-use paths, bicycle lanes, and signed bicycle routes (**Figure 12**). There are about 304 miles of bicycle facilities, mostly bicycle lanes, across unincorporated Sacramento County (**Figure 13**).

Although the bicycle network can be dense in many urban regions, given the vast geography of the unincorporated County, the network as a whole lacks connectivity.

*Bike lane on Marconi Avenue. The Marconi Avenue/Mission Avenue intersection includes actuated bicycle signal detection.*

Figure 12. Existing Bikeway Types

**Shared-Use Paths (Class I)**

Dedicated paths for walking and bicycling completely separate from the roadway.

**Bicycle Lanes (Class II)**

Striped lanes for bicyclists. Bicycle lanes can also include striped “buffer” areas between the bicycle and travel lane or between the bike lane and parked cars (sometimes both).

**Bicycle Routes (Class III)**

Signed routes for bicyclists on low-speed, low-volume streets where roadway space is shared with motorists.

*A bike lane on Fulton Avenue, near El Camino Avenue.*

EXISTING BIKEWAY TYPES

**Shared-use paths (Class I):** Dedicated paths for walking and bicycling completely separate from the roadway.

*One of the trail bridges over the American River*

**Bicycle lanes (Class II):** Striped lanes for people bicycling. Bicycle lanes can also include striped “buffer” areas between the bicycle and travel lane or between the bike lane and parked cars (sometimes both).

*A bike lane on Butano Drive near Country Club Centre*

*A buffered bike lane on Hurley Way in West Arden*

**Bicycle routes (Class III):** Signed routes for people bicycling. In more urbanized areas, these are typically lower-speed, lower-volume roadways. In more rural areas, especially in areas without paved shoulders, bike routes can be on higher-speed and higher-volume roadways.

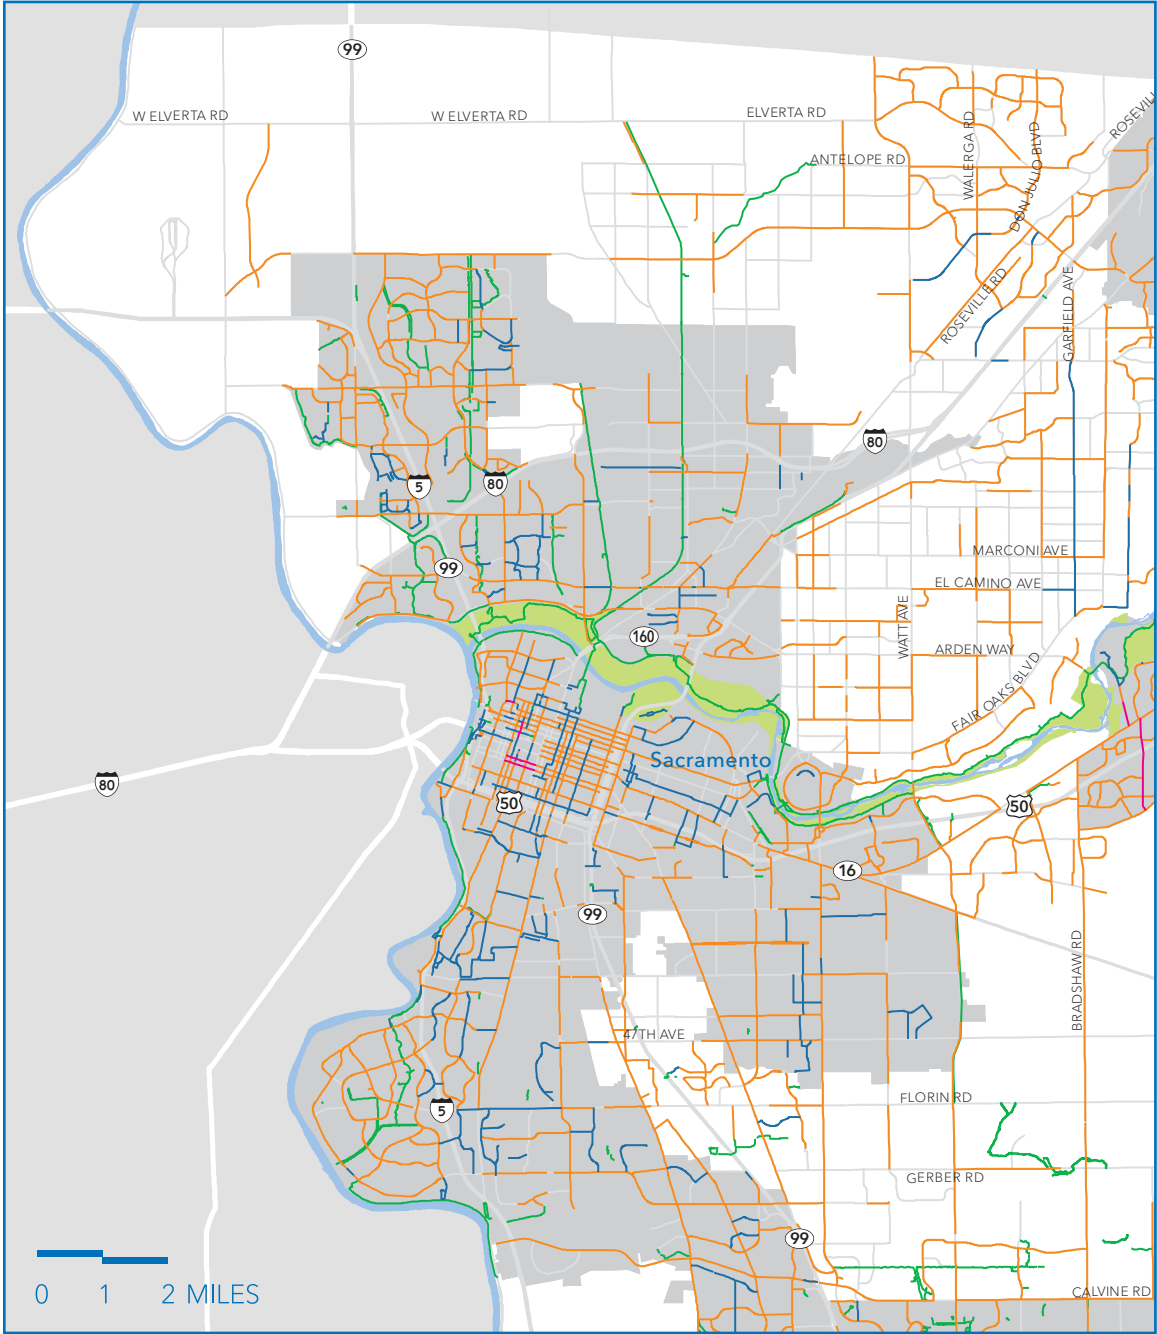

*A bike route with shared lane marking (sharrow), UC Irvine campus.*

## ACTIVE TRANSPORTATION COMFORT

Sidewalks and bike lanes alone are not enough to provide a comfortable and inviting walking or bicycling experience in Sacramento County. Sacramento County experiences extreme heat in the summertime, with average temperatures above 85 degrees Fahrenheit between May and September. Shade, often provided by tree canopy, can encourage physical activity in hotter temperatures while beautifying and supporting the natural environment. Within EJ Communities, North Highland and South Sacramento have a smaller portion of their roadways with shade cover than other unincorporated communities. West Arden-Arcade roughly has a proportional amount of tree canopy compared to non-EJ Communities. The lack of continuous walking and bicycling facilities and inconsistent shade cover can create uncomfortable and stressful conditions for those who walk and bike.

*Twin Cities Road in the southern Delta area of Sacramento County.*

# Walking and Bicycling Safety

Between January 1, 2015 and December 31, 2019, there were 2,038 injury or fatal collisions involving someone walking or biking reported in unincorporated Sacramento County. Of these collisions, 1,000 involved a vehicle colliding with someone walking, and 1,038 involved a collision between a vehicle and someone biking (SWITRS - Statewide Integrated Traffic Records System). A summary of the frequency and relative severity of these collisions is presented in **Table 02**. During the analysis period, there were roughly the same number of pedestrian- and bicycle-involved collisions. The average severity of a collision involving someone walking is more than twice as severe as a collision involving someone biking and more than three times as severe as compared to the average severity across all injury crashes.

*Tree-lined sidewalk along Power Inn Road south of Calvine Road.*

An analysis of collision location and frequency revealed the following trends:

- Far more collisions involving people walking or biking (approximately 3 times as many) occur at intersections as compared to mid-block locations. This is likely due to the increased number of potential conflict points where vehicles and people walking or biking can interact.
- While many more collisions occur at intersections, the severity of injuries incurred along segments is slightly higher, potentially due to increased vehicle speed
- Based on collision severity, collisions involving people walking have twice the injury severity level as collisions involving people biking and more than three times the average severity level over all crashes

Collision types, frequency, and severity in the EJ Communities areas were further analyzed to help focus future investment towards locations that would directly improve any safety deficiencies in these communities. This analysis found that overall, the North Vineyard area had a very low occurrence of collisions involving people walking or biking, due to low density and geography of the area. The other three EJ Communities had comparable collision frequency and severity for collisions involving people walking and biking. The EJ Element also provides a comparison of bike and pedestrian collision rates per 1,000 residents<sup>5</sup>, showing that non-EJ Communities have the lowest collision rate with North Vineyard having a collision rate only slightly higher. South Sacramento however has a rate almost twice as high as non-EJ areas. North Highlands and West Arden-Arcade both have a rate more than twice that of non-EJ areas.

<sup>5</sup>Sacramento County Environmental Justice Element (2019), Figure 11

Table 02. Number of Collisions by Mode and Injury Severity

Collision Type	Number of Collisions	Fatal/ Severe Injury Collisions
Pedestrian Collisions	1,000	348
Bicycle Collisions	1,038	139
Vehicle Collisions	16,190	1,150

**CONTRIBUTING COLLISION FACTORS**

Collision factors provide some clarification on what actions or conditions contributed to each collision. These can include built environment conditions (street type/condition, lighting, etc.), environmental conditions (time of day, weather, etc.), and human behavior. People driving not yielding to people in crosswalks and people crossing not yielding to drivers at non-crosswalk locations were the most frequent contributing factors for collisions involving someone walking in Sacramento County. People failing to yield to vehicles outside of a legal crosswalk was by far the most frequent cause of collisions involving people walking regardless of the collision location, occurring more often than the next four primary causes combined in all scenarios and location types (vehicles violating pedestrian ROW, improper vehicle turning, unsafe speed, and unsafe starting or backing).

In terms collisions involving people biking, riding on the wrong side of the road (biking against the main direction of traffic) and improper turning (making an unsafe turning movement, or failure to signal) were the most frequent contributing factors to collisions. Riding on the wrong side of the road occurring more often than the next five primary causes combined at signalized intersections (traffic signal/sign violation, improper turning, person biking violating vehicle ROW, other hazardous violation, and unsafe speeds) and the next three primary causes combined along stop-controlled segments (improper turning, person biking violating vehicle ROW, and traffic signal/sign violation).

Pedestrian-involved collisions with high speed as a contributing factor resulted in the highest or second-highest injury severity across all locations. Bicycle-involved collisions with the high-speed factor caused the highest average collision injury severity at non-intersec-tion locations.

**HIGH INJURY NETWORK**

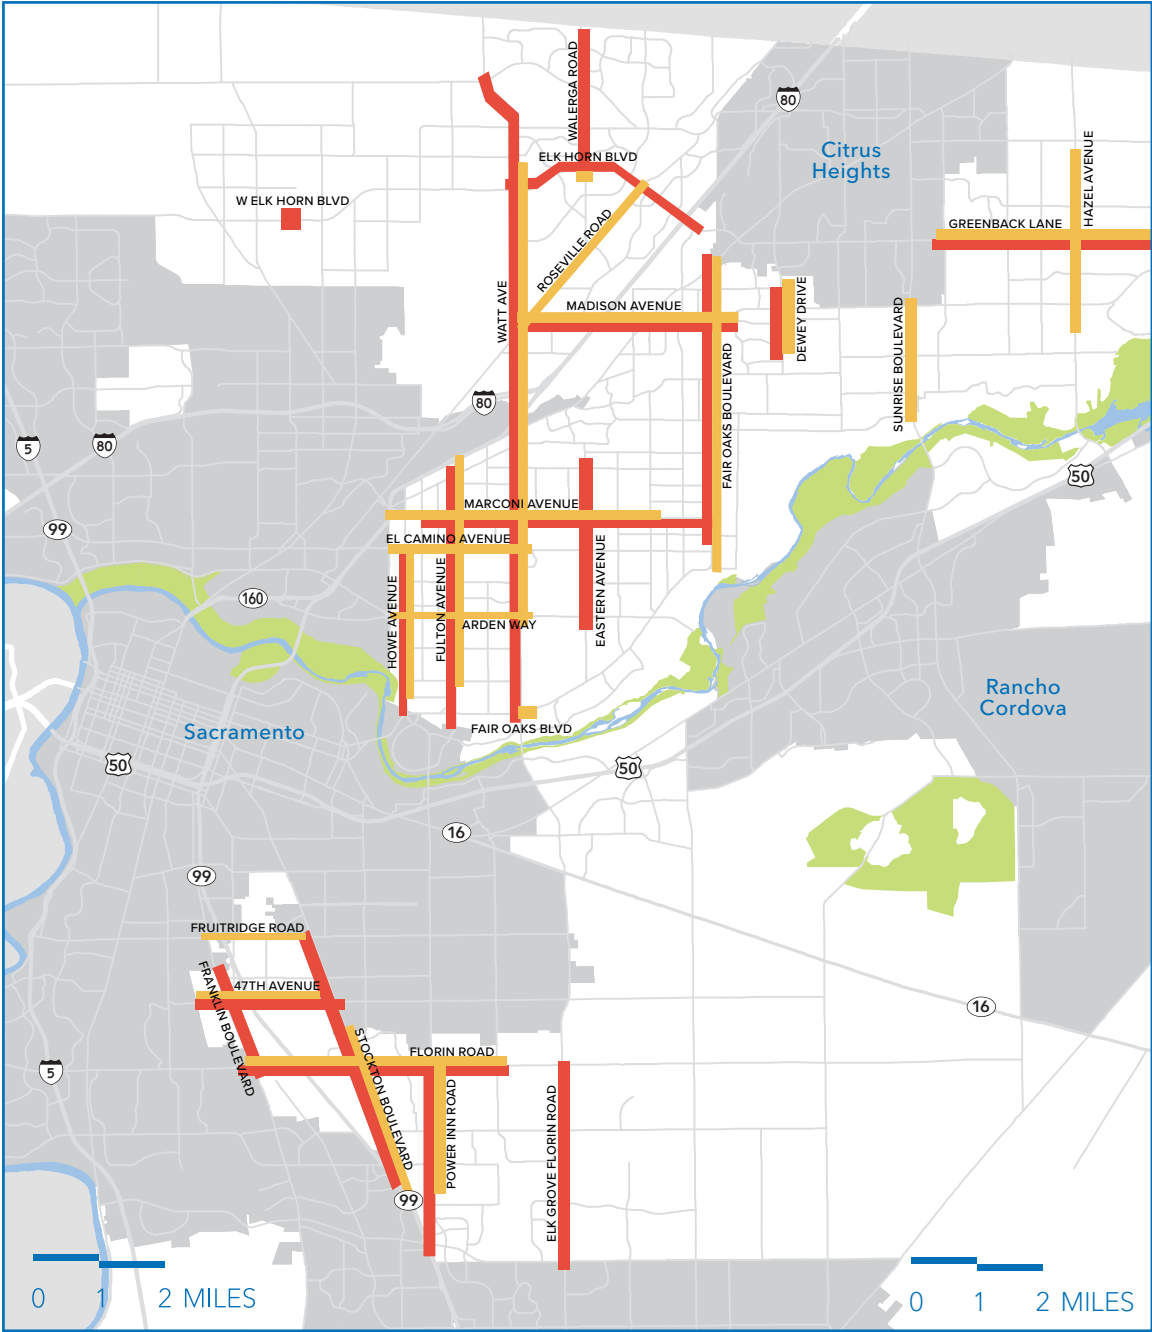

High-injury networks (HINs) were created to highlight corridors that have high concentrations of pedestrian-involved and bicycle-involved collisions, respectively. Each HIN is made of about 20 corridors. Corridors were selected for the HIN based on the both the frequency of pedestrian- or bicycle-involved collisions and the severity of the injuries. **Figure 14** shows the pedestrian and bicycle HINs.

The complete safety analysis, including information on the bicycle and pedestrian HINs, can be found in Appendix A-2.

# Chapter 3: Public Engagement

"I currently walk in Fruitridge Manor. I feel like our community can prosper if we were given the resources to have more outdoor centered activities. ...I would like to walk around areas with a lot of shade and water."

Ken Chang

Age 32

South Sacramento resident for most of his life

# Engagement Strategy

Community engagement is an integral part of the planning process. The ATP included a thorough two-phased public engagement process, primarily done through virtual events due to the COVID-19 global pandemic. The County and its community partners made every reasonable effort to reach a diverse group of Sacramento County residents and stakeholders while following appropriate health and safety guidelines. The ATP’s Public Engagement Plan and detailed event summaries from all engagement phases can be found in Appendix B.

## Phase 1

The County led the first engagement phase from August 2020 through January 2021, with the goals of:

- Understanding perspectives and concerns around active transportation in Sacramento County
- Collecting feedback on the Plan’s goals and objectives
- Building awareness and enthusiasm around the Plan

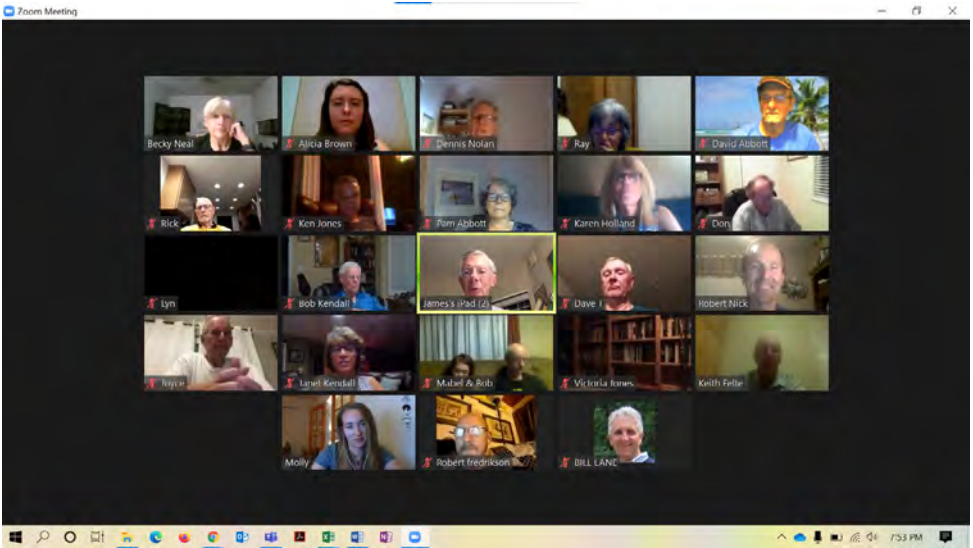

## Phase 2

The County conducted the Phase 2 engagement between April and May 2021, with the intent to:

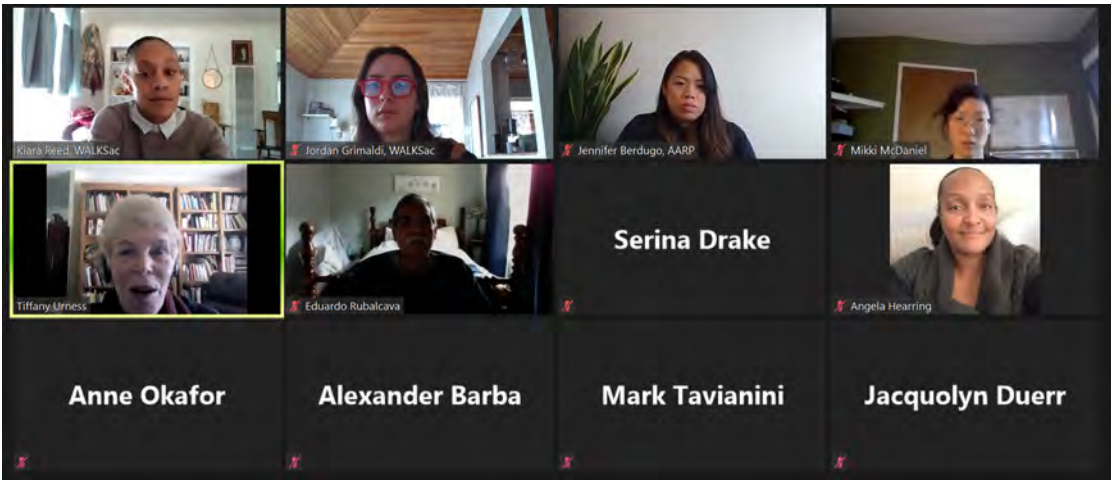

- Share and confirm the accuracy of the key themes and takeaways from the previous phase of public engagement
- Gather feedback on the Plan’s draft infrastructure recommendations
- Learn more about community members’ priorities for implementing active transportation projects

## ENGAGEMENT EVENTS

During Phase 1, project staff met with 37 different organizations through 23 stakeholder meetings. These organizations represent different stakeholder interests, such as Community-Based Environmental Justice Organizations, Health and Disability Organizations, Bike and Transportation Management Agencies, Youth and Older Adult Organizations, Government and Transit Agencies, and Advisory Committees (**Figure 15**). Nearly 200 community members and more than 40 stakeholder groups participated in virtual events during the Phase 1 engagement process. All events were virtual during Phase 1. Community members could also leave comments on an interactive webmap. Comments pointed out specific locations of concern. People also drew their current or preferred walking, biking, and rolling routes. About 300 comments, likes, and dislikes were provided on the webmap during Phase 1.

*A virtual meeting with the Sacramento Bike Hikers*

During Phase 2 engagement, the County engaged with over 50 residents at community workshops, over 80 residents across a series of in-person and virtual pop-up events (**Figure 16**), and received over 2,000 comments, likes, and dislikes on project recommendations.

Detailed community engagement summaries are located in Appendix B.

# Key Public Engagement Themes

Throughout the public engagement process, community members shared their active transportation concerns, needs, and desires. Several key themes emerged:

- **Walking and Rolling Challenges:** Sidewalk gaps, narrow shoulders, lack of shade trees, and uncomfortable crossings are significant challenges for those walking or rolling. Large intersections, railroad tracks, and other infrastructure components are barriers for many people
- **Biking Challenges:** Lack of dedicated bicycle facilities, sharing the road with high-speed vehicles on multilane roads, and lack of shade cover make it stressful and uncomfortable to bike throughout the unincorporated County

- **Access to Transit:** Transit stops and stations with few amenities (benches, shelters, etc.) create uncomfortable and undesirable places for people to wait for their transit vehicle. The lack of shade canopy (trees or engineered structures) can also be problematic in the hotter spring and summer months. Poor sidewalk conditions and lack of ramps can make it challenging to access transit, especially for seniors and people with physical disabilities. Residents also wanted to ensure that the design of new walking and biking facilities (i.e., adding bike lanes or curb extensions) improves and does not hinder transit access and travel

- **Connectivity:** Community members highlighted the need to build a more connected bicycle network that provides safe and comfortable routes to community-serving destinations like schools, parks, trails, and job centers. The need for better river crossings for active transportation users also emerged as a theme
- **Safety and Comfort:** Walking and biking are uncomfortable for many residents across the County due to many of the challenges mentioned above. A lack of active transportation infrastructure, combined with fast-moving vehicles with little or no separation from walking and biking users, impacts comfort and actual and perceived safety

**THIS PAGE INTENTIONALLY LEFT BLANK**

## Chapter 4: Infrastructure Recommendations

"If facilities connecting the community more widely to the only grocery store in the area were provided, I would take that path frequently and look at biking or rolling more often. Currently, the only north/south main road (Rio Linda Blvd) has high speeds and minimal pedestrian facilities."

Kenneth Isenhower

Transportation Engineer, age 31  
Rio Linda/Elverta

# Project Recommendations

Based on the needs, opportunities, and challenges identified through the existing conditions analysis, recommendations were developed through an iterative process with both County staff, partner agency stakeholders, and the community. This chapter describes recommended bicycle and pedestrian projects and provides additional information or toolkits for bicycle boulevards, wayfinding, and green infrastructure.

Recommendations described in this Plan serve as a foundation to create successful, well-used, and safe spaces for people to walk, bike, and roll. These planning-level project recommendations work together to build unincorporated Sacramento County's active transportation network and encourage more people to walk, bike, and roll. In addition to projects identified in this Plan, the County can also install bicycle facilities and pedestrian enhancements on other roadways as appropriate.

Projects outside of Sacramento County's unincorporated rights-of-way play an essential part in the overall completeness, connectivity, and reach of the transportation networks. When applicable, project recommendations have been made in these areas. However, implementing these projects requires additional coordination with other agencies and neighboring jurisdictions.

This Plan proposes pedestrian infrastructure improvements at 194 locations, 192 miles of sidewalks, and 1,218 miles of new or upgraded bicycle facilities (including study corridors).

While the Plan provides recommendations for bicycle and pedestrian projects, in some cases a more detailed master plan is needed. Such is the case for the American

River Parkway, where this Active Transportation Plan only provides a few specific project recommendation on how to improve connectivity to the parkway. A more detailed master plan is needed to improve active transportation connections to the American River parkway trail system for the unincorporated communities of Arden-Arcade, Cordova, Carmichael, Fair Oaks, and Orangevale. The plan would identify gaps in connectivity, needed access improvements, access to existing and future transit, access to schools, access to housing, and employment, connections into the City of Sacramento, Rancho Cordova, and Folsom's trail network and access for environmental justice communities.

# Pedestrian Recommendations

Pedestrian recommendations were developed based on the following steps:

- Incorporate the unbuilt recommendations from the previous countywide planning efforts
- Revise and add recommendations based on the data-driven needs analyses, future master-planned communities, feasibility, and public comment
- Review projects to ensure they form a cohesive, connected network that serves the entire County

## PEDESTRIAN RECOMMENDATIONS

This Plan recommends pedestrian infrastructure improvements at 194 locations across Sacramento County (**Table 03**) and 192 miles of sidewalk gap closures. Pedestrian spot improvement locations include infrastructure recommendations based on the type and size of streets

and the type of intersection control. Each intersection size and control combination has a specific set of infrastructure recommendations designed to improve safety, comfort, and access within that context. These contextualized recommendations provide a toolkit of potential solutions that the County can use to improve these locations' walkability. Specific improvements for each location will be determined on a project-by-project basis using engineering and planning judgement.

Intersection sizes are described below:

- Small intersections: Two small residential streets (people walking typically have to cross two or three vehicle lanes)
- Medium intersections: One small street and one collector street or two collector streets (people walking typically have to cross two to four vehicle lanes)

- Major intersections: One collector street and an arterial or two arterial streets (people walking typically have to cross at least four vehicle lanes)
- Interstate ramp: Any street with a highway interchange

Intersection traffic control falls under three categories:

- Signalized intersection
- Stop sign-controlled intersection (all-way or two-way)
- Uncontrolled intersection

A subset of 26 recommendations includes tailored recommendations specific to each location. These 26 locations are unsignalized locations within EJ Communities that are either along the pedestrian high-injury network or within a quarter-mile of a school. These important locations provide critical connections to schools, parks, and other neighborhood destinations within historically underserved communities.

**Figure 17** show the location of each pedestrian improvement. **Table 03** displays the number of recommendations in each category. These recommendations are defined in the Pedestrian Toolkit (pages 84-102). The full table of all 194 pedestrian improvement locations can be found in Table C-1 of Appendix C. The full list and maps of proposed sidewalk gap closures can also be found in Figure

C-1 and Table C-2 within Appendix C. Pedestrian Districts were developed by the County's Planning and Community Development Department and are commercial corridors that have or could have high volumes of pedestrian traffic where improvements should be concentrated. The districts were carried over as part of the 2007 Pedestrian Master Plan are also included within pedestrian recommendation maps.

Table 03. Pedestrian Recommendation by Intersection Size and Control Type

	Signalized	Stop-controlled	Uncontrolled	Total
Small Intersections	12	18	7	37
Medium Intersections	65	8	7	80
Major Intersections	44	2	2	48
Interstate Ramps	3	-	-	3
Specific Project Locations	2-	21	3	26
Total	126	49	19	194

PEDESTRIAN TOOLKIT<sup>6</sup>

This Plan’s toolkit groups pedestrian infrastructure into six categories:

- Sidewalks, trails, and medians
- Intersection and street design
- Pavement markings
- Pedestrian-actuated beacons
- Street furniture
- Studies

Example infrastructure components from each of the categories are provided below.

<sup>6</sup> Items with an asterisk are included in the approved Neighborhood Traffic Management Program Tool Box. The Tool Box can be accessed here: <https://sacdot.saccounty.net/Pages/NTMP-ToolBox.aspx>

SIDEWALKS, SHARED-USE PATHS, AND MEDIANS

Sidewalks

Sidewalks provide dedicated space for people walking and rolling. Sidewalks are raised from the roadway and sometimes have a planting strip for increased separation from the street. Obstructions like utility boxes, signs, and poles can limit available sidewalk width. The County should install and move existing street furniture and utilities on sidewalks to maintain a clear path of travel; it is critical for physical accessibility. Items obstructing walking and rolling paths force people to use alternate routes or go around these objects on private property or in the street.

Sidewalk on Florin Road, near Southgate Plaza.

## Shared-Use Paths

Dedicated paths for walking and bicycling completely separate from the roadway. When paved with asphalt or concrete, trails can include markings to encourage the separation of modes.

*People jogging along American River Parkway trail.*

### Curb Extensions

Curb extensions push the curb into the street and can provide several valuable traffic calming and safety benefits. Curb extensions shorten the crossing distance for people walking or rolling, provide improved visibility at intersections for drivers, and provide additional pedestrian queuing space. Curb extensions can be installed at intersections or mid-block. They can be made with permanent materials like cement or implemented as a "quick-build" project with pavement markings, detectable warning surfaces, paint, and bollards/delineators.

*A curb extension with green infrastructure, Carolan Ave, Burlingame.*

### Curb Ramps

Curb ramps allow for smooth, accessible transitions between the sidewalk and street level. Curb ramps are essential for those with special mobility needs, strollers, and many other users. Ramps must be built to current ADA standards.

*The corner of Diamond Ranch Drive and Gerber Road with pedestrian countdown signal head and curb ramp with tactile warning surface.*

## INTERSECTION AND STREET DESIGN

### Intersection Redesign

Intersections are not always symmetrical. Intersections can have confusing or asymmetric designs when more than two streets come together or when two streets come together at non-90-degree angles. Design components like curb extensions, painted buffer areas, and medians can make these intersections more inviting, less stressful, and less confusing for active transportation users and people driving.

*The intersection of Fair Oaks Boulevard and Manzanita Avenue.*

### Free Right Turn Lane/ Slip Lane Removal

Free-right turn lanes facilitate increased vehicle throughput and faster turns at intersections at the expense of the safety and movement of people walking and biking. Rates of drivers yielding to people walking at slip lanes are much lower than at other crossing locations. Intersections with slip lanes and bike lanes also create a bike mixing zone, as people biking need to move away from the curb and across the right turn lane to continue straight through the intersection. Many designs can be implemented during the slip lane removal process, including bulb outs and other curb work to adjust intersection geometry. Removing slip lanes can impact traffic flow through the intersection; some impacts may be mitigated through signal timing and other engineering adjustments.

*Slip lane at Rockingham*

### Traffic Calming

Traffic calming is the implementation of roadway changes to slow down vehicle traffic. SacDOT can consider various tools to slow vehicle traffic, including speed bumps, chicanes, speed feedback signs, and other items. Traffic calming is also an essential component of bicycle boulevards (see page 114 for more details on bicycle boulevard elements).

*A speed table on Madison Avenue*

**Pedestrian Push Buttons and Signal Heads**

All new and redesigned intersections with pedestrian crossings need to be built to current ADA standards. These standards include using accessible pedestrian buttons and signal heads that audibly communicate information about location and pedestrian signal timing for those with mobility and visual impairments.

*An ADA compliant push button next to a curb ramp with tactile warning surface across from Kaiser Medical Center off of Morse Avenue*

## PAVEMENT MARKINGS AND CROSSWALKS

### Advance Yield and Advance Stop Markings

Advance yield pavement markings, also referred to as “shark's teeth,” are markings placed on the roadway 20'-50' before a mid-block crosswalk or crosswalk at an intersection approach without a signal or stop sign.

Advance stop lines are solid white lines that extend across intersection approach lanes. They indicate the point behind which vehicles are required to stop in compliance with a STOP sign or other traffic control device that requires vehicles to stop, like a pedestrian-hybrid beacon.

*Advance stop markings on a neighborhood street, Burlingame*

Crosswalks

Transverse crosswalks consist of two thick lines that demarcate pedestrian right-of-way at intersections and mid-block locations. High-visibility crosswalks are marked with wide bars, drawing additional attention and awareness to the crossing. There are multiple high-visibility crosswalk designs (continental, ladder, etc.).

In school zones, these crosswalks are yellow.

*A high-visibility crosswalk across Northrop Avenue connecting to Swanston Park and Community Center*

### Decorative Crosswalks

Decorative crosswalks can add a placemaking element to the street while still serving a marked crosswalk's primary visibility and awareness objectives. Decorative crosswalks can be themed to reflect the surrounding neighborhood or nearby destinations. Decorative crosswalks must meet specific design parameters to remain compliant with state and federal standards; most importantly, they include transverse markings around any decorative pavement treatment.

### Speed Tables, Raised Crosswalks, and Raised Intersections

Speed tables reduce vehicle speeds by elevating the entire wheelbase of a vehicle (unlike a speed bump that raises each axle individually). Speed tables can include a mid-block raised crosswalk; in these cases, the height of the speed table matches the sidewalk. This treatment makes people walking more visible to approaching motorists and also slows vehicles.

Raised intersections elevate the entire intersection to the sidewalk level, providing improved visibility of people walking and reducing vehicle speeds for all intersection approaches. Raised intersections are typically applied in high-pedestrian areas.

*A raised crosswalk in front of the public library on C Street in Hayward*

## Trail Markings

Paved trails can include striping to demarcate separate areas for people walking and biking. Encouraging spatial separation can reduce conflicts, particularly on crowded trails with high pedestrian usage, and improve the efficiency and consistency of bicycle travel.

*Harold Richey Memorial Bridge  
over the American River*

## PEDESTRIAN-ACTUATED BEACONS

### Rectangular Rapid Flashing Beacon (RRFB)

RRFBs are user-activated flashing lights used at unsignalized intersections or mid-block crossings. These beacons alert motorists to the presence of people in the crosswalk. These are most commonly used on two- to four-lane roadways. RRFBs are not universally accessible and can be difficult for people with visual impairments to use.

*RRFB on California Drive, Burlingame*

**Pedestrian-Hybrid Beacon (PHB)**

A pedestrian hybrid beacon is a signal designed to increase the safety of people walking at unsignalized locations on multilane roadways. Thresholds for installation vary based on the posted speed limit, crossing distance, vehicular volumes, and volumes of pedestrian crossings.

*PHB crossing Grand Avenue, Oakland*

STREET FURNITURE AND UTILITIES

Street Trees

Street trees are an essential component of streetscape design. Trees provide shade, which in hotter climates like Sacramento County, can help encourage physical activity (walking, biking, and rolling) while beautifying and supporting the natural environment. Appropriate tree selection is vital to minimize tree maintenance costs, reduce the impact of roots disrupting sidewalks, and limiting the need for tree trimming to maintain clear sightlines and travel paths.

*A tree-lined segment of Bradshaw Road near Tribeca Drive*

## Lighting

Pedestrian-scale lighting improves visibility for both people walking and driving, particularly at intersections. Lighting can be achieved on one light pole (one light for the road and one light for the sidewalk) or separate poles. These lights focus on illuminating the sidewalk, not the roadway. Lighting is also an essential consideration along trails.

*Pedestrian-scale lighting in downtown  
Burlingame*

### Street Furniture/Amenities

Street furniture includes benches, transit shelters, trash cans, newsstands, and other items within the public right-of-way. These items can help to make the walking or rolling experience more comfortable and visually appealing. Transit shelters provide a location out the elements for people to wait, benches provide people walking a place to sit and rest, trash cans can help reduce litter by providing a place for people to throw their trash away, etc.

*A shaded SacRT bus stop with bench on Butano Drive*

## STUDIES

### Stop Signs and Traffic Signals

Stop signs and traffic signals are traffic control devices used to regulate traffic through an intersection. Implementing stop signs and traffic signals is regulated by the CA-MUTCD and requires a technical analysis before implementation.

*Traffic signal at Marconi Avenue/Mission Avenue*

### Complex Intersections and Crossings

While most of the locations examined for the Plan have recommendations, some sites will require additional study and traffic analysis to determine an appropriate alternative that improves safety for all users. Other sites will require coordination with other agencies.

*The intersection of Florin Road and Stockton Boulevard. Source: Google Maps.*

# Bicycle Recommendations

The County developed bicycle recommendations through an iterative process with both County staff and County residents:

- **Step 1:** Incorporated the unbuilt recommendations from the previous Countywide bicycle plan and other planning efforts
- **Step 2:** Revised and added recommendations based on the data-driven needs analysis, future master-planned communities, feasibility, and other factors
- **Step 3:** Reviewed projects to ensure they form a cohesive, connected network that serves the entire County

*A person biking on Garfield Avenue.*

BICYCLE RECOMMENDATIONS

This Plan recommends 108 miles of upgraded bicycle facilities and 1,110 miles of new dedicated bicycle corridors for a total of 1,522 miles of recommendations across unincorporated Sacramento County (**Table 04**). Bicycle recommendations can be seen in **Figure 18**. The full list of bicycle projects can be found in Table C-3 and a mapbook of recommendations in Figure C-2.

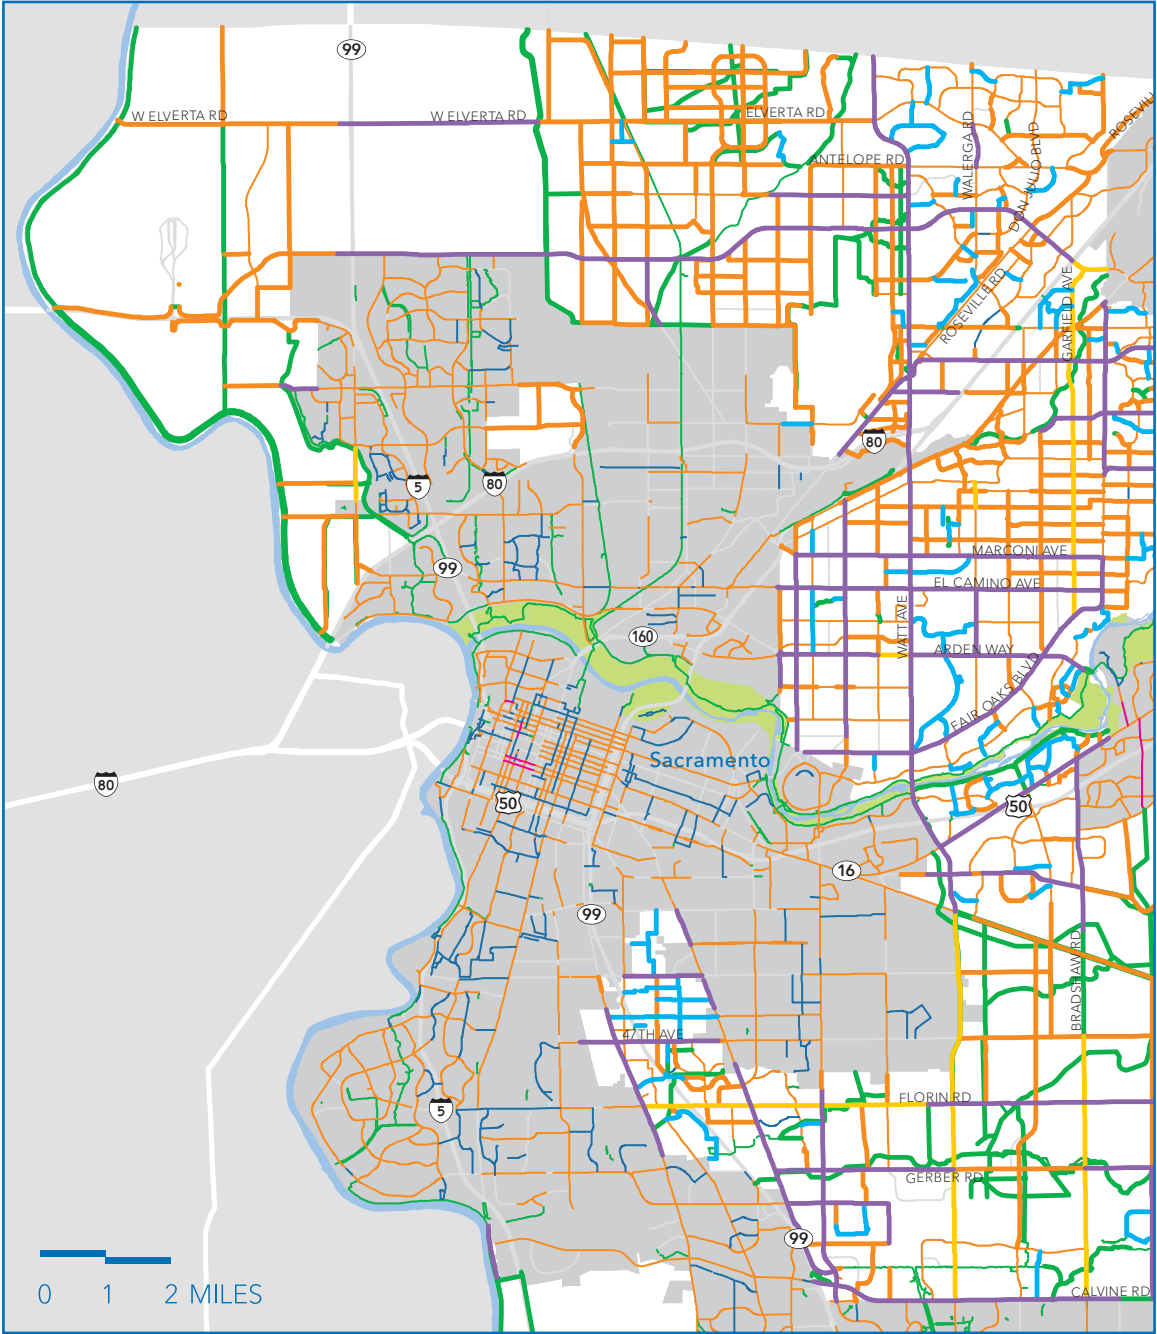

Table 04. Existing and Recommended Bicycle Facilities by Class

	Existing (mi)	Proposed (mi)	Total (mi)

**BICYCLE TOOLKIT**

This toolkit provides descriptions and images of each type of recommended bicycle facility. The following section provides details on the infrastructure tools that can create bicycle boulevards.

**Bicycle Facilities**

**Class I Shared-Use Path (trails)**

Dedicated paths for walking and bicycling completely separate from the roadway.

**Class II Bicycle Lane**

Striped lanes for people bicycling.

**Class IIB Buffered Bicycle Lane**

Bicycle lanes that include a striped “buffer” area either between the bicycle lane and the travel lane or between the bicycle lane and parked cars (sometimes in both locations).

**Class IIIB Bicycle Boulevard**

Routes on low-speed, low-volume streets where roadway space is shared with people driving, enhanced with traffic calming features or other treatments to prioritize the comfort of people biking. A toolkit of bicycle boulevard strategies can be found on page 114. Treatments will be specific to each corridor and determined based on local community input and planning and engineering judgment.

Berkeley, CA.

Doyle Street, Emeryville.

**Class IV Separated Bikeway**

On-street bicycle facilities with a physical barrier between the bicycle lane and motor vehicle lane(s). Barriers can include bollards, curbs, elevation, or parking. These facilities may be bidirectional or unidirectional.

*Rosemead Boulevard, Temple City*

*Walnut Avenue, Fremont*

*Main Street, Los Angeles*

*Polk Street, San Francisco*

### Class IV Study Corridors

The ATP includes over 145 miles of recommended study corridors for Class IV separated bikeways. These corridors are important pieces of the County's overall bicycle network and must include facilities that can provide comfortable, low-stress connectivity through and across multiple neighborhoods. Due to constraints within the built environment (such as limited available roadway width), these corridors require additional study and community engagement opportunities before formal recommendations can be made.

Additional studies will typically identify the roadway changes that would be necessary in order to install a bicycle facility. These changes may include removal of street parking or removal of vehicle travel lanes. In some cases, a road diet (reduction of travel lanes while maintaining a turning lane) may be appropriate. The study process would include a dedicated community engagement process with local stakeholders and community members. The design of these facilities will include the needs of paratransit riders, people with disabilities, and other users with special needs to ensure accessibility and will also consider proposed pedestrian improvements to minimize design conflicts and ensure project feasibility. The study may result in a recommended Class IV separated bikeway design; however, it may also recommend a different bike facility.

**BICYCLE BOULEVARD TOOLKIT<sup>7</sup>**

Unlike other bicycle facilities, bicycle boulevards are unique in that solutions for each corridor can vary based on specific community needs and desires. The toolkit of available treatments allow each street's specific design to fit its needs. Bicycle Boulevards can create an environment where bicycle travel is prioritized in a shared space with cars. Bicycle boulevards have an important role within the proposed bicycle network. These recommendations provide connections within communities to the larger bicycle network and form critical connections to neighborhood destinations like schools, parks, and libraries. The traffic calming effects of bicycle boulevards not only make it more comfortable to bike, but also create more enjoyable environments for people walking. The safety benefits of slower corridors benefit all road users, people biking, walking, and driving. Bike boulevards have also been recommended to

help close gaps in the bicycle network where bike lanes or other dedicated bike facilities are more complex to implement, strengthening the overall network and improving connectivity across the County.

The County will analyze individual corridors to determine which treatments reflect the solutions that will bring about the highest increase in comfort and safety for people bicycling. Selected treatments will also incorporate the needs and desires of nearby residents and stakeholders. Treatments will vary from simple signage and striping only to more advanced intersection redesigns. This Plan does not provide specific treatment recommendations for individual bicycle boulevard corridors.

There are three primary categories of improvements:

- Signs and pavement markings
- Vehicle speed management
- Vehicle volume reduction

<sup>7</sup>Items with an asterisk are included in the approved Neighborhood Traffic Management Program Tool Box.

## Pavement Markings and Signage

### Pavement Markings\*

Bicycle boulevards can have unique pavement markings or sharrows to reinforce that the street is a shared space for people biking and driving. Sharrows may also have green backing to increase driver awareness. Pavement markings can also include edge line or centerline lane striping to delineate roadway space clearly.

*Bicycle boulevard pavement markings in Berkeley*

### Wayfinding Signs

Wayfinding is an essential component of the overall bicycle network but plays an even more significant role on bicycle boulevards. Bicycle boulevards may weave through neighborhoods, increasing the importance of signage to help users easily navigate their trips. Wayfinding can also help raise awareness of the presence of the bicycle boulevard.

*American River Parkway wayfinding sign*

## Vehicle Speed Management

### Reduced Speed Limits

In some areas, especially around schools, reducing the speed limit below 25 mph may be a helpful strategy in slowing cars and making people biking and walking more comfortable in the corridor.

### Neighborhood Traffic Circles\*

Neighborhood traffic circles are an alternative intersection treatment to a signal or stop sign. Traffic circles can regulate the flow of traffic while adding a traffic calming element.

*Neighborhood traffic circle, Burlingame*

### Bulb Outs\*

Bulb outs, also called curb extensions, extend the curb into the street. Curb extensions slow vehicle turning movements by tightening curb radii and forcing cars to make sharper turns. In mid-block settings (with mid-block crosswalks), they also physically and visibly narrow the roadway, encouraging slower speeds. Bulb outs shorten crossing distances for people walking, provide improved visibility of people walking and biking at intersections, and provide additional pedestrian queuing space.

*Curb extension on Palmetto Avenue, Pacifica*

## Chicanes

Chicanes add gentle curves to otherwise straight streets. Adding curves to the road slows car traffic by narrowing the travel lane and requiring cars to follow the curve. The lane adjustments can be created with striping or with offset curb extensions/landscaping.

*Bicycle boulevard with chicane in Berkeley*

### Pinch Points

Pinch points, also known as chokers, narrow available roadway width with two curb extensions. Limiting the available width forces people driving to slow down to navigate the pinch point.

### Speed Humps/Speed Lumps\*

Speed humps (and similar devices) span the roadway's width and encourage cars to slow down. Speed humps have a design speed of 15-20 mph. Speed lumps are similar to speed humps but are designed with slots for emergency vehicles, buses, and other large vehicles. The vertical deflection from speed humps and speed lumps can be uncomfortable for people biking; speed lumps may be a preferred option on bicycle boulevards as people biking can also use the wheel cut.

*Speed humps on Valley Wood Drive*

### Median Islands/Center Island Narrowing\*

Median islands and center island narrowing are variations of roadway medians that provide similar traffic calming benefits but can have different aesthetic and crossing pedestrian crossing effects dependent on their design. Median islands create a pinch point for traffic in the center of the roadway slowing through and turning vehicles and providing shorter crossing distances for people walking when used in tandem with a marked crossing. Medians can also divert through traffic onto other corridors where drivers can move faster. Center island narrowing medians are typically placed at neighborhood entrances and act as gateways into the neighborhood. This provides similar benefits to standard medians and include more placemaking elements like textured pavement and landscaping.

*Median Island on a residential street.*

## VEHICLE VOLUME REDUCTION

### Right-in/Right-out Diverters

Right-in/right-out diverters can be installed to allow people biking to proceed straight through the intersection while directing motorists to turn right. The island can accommodate bicycle access to the corridor while reducing conflicts and allowing local and emergency vehicles. Left turns from the major street onto the bikeway are typically prohibited, while right turns are still allowed.

*People biking on bicycle boulevard.*

### Full Diverters

Full diverters block all motor vehicles from continuing on a neighborhood bikeway, while people biking can continue unrestricted. Full closures can be constructed to be permeable to emergency vehicles.

*Full diverter on a bicycle boulevard, with emergency vehicle access, in Palo Alto.*

BICYCLE SUPPORT FACILITIES

Bicycle Parking

Bicycle parking is typically divided into short-term and long-term parking. Short-term parking is meant to accommodate people biking who park for up to two hours, e.g., shoppers, post office customers, and library patrons. Long-term parking, such as bike lockers, is for riders who park over two hours, e.g., people taking transit, employees, students, and residents. New developments within Sacramento County are required to provide bicycle parking based on the Zoning Code (Section 5.9.9). For already developed areas, the County should coordinate with local businesses, property owners, and open space agencies to install secure bicycle parking near major destinations across the County. The installation of bike racks is subject to environmental, security, right-of-way, maintenance, and property owner factors.

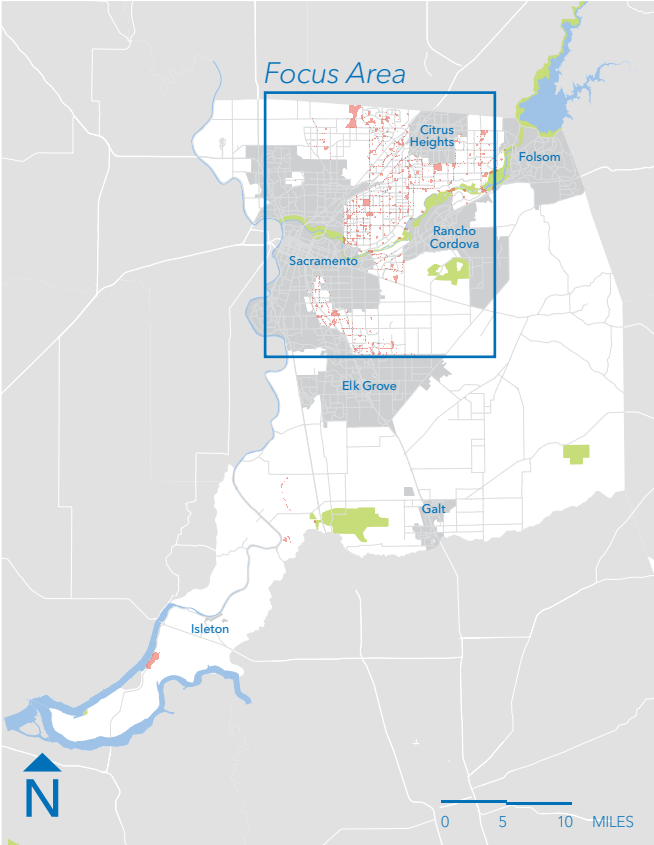

Demand for bicycle parking across already developed areas was analyzed for recommendations by examining land use (zoning), destinations (parks, libraries, etc.), and results from the origin-destination analysis in a weighted model to approximate demand for bicycle parking. Bike parking demand locations are shown in **Figure 19**.

Figure 19. Bike Parking Demand

Focus Map

Key Map

Legend

- BIKE PARKING DEMAND**
- Areas of High Demand
- 
- Unincorporated
  - Incorporated Cities

## Bicycle Racks

Bike racks provide short-term parking and should accommodate visitors, customers, and others expected to depart within two hours. Racks should follow an approved standard, with appropriate placement and weather protections. Racks should also accommodate a variety of bicycle types.

*A group of U-rack bicycle racks in Rancho Cordova*

*Decorative "peace sign" bike racks located off of Winding Way*

Bicycle Corrals

On-street bike corrals (also known as on-street bicycle parking) consist of bicycle racks grouped in a common area on the street, typically in a former car parking space. Bicycle corrals are reserved exclusively for bicycles and provide a relatively inexpensive solution for high-capacity bicycle parking. Each motor vehicle parking space could be replaced with approximately 6-10 bicycle parking spaces.

*In-street bicycle corral, Los Angeles*

## Bicycle Lockers

Bike lockers offer a secure, long-term parking area for bicycles. They typically provide a semi-enclosed space that provides a higher level of security than standard bike racks. They are usually accessible via key-card, combination lock, or key. Increased security protections enable biking to be a practical transportation option for those whose most significant concern is theft and vulnerability.

Locations of current bike lockers at SacRT light rail stations are shown below:

- |                          |                                |                                 |              |                  |                             |
|--------------------------|--------------------------------|---------------------------------|--------------|------------------|-----------------------------|

| • Sunrise                | • Power Inn Glenn <sup>9</sup> | • Florin                        | • Franklin   |                  |                             |

<sup>9</sup>For more information on Sacramento Regional Transit's bike locker program or to request a lease agreement, please send an email to Robert Hendrix at rhendrix@sacrt.com or call (916) 321-BUSS (2877).

<sup>10</sup>For information on how to lease a bike locker at Iron Point, Glenn or Historic Folsom, call the City of Folsom at 916-355-7285. In addition, many light rail stations have ribbon-style bike racks available for no charge.

*Bike lockers at a transit station*

Bicycle lockers are also available at other locations across Sacramento County.

## End-of-Trip Facilities

Besides providing secure bicycle parking for people biking, jurisdictions, businesses, and employers should also offer end-of-trip facilities. End-of-trip facilities include changing rooms, clothes lockers, restrooms, and showers. These promote and facilitate active trips (especially commute trips) by making bicycling (and walking) commutes more practical. Multiple studies have found that robust end-of-trip facilities can encourage additional walking and biking commuting trips by removing obstacles for active transportation users, such as a desire not to show up to work sweaty or knowing they have a secure place to store their belongings. In addition to making walking and biking more attractive, these studies also touted many workplace performance benefits from employees who used active transportation to get to work, such as arriving to work with better focus, having higher productivity, and increased happiness.<sup>11</sup>

<sup>11</sup>"End-of-trip facilities for bicycle riders." Queensland Transport. Queensland Government. (2006). [https://bikeleague.org/sites/default/files/BFB\\_Queensland\\_End\\_of\\_trip\\_facilities\\_for\\_bicycle\\_riders.pdf](https://bikeleague.org/sites/default/files/BFB_Queensland_End_of_trip_facilities_for_bicycle_riders.pdf)

## Bicycle Detection at Signalized Intersections

Bicycle detection notifies the traffic signal controller that a person bicycling is waiting to cross the intersection. Bicycle detection provides similar functionality to pedestrian crossing buttons or vehicle loop detectors. There are various methods of detecting bicycles at intersections, but the most common methods are bicycle loop detectors and cameras. Bicycle detection at signals can provide many benefits to people biking including a reduction in travel delay, improving the safety and convenience of bicycling, discouraging red-light running by people bicycling, and prolonging the green phase to allow people bicycling to clear an intersection.<sup>11</sup>

# Additional Infrastructure Toolkits and Information

## WAYFINDING

### Navigational Elements

The fundamental family of signs that provide people walking and biking with navigational information consists of decision, confirmation, and turn signs, described in **Figure 20** and **Table 05**.

**Figure 21** provides typical locations of signs. Decision signs (D) are located before an intersection of two routes. Turn signs (T) are found before turns. Confirmation signs (C) are located after the turning movement and periodically along routes for reassurance. Guidance on bicycle wayfinding signage can be found in the California Manual on Uniform Traffic Control Devices.

### Signage Technical Guidance

A variety of standards and guidelines influence both the designs and placement of wayfinding elements in Sacramento County. The Manual of Traffic Control Devices (MUTCD) provides standards and guidelines for the design, size, and content of wayfinding signs. However, many

jurisdictions have implemented unique signs to enhance visibility while reinforcing local identity.

### Bicycle Guide Signs

Both on-street and off-street bicycle facilities are required to follow the standards within the MUTCD. The State of California has adopted specific state standards for all traffic control devices called the CA MUTCD, which supersedes the MUTCD:

- D11-1: Bicycle Route Guide Sign
- D1-1b: Destination Supplemental Sign
- M7-1 through M7-7 Directional Arrow Supplemental Sign

Sacramento County Department of Regional Parks has an adopted American River Parkway Signage Manual which should also be referenced when considering trail or trailhead signage in other areas of the County. The combination of standard signs

with modifications allows for consistent signage throughout Sacramento County while branding the network.

### Community Wayfinding

Community wayfinding signs allow for an expression of community identity, reflect local values and character, and provide more information. California has

not yet adopted MUTCD community wayfinding standards, but many communities use these.

### Other Wayfinding Elements

In addition to the core elements, several other wayfinding elements should be considered:

- Distance and time**  
 Adding distance in familiar units can be a helpful encouragement tool for bicycling and walking. Some jurisdictions include travel time.
- Street name sign blades and sign toppers**  
 Some jurisdictions have enhanced street name sign blades to recognize bikeways and major pedestrian routes
- Pavement markings**  
 Directional pavement markings indicate confirmation of bicycle or pedestrian presence on a designated route and indicate turn locations. Pavement markings can often be more visible and can help supplement or reinforce signage

[https://localwiki.org/davis/Bike\\_Loop/\\_files/Davis\\_Bike\\_Loop.JPG/\\_info/](https://localwiki.org/davis/Bike_Loop/_files/Davis_Bike_Loop.JPG/_info/)

Table 05. Wayfinding Sign Information

Decision Sign	Confirmation Sign	Turn Sign
<ul style="list-style-type: none"><li>• Clarify route options when more than one is available</li><li>• Typically include a system brand</li><li>• Up to 3 destinations</li><li>• Distance in time or miles (based on 10 mph or 6 minutes per mile)</li><li>• FHWA standard size for three destinations is 18" H x 30" W</li><li>• Municipalities can modify, often 24" W x 30" or 36" H, and place a bicycle symbol at the top</li><li>• Generally, 6" of vertical space per destination</li><li>• Sign width not standardized by the CA MUTCD</li></ul>	<ul style="list-style-type: none"><li>• Placed after turn movement or intersection to reassure that they are on the correct route</li><li>• Standard D11-1 series signs, system brand mark, and route or pathway name may be included</li><li>• The minimum size of 24" W x 18" H should be used for bike route signs, both on and off-street</li></ul>	<ul style="list-style-type: none"><li>• Clarify a specific route at changes in direction</li><li>• Used when only one route option is available</li><li>• Standard D1-1 series sign: system brand mark, route or pathway name, and/or a directional arrow may be included</li><li>• A minimum of 6" should be used for arrow plaque; the width may vary with destination length</li><li>• Standard turn arrows (M5 and M6 series) may be used to clarify movements</li></ul>

Wayfinding Sign Note: Vertical clearance beneath signs shall conform to the CA MUTCD.

# Wayfinding

Figure 20. Wayfinding Sign Types

Figure 21. Wayfinding Sign Placement

# Green Infrastructure

Active transportation improvements often provide additional opportunities to allow streets to function as more than just public space and mobility corridors—roads can become a vital, functional component of the natural ecosystem. Green infrastructure is a catchall term that describes sustainable stormwater management practices and infrastructure. As urban landscapes have paved and built over green space, they have disrupted hydrological cycles and have required stormwater infrastructure to manage stormwater runoff and protect water quality. Green stormwater infrastructure can reintroduce ecological functions back into the environment. Through strategies including biofiltration planters, bioretention swales, trees, and permeable pavement surfaces, more water can return to the ground and natural systems while reducing strain on existing water systems.

These stormwater strategies can be implemented in various transportation facilities, including sidewalks and trails, planted buffers, curb extensions, medians, and landscaping projects.

*An example of a planted sidewalk buffer that could be designed with green infrastructure components*

# School Zone Speed Limits

Through Assembly Bill 321, local governments can extend school zones up to 1,000 feet and reduce speed limits within 500 feet of a school site to 15 mph in residential neighborhoods or on highways with speed limits of 30 mph or less when children are present.

At 15 mph, more than 90 percent of people walking are likely to survive a crash with only minor injuries. As speeds increase, however, crash severity increases dramatically. At 30 mph, most collisions result in severe pedestrian injuries, and nearly half may be fatal. At 40 mph, 90 percent of people walking will die in a crash. Reducing speeds even slightly can have a profound effect on safety for people walking and bicycling to school.

This Plan recommends the County consider this change around eligible schools. AB 321 requires engineering and traffic surveys to indicate that the existing speed limit is not appropriate.

*A family walking to Pacific Elementary*

# Chapter 5: Program Recommendations

Source: Jibe / North Natomas

# Educational Programs

This chapter describes recommended bicycle- and pedestrian-related programs for Sacramento County. Programs are organized by the following categories: education, encouragement, support, safe routes to school, evaluation, and infrastructure. All program implementation is dependent on funding.

## ADULT BICYCLE EDUCATION

These courses are typically based on a League of American Bicyclists curriculum that focuses on how people bicycling should behave to be safer, more predictable, and more confident riding on streets both with and without dedicated bicycle facilities. Class topics may also include bicycle maintenance, riding at night/in bad weather, and other essential topics. These programs are usually maintained through a partnership between the jurisdiction and local advocacy groups.

## TRAFFIC TICKET DIVERSION PROGRAM

Bicycle traffic ticket diversion programs are coordinated efforts between local law enforcement, traffic court, and bicycle advocacy organizations (that have education programs). People bicycling who have been issued a traffic ticket will have the option to attend a bicycle traffic safety class in lieu of paying the ticket fine. The safety

*An instructor leading a bicycle education class.*  
Source: Jibe

Jibe / North Natomas

classes would also be available to the general public. Santa Cruz County has implemented this as their “Bike Traffic School Program.”

**DRIVER EDUCATION PROGRAMS/CAMPAIGNS**

Educational campaigns focusing on driver education is another tool that can work towards changing behavior and increasing awareness. The California Office of Traffic Safety (OTS) regularly has grant opportunities to fund educational campaigns that support pedestrian, bicycle, and roadway safety. These programs support OTS's goals of reducing injuries and fatalities of people walking and bicycling. Programs attempt to raise awareness about traffic rules, rights, and responsibilities for people driving, walking, or biking. Example campaigns that other jurisdictions have ran in the past include: “Pedestrians Don’t Have Armor” – CA OTS, “My Mom/Dad Works Here” – universal, and continuously updating a sign that shows driver yielding compliance at the intersection – St. Paul.

**DRIVER AWARENESS**

Driver awareness programs work hand-in-hand with driver education programs. Awareness programs help people driving become more familiar with local infrastructure and gain a better understanding of roadway signs, roadway striping patterns, and expected bicycle behavior. Awareness programs are especially important as new or unfamiliar infrastructure elements are introduced to communities. The programs can help communities become more comfortable with the facilities and understand their intended use.

*Learning to ride a bicycle at Prospect Hill Park in Gold River*

# Encouragement Programs

## SOCIAL WALKING AND BIKING

People who are uncomfortable bicycling or walking alone or unfamiliar with the best routes to use will benefit from having a group to show them the way. Outings can also be informal education opportunities to remind participants about safe walking and bicycling behavior. Activities should target different modes and user groups (kids, seniors, people with mobility impairments, etc.). Youth centers, senior centers, and community centers also can be partners in organizing and hosting these activities.

## BICYCLE FRIENDLY BUSINESS PROGRAM

Bicycle Friendly Business programs recognize businesses that make it easy and convenient for employees and customers to arrive by bicycle. These programs ask businesses to implement different strategies to accommodate the needs of customers and employees. Some of these strategies include providing bicycle parking (or being close to publicly available parking),

providing discounts to people biking, supporting and encouraging employees to bike to work, or participating and sponsoring special biking-focused events. The County could help promote these businesses, improve/provide nearby infrastructure, and create a consistent "Sacramento County Bicycle Friendly Business" logo or identity.

## BICYCLE FRIENDLY UNIVERSITY PROGRAM

The League of American Bicyclists' Bicycle Friendly University program recognizes institutions of higher education for promoting and providing a more bikeable campus for students, staff, and visitors. College and university campuses are unique environments that are typically great environments for bicycling. In addition to building bicycle-friendly infrastructure on campus, institutions can incorporate bike share programs, bike co-ops, bike clubs, educational classes, and implement policies and programs that promote bicycling as a preferred means of transportation. The County can partner

with local institutions, such as American River College and Consumnes River College, to help them reach Bicycle Friendly University-related goals.

## BICYCLE FRIENDLY COMMUNITY PROGRAM

The Bicycle Friendly Community (BFC) program acts as a blueprint to guide communities striving to improve bicycling conditions. Within the program, there are ten building blocks that make up the BFC report card. These metrics include statistics on bicycle facilities, bicycle education in schools, jurisdictional spending on bicycling, jurisdictional laws and policies, bike plan status, and others. Based on the results of the report card, jurisdictions are assigned a status: bronze, silver, gold, platinum, and diamond. Formally tracking these metrics, and re-applying to the program at regular intervals, helps communities track their progress improving bicycling facilities, programs, and policies over time. Communities can use this tool to work with SacDOT and other County

# Support Programs

staff to move towards implementing the ATP and other community goals with quantifiable metrics.

## ADOPT-A-TRAIL PROGRAM AND TRAIL CLEAN UP PROGRAMS

The Adopt-A-Trail Program would partner with local groups and associations to clean and maintain trail facilities within Sacramento County. When groups adopt a trail, they agree to organize cleanup efforts to help maintain the trail periodically. A sign or other indication acknowledging the support of the outside organization can be installed along the trail. The County could also provide trash bags and gloves and set up a loaner tools/equipment system to make it easier for more groups to participate.

Trail users can also help keep Sacramento County trails clean by reporting trash and obstacles to the County using 311. The County can also work with local groups to help organize regularly scheduled clean-up days on trails across the County.

## EARN A BIKE/BIKE BUILD PROGRAM

The County could partner with local community-based organizations and advocacy groups to create a program where community members learn and practice bicycle maintenance skills and, over time, earn a bicycle they built or repaired.

## BIKE MATCH PROGRAM

A Bike Match program could match donated bikes in good condition to essential workers or others who need a bicycle for transportation. This program could coordinate pick-up/drop-off directly between the donator and recipient, both of whom sign a liability waiver relieving the sponsoring organization of any responsibility for the bicycle's quality or condition.

## COMMERCIAL CARGO BIKE SUPPORT PROGRAM AND INFRASTRUCTURE

Cargo bikes have shown great promise as an alternative to some truck and van commercial and residential deliveries. Due to limited available curb loading space, delivery vehicles frequently stop in bike lanes and vehicle lanes to load/unload their goods. Cargo bikes can reduce these conflicts and deliver packages more efficiently; on average, they deliver goods faster and with significantly fewer emissions than traditional methods.<sup>12</sup>

To develop a Cargo Bicycle Program, SacDOT would partner with interested logistics/delivery companies to:

- Determine the number of bikes that can be used and the specifications of those bikes (consistent with the CA Vehicle Code)

<sup>12</sup><https://static1.squarespace.com/static/5d30896202a18c0001b49180/t/61091edc3acfa2f4af7d97f/1627987694676/The+Promise+of+Low-Carbon+Freight.pdf>

- Develop policies for where cargo bikes can/cannot unload and create cargo-bike specific hubs (for parking, loading, breaks, etc.) in areas with high demand or loading area constraints
- Decide on appropriate education/training for all cargo bike delivery staff
- Establish enforcement policies and guidelines (working with local law enforcement or DOT staff)
- Create a data-sharing agreement

SacDOT should coordinate improvements to the bicycle network with the creation/future expansions of the cargo bike program to maximize its effectiveness and improve the safety of the workers. Jurisdictions within the United States that are currently piloting cargo bike programs include New York City, Fort Lauderdale, Pittsburgh, Seattle, and Portland.

## BIKEWAY MAPS AND SAFETY INFORMATION

As Sacramento County's bicycle network continues to grow, it will be essential to maintain an up-to-date map of current facilities. This map should be made available online and also in print form (refreshed periodically). Maps can be distributed at bike shops, libraries, and other destinations. Both print and online resources are opportunities to share safety tips and additional topical information.

## BICYCLE REPAIR

Partner with local advocacy groups to offer bicycle repair classes and other resources for the public. Partner with local advocacy groups or bike shops to host pop-up bike repair clinics in locations where there are no bicycle shops nearby. These pop-up events should be targeted in EJ Communities and other disadvantaged areas to help reach the most vulnerable populations.

*A bike being repaired at a pop-up workshop*

# Safe Routes to Schools Programs

(working with local partners and school districts)

## EDUCATION

### Bike Education

Bicycle education ranges from learning to ride to learning the rules of the road and on-bike drills practice during a 'bike rodeo.' These are typically held during PE classes or after school, depending on the arrangement with the school. Typically, bicycle education classes or rodeos are organized by grade level, with an age-appropriate program for elementary, middle, and high school students.

### Pedestrian Education

Pedestrian rodeos teach students, typically 1st and 2nd grade, how to walk safely, including crossing intersections, walking where there is no sidewalk, and being aware of driveways.

*Safe Routes to School-focused bicycle education*

## Transit Education

SacDOT can partner with SacRT to develop a simple education curriculum to teach middle and high school students the basics of reading transit maps and how to use transit throughout Sacramento County. It should also include discussions of any available youth discounts and other fare programs.

Education programs can also encourage student creativity and task them with developing their own educational or promotional-related materials.

## Parent Guardian Education

Including parent/guardian-focused educational activities through Safe Routes to Schools programming increases community safety and can help promote a culture of walking and biking to school. Parent/guardian education can take many forms including flyers, a recurring section in a school newsletter, short videos, sessions during back-to-school night, school events, PTA meetings, and other events or meetings. Topics can include: driving tips, school drop-off/pick-up procedures, preferred walking/biking routes, walking and biking safety tips, and others. This programming should reinforce the educational materials that their students are receiving.

*Students learning how to safely cross the street*

## ENCOURAGEMENT

### Crossing Guards

Crossing guards are critical community assets that help make it safer and more comfortable for students and families to cross the street. Crossing guards are stationed at intersections around schools to help control traffic and improve safety in the area. Crossing guards are typically present around morning drop-off and afternoon dismissal times. A program should work with community members, schools, and school districts to determine appropriate locations and schedules. Crossing guard locations should be regularly evaluated to assign them to areas with the most need.

*A crossing guard helping stopping traffic for students in Santa Clarita*

## Walking School Buses and Bike Trains

Walking School Buses and Bike Trains are organized groups of students walking or biking to school under the supervision of a guardian/adult volunteer. These groups follow predetermined routes and can operate occasionally or daily depending on interest from families. The County can support this program by offering route mapping, promotional support, equipment (i.e., a high-visibility vest for the adult chaperone), and other technical assistance.

*A walking school bus in Alameda County*

Safe Passages Program

Safe Passages programs station adult ambassadors within communities to build relationships with youth and provide them with the tools they need to stay calm and appropriately react to situations they encounter while walking and rolling. Safe Passages programs are typically run using prevention-based approaches, including supervision, community building, and de-escalation. Safe Passages programs generally are intensive programs that include a mentorship aspect between adult ambassadors and youth.

Corner Greeters

A Corner Greeter Program is similar to a Safe Passages Program but is less structured. In a Safe Routes to School context, corner greeters help build community and place additional eyes on the street when kids walk to and from school. Corner greeters can also take on more festive and placemaking roles by setting up pop-up-style events at highly-traveled locations to engage passersby and help build community.

Community groups may sponsor Corner Greeter programs and provide volunteers to help implement events.

Suggested Route Maps

Suggested Walking and Biking Routes to School Maps can help parents overcome traffic-related fears and lack of knowledge of family-friendly routes to school. These maps can show stop signs, traffic signals, crosswalks, paths, crossing guard locations and provide additional safety tips. These maps can also promote park-and-walk and locations, walking school buses, and bike trains.

Adopt-A-Bike

Adopt-A-Bike combines a bicycle donation program with educational components that help teach students how to work on and maintain their new bikes. Adopt-A-Bike can also be structured as “Earn-A-Bike,” where youth learn and practice bicycle maintenance skills and, over time, earn a bicycle they built or repaired.

EVALUATION PROGRAMS

Annual Bike/Ped Counts

Conducting regular walking and bicycle counts is essential to understand how travel behavior is changing across the County. The counting methodology should be consistent with other regional metrics. The County should consider selecting multiple locations across unincorporated County and count those same locations annually. These locations should include a variety of surrounding uses, densities, and contexts. If the County chooses to count the same places, it can consider installing permanent counters.

Before and after project counts are another excellent method to help judge the impacts of active transportation projects and help support future projects.

Student Travel Tallies

Conduct annual travel tallies at participating schools to understand how mode share is changing over time. Consider making this data easily accessible to the public by posting a summary to a central Safe Routes to School website.

Parent Surveys

Parent surveys can provide valuable insights into why students are traveling the way they are. Implement parent surveys once every two or three years to supplement travel tally data and learn additional insights about parents’ concerns and perceptions of walking and bicycling.

Program Evaluation

An annual “active transportation report card” assesses the County’s progress towards Plan goals and objectives and project and program implementation. SacDOT, in coordination with the Sacramento County Bicycle Advisory Committee (SacBAC), should determine specific monitoring metrics. Commonly used metrics include: mode share, climate goals, project implementation/ network stats, and program-related stats. The report card should be presented annually to the SacBAC.

# Infrastructure Programs

## Bike Rack Installation Programs

Bike rack programs coordinate and streamline bike rack installations. This staff-managed program would develop guidelines for installation (only near commercial areas, parks, libraries, etc.) and process requests from residents and businesses. The County can install racks on sidewalks within County right-of-way. The County should establish/refresh bike rack standards and ensure that the racks selected for this program meet strong safety and security thresholds.

## Bike share and Micromobility

Bike share and micromobility (scooters, e-bikes, and other personal mobility devices) are becoming an increasingly important component of the transportation environment. These mobility devices can be personally owned and rented as part of shared mobility systems. Shared micromobility systems can be operated under many different operating models and sizes to fit the specific needs and goals of the County and the community. Implementation of these systems creates additional flexible, lower-cost transportation options within the service area. Powered micromobility devices expand the suite of alternative transportation modes that can reduce automobile dependency. They can be more readily combined with transit and human-powered transportation trips to expand transportation options.

There are six principles that should help guide micromobility systems planning and infrastructure design:

**1) Advance mobility justice:** Bike share and micromobility can provide users with healthy, safe and affordable transportation options that provide access to economic opportunities. Powered mobility devices can further enhance this effect. Micromobility and bike share systems should be implemented to equitably and successfully serve EJ Communities and areas with concentrations of walking and bicycling.

**2) Design for safety:** Designing for safety requires identifying and prioritizing the most vulnerable roadway and trail users first, then accounting for design features that will improve safety for all users.

**3) Complement the natural environment:** Shared-use paths and green infrastructure components can complement the natural environment while preserving the user experience.

**4) Prioritize the human experience:**

Micromobility and bike share specific infrastructure should strive for a consistent user experience across the County. Implementing these items should be done with a “do no harm” approach to incorporating these modes along existing active and shared modes of transportation.

**5) Expand user amenities:** With powered micromobility and other new and emerging modes, public charging infrastructure offers convenience while also reducing risk of “stranded” users or inoperable devices/vehicles that have lost power. Such investments can also provide public charging for motorized wheelchairs or personal phones.

**6) Design for the future:** New mobility and bike share staff should track trends, identify shifts in user groups, and conduct research when possible (surveys, counts, or data from vendors). Understanding these trends can help the County prepare for future investments in these areas.

Micromobility systems should include accessible vehicles within their fleets. The County and system operator should conduct targeted outreach to the appropriate stakeholder groups to better define and plan for their specific needs.

Through this program, the County should also provide dedicated scooter/ bike share parking locations. These locations should be found throughout the service area of the program and should be designed and located to minimize disruptions to other people walking, biking, and rolling.

In addition to micromobility vehicle and program design, the development of successful bike share and micromobility systems is also dependent on construction and maintenance of safe and comfortable travel facilities. Providing low-stress on- and off-street travel facilities will make traveling by bike or scooter more attractive, which

will help convert trips from single occupancy vehicles and improve access to transit services for longer journeys. Comfortable on-street or trail facilities can also reduce instances of users riding on the sidewalk.

The County may consider pursuing a Bike Share or Micromobility Feasibility Study to determine where and how to implement a micromobility program in conjunction with feedback from the community.

Mobility Hubs

Mobility hubs provide an integrated suite of mobility services, amenities, and technologies to enable seamless multi-modal trips. Mobility hubs most often prioritize transit connections, but not all mobility hubs are directly co-located with transit. In practice, mobility hubs develop as a collection of elements that make it easier to access the shared and active mobility network. These elements can be mixed and matched to create a customized, hyper-local transportation terminal. Mobility hubs are typically designed with four primary objectives:

- 1) Increase access and convenience of multiple modes of transportation while reducing single occupancy vehicle trips
- 2) Create a more seamless, desirable experience for transit-linked trips
- 3) Manage private mobility services to align with local goals
- 4) Support other County/ community goals including urban

design improvements, community development, and economic development

Mobility hubs typically include elements from these four areas:

- Transit and trip making services (ticket vending, pick up/drop off areas, transit stops)
- Parking and charging stations for micromobility and shared mobility services (can also include car share and freight/commercial cargo loading/unloading areas)
- Safe, prioritized access for people walking, rolling, or bicycling
- Amenities (community space, retail opportunities, activated furnishing and walking/biking support infrastructure)

Wayfinding

Wayfinding signs provide important destination, distance, and navigation information to roadway users. Specific wayfinding signs designed for people walking and bicycling should be implemented at key locations across the County to support active transportation further.

Tactical Urbanism and Slow Streets/ School Streets

Tactical Urbanism/Demonstration Projects are short-term, temporary installations of infrastructure that allow the jurisdiction and community to “test out” different roadway configurations/ infrastructure treatments before detailed design and permanent construction. Demonstration projects can last anywhere from one day to several months, depending on the project’s objectives and data collection/ observation needs.

These projects are also a great way to add a placemaking element by adding public art, decorative crosswalks, or other community-inspired features.

Slow Streets and School Streets are streets with either limited or closed access to motor vehicle traffic to provide more space and safety for people walking and biking. These streets allow all modes to mix within the roadway area. Slow Streets that front schools can be considered School Streets and designed with school- and student-specific treatments that account for arrival and dismissal travel needs.

### Neighborhood Traffic Management Program

SacDOT's Neighborhood Traffic Management Program (NTMP) strives to improve safety and the quality of life for residents by reducing speeds and reckless driving on neighborhood streets. The NTMP provides a toolbox of solutions that County staff can consider when working with communities to improve neighborhood safety. Improvements are implemented through a five-step process: 1) plan initiation/application, 2) data collection and analysis, 3) funding approval, 4) plan development and support, and 5) implementation. More information on the NTMP can be found on SacDOT's website.

### Quick Build

Some infrastructure components like curb extensions and medians can be implemented faster in the short- to medium-term using quick build strategies and materials. Materials typically include paint, thermoplastic, and bollards/delineators (or other sturdy but removable materials). These improvements share many of the safety benefits as their permanent counterparts. They can be implemented faster and cheaper, allowing the County to be more responsive to safety concerns while still planning for long-term funding and implementation.

# Chapter 6: Implementation and Funding

This chapter describes the process for evaluating and funding project recommendations to help Sacramento County prioritize projects. The County incorporated community feedback and support for projects throughout the prioritization process.

*A cyclist rides on a trail*

# Infrastructure Project Prioritization Methodology

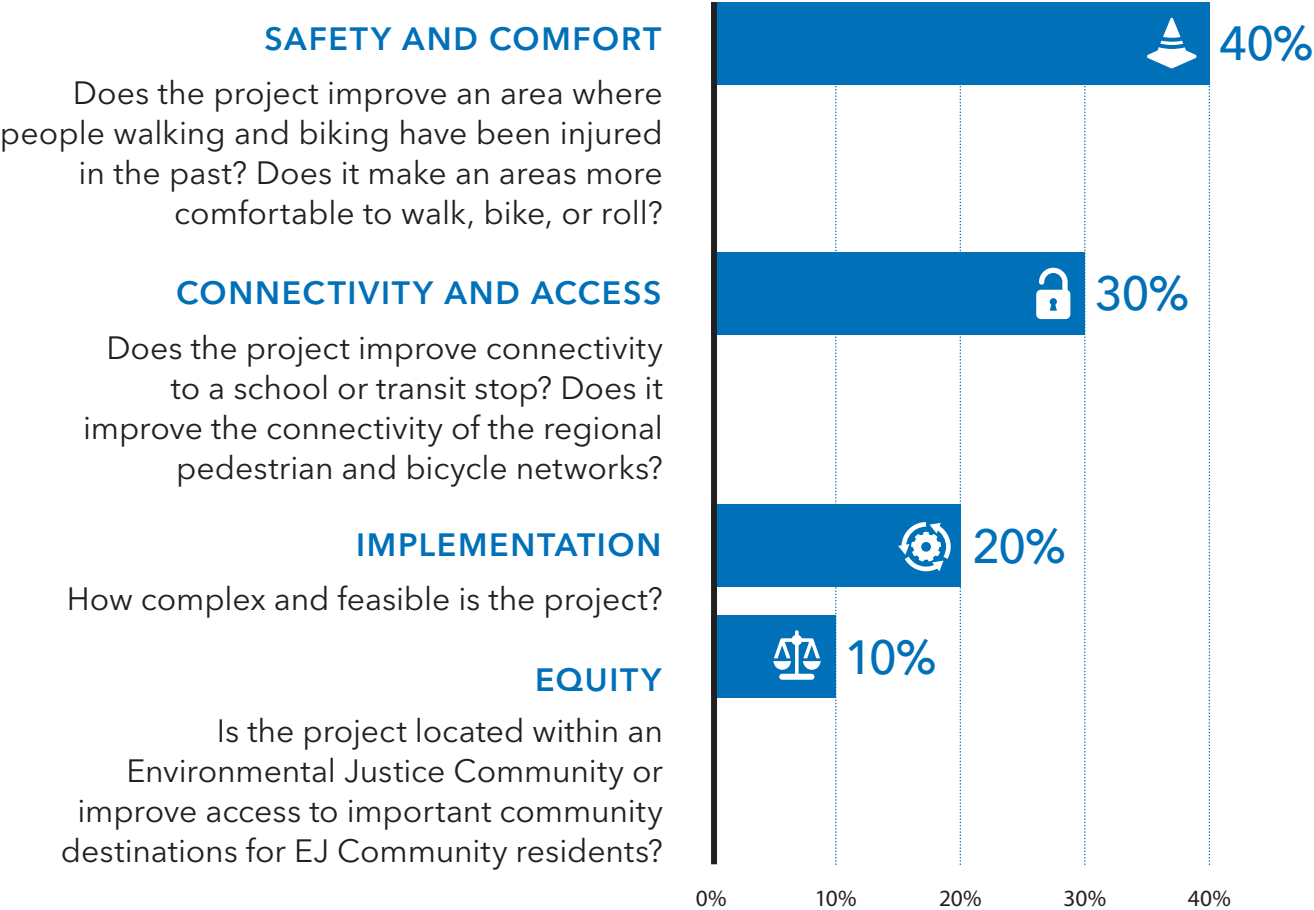

The project prioritization process includes the following steps:

- **Identification of categories:**  
Development of prioritization categories that align with the identified goals for the active transportation plan
- **Weighting of Criteria:**  
Establish the weighting of each prioritization metric
- **Project Scoring and Calibration:**  
Score the projects using the identified metrics and weights. Recalibrate the weighting, if necessary, to ensure project weighting accurately reflects the stated goals

# Prioritization Categories

Prioritization categories respond to a range of local needs. See **Figure 22** below for the categories. Using the defined categories and weights, projects received a score between 0 (low value) and 5 (high value). For full details on the prioritization methodology, please see Appendix D.

Figure 22. Prioritization Methodology Weighting

# Prioritization Results

## PEDESTRIAN PROJECTS

Prioritized pedestrian projects include 66 pedestrian spot improvements and 32 miles of sidewalk gap closures. Priority pedestrian spot improvements scored 3.75 or better of 5 points. Prioritized sidewalk improvements scored 3.5 or better. The Plan also prioritized locations that provide essential connections and access options for Sacramento County residents. Closing these intersection barriers or “gaps” within the network provides important connectivity, access, and trip choice benefits.

All prioritized spot location projects are on either a bicycle or pedestrian high-injury network (HIN) corridor. These projects will provide safety enhancements across the County. These intersection improvements will provide safety enhancements to all roadway users: people walking, biking, rolling, and driving. Many of the spot improvements overlap with priority sidewalk gap locations, providing more

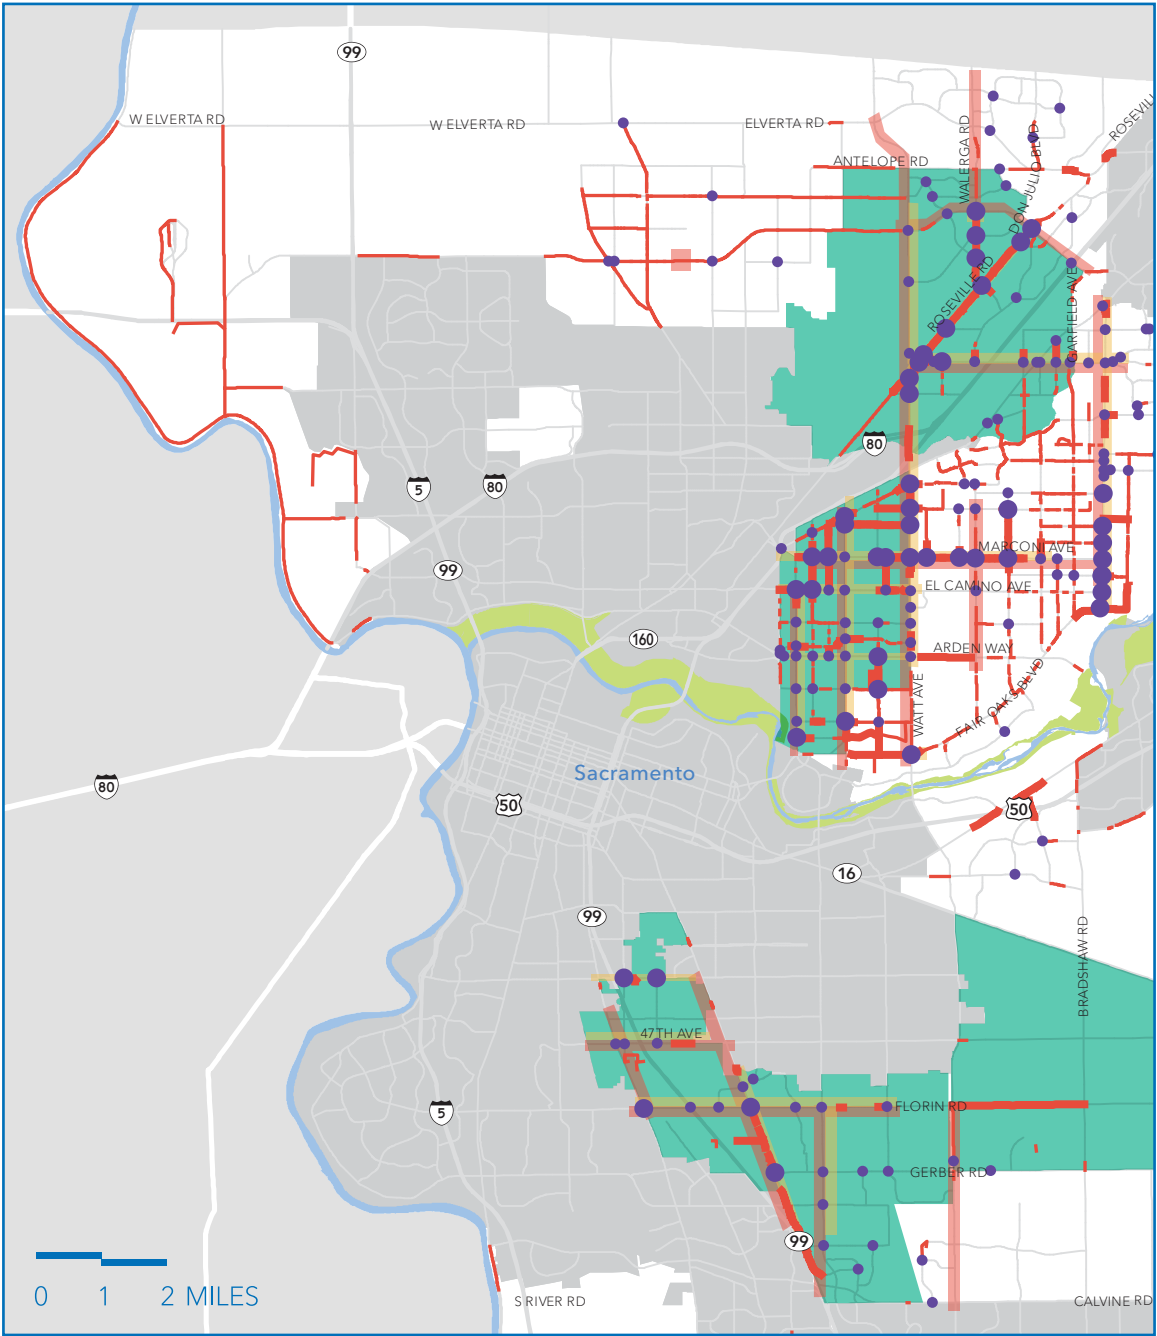

holistic streetscape improvements (and opportunities for project cost savings) for people walking in these areas. Priority sidewalk gap locations are primarily along arterial and collector streets. Building these sidewalks will help fill important gaps in the pedestrian network, improving overall connectivity and access. **Figure 23** displays the prioritized pedestrian and sidewalk gap closure projects. Table D-3 in Appendix D provides prioritization scoring for all pedestrian projects.

BICYCLE PROJECTS

Prioritized bicycle projects represent 190 miles of projects that will enhance safety, improve connectivity, and close critical gaps in the bicycle network, as shown in Appendix D. Study corridors were scored as separated bikeway (Class IV) recommendations. Priority projects received a composite score of 3.75 or higher, or filled a gap in the bicycle network between priority projects and existing bikeways.

Prioritized projects represent recommendations on local, collector, and arterial roads across Sacramento County. Combined, these projects form a connected network of facilities that will close important gaps in the network and help provide continuous access on designated bicycle facilities to essential destinations within neighborhoods and other parts of the County. There are prioritized bicycle projects on most bicycle-HIN corridors. These critical safety improvements can make bicycling to more places more practical for people of varying ages and abilities. Prioritized projects include

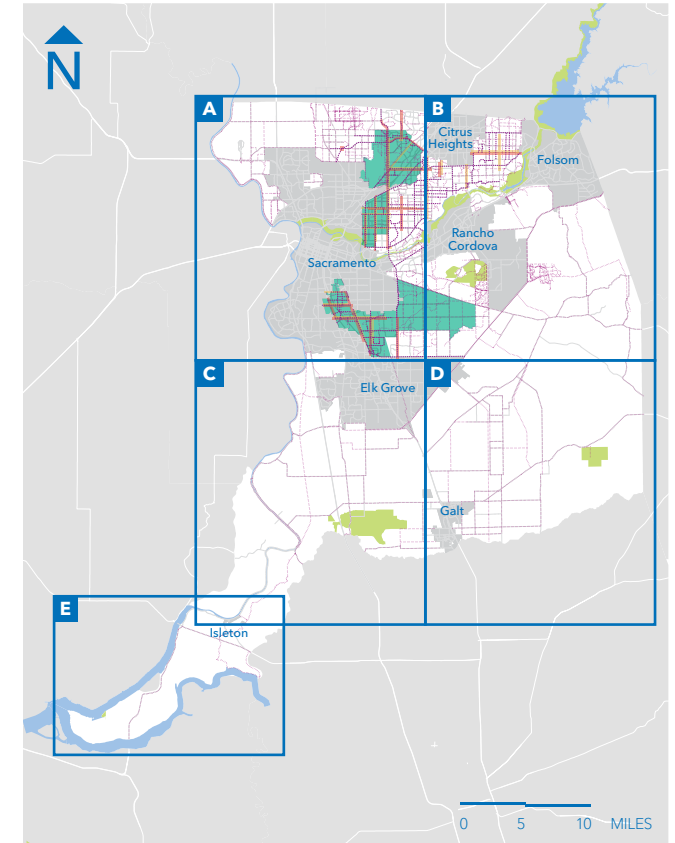

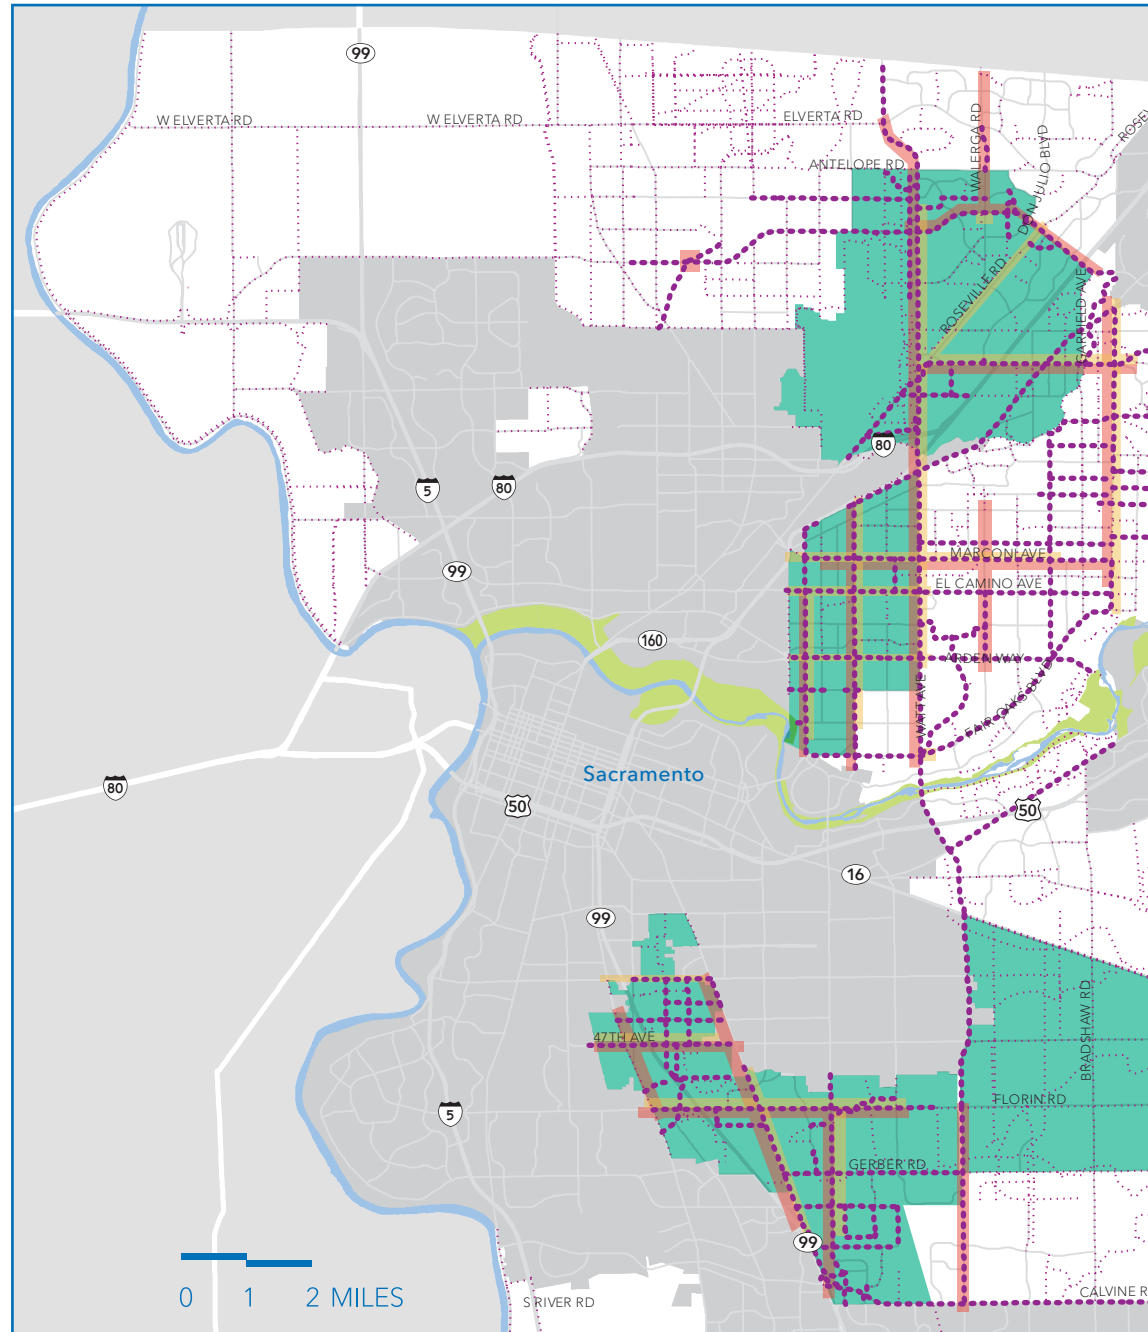

various project types, including trails, bicycle lanes, bicycle boulevards, and corridor studies of varying complexities. A diverse group of prioritized projects allows the County to move forward with bicycle network improvements on multiple fronts. Including study corridors in the analysis also guides the County on which of these more complex projects should be studied first.

**Figure 24** displays the prioritized bicycle projects. Table D-5 in Appendix D provides prioritization scoring for all bicycle projects.

# Project Funding

## Funding Strategy

Identifying and securing funding for programs and infrastructure recommendations is essential to achieving the goals established in this Plan. The following section contains detailed

descriptions of local, regional, state, and federal funding opportunities. **Table 06** below breaks down funding sources by eligible project types (planning, design, constructions, programs, etc.).

Project priority is only one consideration when pursuing grant opportunities. The County considers both the priority and the grant criteria in determining the project or projects to pursue for any grant funding. The County also considers existing or planned projects when determining infrastructure to prioritize.

Table 06. Funding Sources

Funding Source	Planning/ Design/ Construction	On-Street Bikeways & Sidewalks	Trails	Safe Routes to School	Safe Routes to Transit	Crossings/ Intersections	Programs	Studies
Local and Regional Programs

# Funding Sources

This section provides a brief overview of the available local, state, and federal funding streams for active transportation-related projects. The funding opportunities include competitive grants, impact fee/assessment district strategies, and formula-based funding methods.

## LOCAL AND REGIONAL FUNDING

### Sacramento Transportation Authority (STA) Measure A

This funding source is derived from a half-cent sales tax imposed in Sacramento County, administered by STA, and distributed to incorporated cities and unincorporated Sacramento County to fund specific transportation maintenance and projects. Measure A included three ongoing programs: Traffic Safety, Bicycle/Pedestrian Safety, and Maintenance funds. Additionally, there is a capital component to help fund large capital improvement projects identified in the Countywide Transportation Expenditure Plan.

Funds are programmed by STA.

### Sacramento Area Council of Government (SACOG) Regional Program

SACOG’s Regional Program funds cost-effective transportation projects that advance the goals established in SACOG’s Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). These goals include decreasing vehicle miles traveled, increasing the number of bicycle and pedestrian trips, and reducing greenhouse gas emissions, among others. The Regional program will fund projects identified explicitly in the MTP/SCS or lump-sum category projects, such as “Bike/Ped” or “Capacity” projects. The program seeks to promote effective and efficient use of limited state and federal resources to develop and maintain the regional transportation network.

Funds are programmed by SACOG.

### Transportation Development Act (TDA) Article 3

TDA is administered locally by the Sacramento Area Council of Governments (SACOG). This act allocated federal funding toward transit and transportation projects, including bicycle and pedestrian facilities. 2% of the funding allocated to Sacramento County is designated for bicycle and pedestrian projects under the TDA Local Transportation Fund (LTF).

Funds are programmed by SACOG.

**Sustainable Transportation Equity Project (STEP)**

The Sustainable Transportation Equity Project (STEP) is a grant program that will provide safe, environmentally sustainable, accessible, and affordable transportation options to low-income communities and communities of color. STEP applicants can either apply for either a Planning and Capacity Building grant or an Implementation Grant. The Implementation grant program will help fund the construction of new pedestrian, bicycle, and complete streets facilities.

Funds are programmed by the California Air Resources Board (CARB).

**New Development or Redevelopment/Rehabilitation**

Future new development and redevelopment projects including new road construction, resurfacing, and construction projects, are one method of providing pedestrian improvements and bike facilities. To ensure that pedestrian and bicycle improvements are included in these projects, the review process must include an individual (designated active transportation coordinator) or group (bicycle and pedestrian advisory committee) to monitor the process.

Funds are programmed by Sacramento County.

**Assessment Districts**

Different types of assessment districts can be used to fund the construction and maintenance of bikeway facilities. Examples include Mello-Roos Community Facility Districts, Infrastructure Financing Districts (SB 308), Open Space Districts, or Lighting and Landscape Districts. These types of districts have specific requirements relating to the establishment and use of funds.

Funds are programmed by Sacramento County.

Impact Fees

The Sacramento County Transportation Development Fee/Transportation Impact Fee Program (SCTDF/TIF) funds the construction of roadway and transit improvements needed to accommodate traffic and transit ridership generated by new land development allowed by the County General Plan and land use zoning through development impact fees. Assessing such fees is also a condition of receiving Measure “A” Transportation Sales Tax allocations.

The County should ensure that planning policies consider bicycle and pedestrian planning, design, and construction costs to be an eligible use of these fees.

Funds are programmed by Sacramento County.

SACOG Active Transportation Program

SACOG’s Active Transportation Program (ATP) funds infrastructure and programmatic projects that support the program goals of shifting trips to walking and bicycling, reducing greenhouse gas emissions, and improving public health. Competitive application cycles occur every one to two years, typically in the spring or early summer. Eligible projects include the construction of bicycling and walking facilities, safe routes to schools projects, new or expanded programmatic activities, or projects that include a combination of infrastructure and non-infrastructure components. Projects not funded through the state program (described in the next section) are eligible for regional consideration.

Funds are programmed by SACOG.

SACOG Community Design Funding Program

The Community Design Funding Program provides funding to local jurisdictions to build placemaking projects. Projects that implement any of the seven SACOG Blueprint Principles are eligible for funding: 1) housing options 2) transportation options; 3) infill development; 4) mixed land uses; 5) compact development; 6) preservation of natural resources, and 7) quality design .

Funds are programmed by SACOG.

**SACOG Transportation Demand Management (TDM) Program**

SACOG’s TDM Program aims to reduce vehicle trips and vehicle miles traveled using a variety of programs, services, infrastructure projects, travel strategies, and policies to change travel behavior. SACOG periodically offers TDM-focused grant opportunities to fund infrastructure and program projects that work towards TDM program goals. These include traditional grants, mini-grants, and innovations grants.

Funds are programmed by SACOG.

**SACOG Innovative Mobility Program**

The Innovative Mobility Program designs and launches projects and programs that increase transportation options and reduce vehicle miles traveled (VMT) to make options like biking, walking, and taking transit the easy choice for all types of trips. The program has four goals: 1) reduce VMT and vehicle emissions, 2) leverage new technologies and partnerships, 3) increase access to existing transit and micromobility services, 4) inform the Metropolitan Transportation Plan/ Sustainable Communities Strategy (MTP/SCS), and 5) support policies that increase access and benefit underserved communities.

Funds are programmed by SACOG.

**STATE AND FEDERAL FUNDING**

**California Active Transportation Program**

California’s Active Transportation Program (ATP) funds infrastructure and programmatic projects that support the program goals of shifting trips to walking and bicycling, reducing greenhouse gas emissions, and improving public health. Competitive application cycles occur every one to two years, typically in the spring or early summer. Eligible projects include the construction of bicycling and walking facilities, safe routes to schools projects, new or expanded programmatic activities, or projects that include a combination of infrastructure and non-infrastructure components. Typically, no local match is required for statewide funding, though extra points are awarded to applicants who identify matching funds.

Funds are programmed by the California Transportation Commission (CTC).

**Sustainable Transportation Planning Grants**

Caltrans Sustainable Transportation Planning Grants are available to communities for planning, study, and design work to identify and evaluate projects, including conducting outreach or implementing pilot projects. Communities are typically required to provide an 11.47 percent local match, but staff time or in-kind donations are eligible to be used for the match provided the required documentation is submitted.

Funds are programmed by Caltrans.

**Highway Safety Improvement Program**

Caltrans offers Highway Safety Improvement Program (HSIP) grants every one to two years. Projects on any publicly owned road or active transportation facility are eligible, including bicycle and pedestrian improvements. HSIP focuses on projects that explicitly address documented safety challenges through proven countermeasures, are implementation-ready, and demonstrate cost-effectiveness.

Funds are programmed by Caltrans.

**Solutions for Congested Corridors Program**

Funded by SB1, the Congested Corridors Program strives to reduce congestion in highly-traveled and congested roads through performance improvements that balance transportation improvements, community impacts, and environmental benefits. This program can fund a wide array of enhancements, including bicycle facilities and pedestrian facilities. Eligible projects must be detailed in an approved corridor-focused planning document. These projects must include aspects that benefit all modes of transportation using an array of strategies that can change travel behavior, dedicate right of way for bikes and transit, and reduce vehicle miles traveled.

Funds are programmed by the CTC.

**Office of Traffic Safety**

Under the Fixing America’s Surface Transportation (FAST) Act, five percent of Section 405 funds address non-motorized safety. These funds may be used for law enforcement training related to pedestrian and bicycle safety, enforcement campaigns, and public education and awareness campaigns.

Funds are programmed by the California Office of Traffic Safety.

**Recreational Trails Program**

The Recreational Trails Program helps provide recreational trails for both motorized and non-motorized trail use. Eligible products include trail maintenance and restoration, trailside and trailhead facilities, equipment for maintenance, new trail construction, and more.

Funds are programmed by the California Department of Parks and Recreation.

**Affordable Housing and Sustainable Communities Program**

The Affordable Housing and Sustainable Communities Program (AHSC) funds land-use, housing, transportation, and land preservation projects that support infill and compact development that reduces greenhouse gas (GHG) emissions. Projects must fall within three project area types: transit-oriented development, integrated connectivity project, or rural innovation project areas. Fundable activities include affordable housing developments, sustainable transportation infrastructure, transportation-related amenities, and program costs.

Funds are programmed by the Strategic Growth Council and implemented by the Department of Housing and Community Development.

Urban Greening Grants

Urban Greening Grants support the development of green infrastructure projects that reduce GHG emissions and provide multiple benefits. Projects must include one of three criteria, most relevantly: reduce commute vehicle miles traveled by constructing bicycle paths, bicycle lanes, or pedestrian facilities that provide safe routes for travel between residences, workplaces, commercial centers, and schools. Eligible projects include green streets and alleyways and non-motorized urban trails that provide safe routes for travel between homes, workplaces, commercial centers, and schools.

Funds are programmed by the California Natural Resources Agency.

Habitat Conservation Fund

The Habitat Conservation Fund Program supports projects that bring urban residents into park and wildlife areas, protect plant and animal species, and acquire and develop wildlife corridors and trails.

Funds are programmed by the California Department of Parks and Recreation.

Statewide Park Program (SPP)

The Statewide Park Program solicits competitive grants to fund new parks and recreation opportunities in critically underserved communities across California. Funds can be used to create and expand/renovate existing parks. All projects must include at least one “recreation feature,” which includes non-motorized trails. No match is required.

Funds are programmed by the California Department of Parks and Recreation.

### Trade Corridor Enhancement Program (TCEP)

The Trade Corridor Enhancement Program provides funding for infrastructure improvements on federally designated Trade Corridors of National and Regional Significance. TCEP can fund a variety of project types as long as the project has direct nexus to improving freight system's economic activity or vitality, improves safety, improves connectivity, and reduces community impacts.

Funds are programmed by California Transportation Commission.

### USHUD Community Development Block Grant Program

The Community Development Block Grant (CDBG) Program provides annual grants on a formula basis to states, cities, and counties to develop healthy and sustainable urban communities by providing housing and a suitable living environment, and by expanding economic opportunities, principally for low- and moderate-income persons. CDBG can fund new infrastructure (sidewalks and roadways) and significant roadway changes (i.e., a project that could be completed with sealing would not be eligible, but a project that included a new asphalt overlay would be eligible for funding). Roadway projects included as part of larger community development projects (housing, community centers, etc.) would improve scoring.

Funds are programmed by the U.S. Department of Housing and Urban Development

# Cost Estimates

**Table 07** provides planning-level construction cost estimates for many pedestrian infrastructure treatments. Detailed engineering design work will be necessary to determine the specific costs of individual projects. Table D-1 in Appendix D provides construction cost estimates for recommended pedestrian projects. Table D-2 provides cost estimates for recommended sidewalk projects.

Table 07. Pedestrian Facility Construction Costs (2021 dollars)

	Unit	Cost (with soft costs*)	Assumptions
Sidewalk (6 foot)	LF	\$280	Includes curb and gutter
Sidewalk (10 foot)	LF	\$340	Includes curb and gutter
Remove slip lane	EA	\$31,000	Replace existing ramp and square up corner
Advance stop pavement markings	EA	\$1,085	Install STOP marking
Advance yield pavement markings		\$545	Install yield shark teeth marking
Roadway lane striping	LF	\$5	Restripe one lane per linear foot
Crosswalks	EA	\$7,750	High-visibility crosswalk
Traffic signal	EA	\$465,000	Full traffic signal
Pedestrian hybrid beacon (PHB)	EA	\$232,5000	PHB signal on two mast arms
Curb ramp	EA	\$8,525	One corner
Curb extensions (2 corners)	EA	\$31,000	Two corners
Rectangular Rapid Flashing Beacon (RRFB)	EA	\$38,750	RRFBs at two approaches
Median island (singular)	EA	\$12,400	4x10 ft concrete median at one crosswalk
Median island (SF)	SF	\$25	Concrete median
No right turn on red (sign and phasing)	EA	\$9,300	Install blank out sign, update signal phasing
Update signal timing	EA	\$6,200	Update signal phasing/timing
Asphalt pavement	SF	\$15	Formalize dirt path with asphalt pavement

\*Soft costs include the following: 10% mobilization, 15% traffic control, 10% utility coordination, and 20% contingency)

**Table 08** provides planning-level cost estimates for each class of bicycle facility. These are planning-level cost estimates; additional detailed engineering design work will be necessary to determine specific costs of individual projects. Table D-3 in Appendix D provides cost estimates for recommended bicycle projects.

*Table 08.* Bicycle Facility Construction Costs (2021 dollars)

	Costs per mile (with soft costs*)	Assumptions
Shared-Use Path	\$1,636,800	10-foot-wide multi-use path with decomposed granite shoulders
Bicycle Lane	\$132,000	Two sides of the street
Buffered Bicycle Lane	\$158,400	2 ft buffer
Bicycle Boulevard	\$290,400	Traffic calming and intersection improvements
Separated Bikeway	\$2,059,200	\$1,848,000 for one-way facilities, \$2,217,600 for bi-directional facilities

*\*Soft costs include the following: 10% mobilization, 15% traffic control, 10% utility coordination, and 20% contingency)*

# Maintenance

Proper maintenance of bicycle facilities, shared used paths, and sidewalks are essential for safe and comfortable use. Inadequately maintained facilities can create hazardous conditions and reduce the accessibility and connectivity of the bicycle and pedestrian networks. Providing safe, accessible, comfortable, and well-maintained walking, bicycling, and rolling facilities allows these modes to serve as viable travel options. The following section provides specific maintenance policies that the County should implement.

## MAINTENANCE POLICIES

The County should implement the following policies to expand and improve its active transportation networks while keeping them in a state of good repair, high usability, and accessibility.

- **Policy 1:** Identify all necessary maintenance stakeholders across Sacramento County departments and partner agencies/jurisdictions
  - Implementation Measures:
    - » Regularly coordinate to establish/update maintenance needs across the County and share resources when possible and practical
    - » Establish a facility inspection schedule to inspect facilities and update maintenance priorities at regular intervals
- **Policy 2:** Maintain designated walking and bicycling facilities to be safe, comfortable, accessible, and usable to walking, bicycling, and rolling
  - Implementation Measures:
    - » Sweep streets regularly with priority given to roads with higher pedestrian and bicycle traffic
      - Ensure the DOT has all necessary equipment to maintain all facility types, including trails and separated bikeways
      - Develop a schedule to sweep separated bikeways regularly
    - » Trim overhanging and encroaching vegetation (or work with appropriate property owners) to maintain a clear path of travel along pedestrian and bicycle facilities

- » Develop and implement an appropriate minimum paving surface standard for bicycle boulevards and other low-stress bikeways that maintain a higher safety and comfort level for active transportation users
- » Update DOT repaving project selection methodology to prioritize bicycle boulevards and other low-stress bikeways to ensure that the minimum paving surface standard is maintained
- » Consider prioritizing sidewalk repairs in front of qualifying residential properties based on pedestrian volumes and proximity to important community destinations like parks, schools, and libraries
- » Continue working with commercial property owners to repair any damaged sidewalks in front of those properties promptly
- » Incorporate maintenance needs into the design of separated bikeways to ensure proper maintenance after construction
- » Develop a construction mitigation policy for impacted pedestrian and bicycle facilities requiring County staff and contractors to create fully accessible detours of equivalent standards, where possible, when construction, maintenance, or other activities restrict the use of bikeways and walkways
- **Policy 3:** Maintain bicycle parking and other support facilities for a more comprehensive bicycle network
  - o Implementation Measures:
    - » Develop a procedure for inspection and prompt repair/ replacement of damaged bicycle racks or other facilities in public right-of-way
    - » Encourage public event organizers to provide and publicize valet bicycle parking at special events. Amend the Sacramento County event permitting process to include bicycle access accommodations and parking as part of necessary traffic control provisions

- **Policy 4:** Develop a communications protocol for facility closures/detours and network updates

- o Implementation Measures:

- » Maintain a bikeway and sidewalk status page on the DOT website. Provide notices and information on planned closures and detours
- » Regularly update digital and print bicycle and trail network maps. Distribute paper maps at libraries, community centers, community events, bike shops, and other locations
- » Promote Sacramento County's 311 service as an easy-to-use method for the public to report maintenance and other facility issues. 311 can also potentially be used to provide suggestions on new walking or bicycling facilities to Sacramento County DOT staff

In addition to infrastructure maintenance, it is also crucial for the County to regularly update and maintain its Geographic Information Systems (GIS) database of projects. The County should follow the GIS update procedures listed in Appendix E.

MAINTENANCE COSTS

Forecasting the maintenance costs of bicycle facilities is an integral part of annual budgeting processes. **Table 09** provides planning-level maintenance costs for bicycle facilities broken down by facility type.

Table 09. Annual Maintenance Costs

Facility Type	Cost per mile per year	Miles per year	Total Annual Cost	Notes
Class I Shared Use Paths	\$8,500	349.1	\$2,967,350	Lighting, debris cleanup, and removal of vegetation overgrowth, patching pavement, adding decomposed granite to shoulders
Class II Bicycle Lanes and Class IIB Buffered Bicycle Lanes	\$1,500	632.9	\$949,350	Repainting the lane strips and stencils, sign replacement as needed
Class III Bicycle Route/ Boulevards	\$1,000	54.2	\$54,200	Sign and shared-lane stencil replacement as needed
Class IV Separated Bikeways	\$4,000	145.6	\$582,400	Debris removal, repainting stripes and stencils, sign replacement, replaced damaged barriers

## Interagency Coordination

Some of the infrastructure recommendations in this Plan are in the rights-of-way of agencies other than Sacramento County, such as Caltrans. The County will have to coordinate with the appropriate stakeholder(s) for planning, design, funding, and implementation. These partner agencies may have the final approval on these projects, even if they are located within unincorporated Sacramento County.

Partnerships with community-based organizations and other walking and biking focuses groups will be vital for expanding active transportation programming across Sacramento County. These partners can not only help provide the programming but can also help promote them within the communities they serve.

## Quick Build Projects

Many infrastructure improvements (especially pedestrian projects and intersection geometry changes) can be completed using signage, striping, and other quick-build strategies (e.g., paint-and-post and other temporary materials). These improvements can be left permanently or built temporarily until additional funding for design and construction can be secured for permanent, more expensive design iterations.

# Introduction

## COMMUNITY CONTEXT

Sacramento County is located in the middle of the 400-mile long Central Valley, 87 miles east of San Francisco and 100 miles west of Lake Tahoe. Sacramento County has seven incorporated cities: Sacramento, Elk Grove, Citrus Heights, Folsom, Galt, Isleton, and Rancho Cordova. Three of the cities were only recently incorporated, including Citrus Heights (1997), Elk Grove (2000), and Rancho Cordova (2003). Encompassing a total of 994 square miles, the county surrounds Interstate 80 (I-80) and US Route 50 (US 50) east of Yolo County and Interstate 5 (I-5) and State Route 99 (SR 99) north of San Joaquin County and east of Solano County. Sacramento County shares borders with Sutter County and Placer County to the north and El Dorado County to the East.

The unincorporated County is well developed and densely populated along the I-80 and US 50 corridors and the northern portion of the SR 99 corridor while the remainder of the unincorporated County is more sparsely populated with land either devoted to farming or undeveloped.

The United States Census 2018 American Community Survey (ACS) estimates a population of 584,127 for unincorporated Sacramento County, approximately 40% of the total population of Sacramento County. The unincorporated population has grown 5.3% since the 2010 census population count and the median age for the entire county has increased from 34.8 to 36.6 over the last 10 years.

## TRANSPORTATION OVERVIEW

Based on the 2018 ACS<sup>13</sup>, there are approximately 270,000 workers 16 years or older in unincorporated Sacramento County. The majority of workers commute by car, either alone (81.3%) or carpooling (7.4%) while fewer than a percent each commute by walking (0.9%) or bicycle (0.4%). These are significantly lower than the 2012 SACOG regional averages<sup>14</sup> of 2.1% commute mode share for walking and 1.8% commute mode share for biking. The average time to commute to work or unincorporated

Sacramento County workers is 27.8 minutes.

The 2016 SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy document states that:

“Data on non-commute bike and walk trips is difficult to assemble for the region—estimates are dependent on relatively small sample surveys, model estimates, and anecdotal data. The table shows a significant increase in all-purpose bike and walk share, from about 7.3 to 9.1 percent. It is reasonable to assume that the recent trend in all-purpose biking and walking has been upward, given that commuting shares have increased.”

It also provides estimates for all travel for the entire SACOG region of 1.9% of trips are people bicycling and 7.2% of trips are people walking. Given that the commuting mode split for unincorporated Sacramento County is two to four times lower than the regional averages, it is reasonable to assume that the mode split is similarly lower across all trips.

<sup>13</sup>Based on the total workers in Sacramento County minus the workers in each incorporated City.

<sup>14</sup>2016 SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy

# Multimodal Connections to Transit

Currently Sacramento Regional Transit (SacRT) buses and light rail run through the communities, with a total annual ridership of about 21 million passengers in FY 2019. The light rail saw a weekday average ridership of 40,000, while average weekday bus ridership was 37,000 passengers per day. The majority of light rail routes run within the City of Sacramento; however, the Gold Line runs along Folsom Boulevard between Sacramento and Folsom. Three of the stations within unincorporated Sacramento County have Park & Ride lots that connect that act as a connection between the light rail, bus routes, and surrounding communities.

- **Watt/Manlove Station** has stops for SacRT Bus Routes 72, 84. It also connects to a Class I multiuse trail that provides protected crossing for US 50 and the American River, eventually connecting to regional trails that parallel the river. The station however has no secure bike parking and minimal racks.
- **Butterfield Station** has stops for SacRT Bus Routes 19, 78. It also connects to Class II facilities on Mayhew Road which provides crossing for US 50 and connection to residential communities to the South. There is also an existing facility to the north along a canal connecting to the American River which is blocked by locked gates. The station however has no secure bike parking and minimal racks.
- **Hazel Station**, located between Rancho Cordova and Folsom, is a Park and Ride that also acts as a bus terminal but does not serve any bus routes. The station isn't connected to any nearby communities or bicycle facilities.
- **Starfire Station**, located off of Folsom Boulevard in the Rosemont community, is served by the Gold Line and the 84 bus route. The station has no secure bike parking and minimal racks. There are bike lanes on Folsom Boulevard.

- **Tiber Station**, located off Folsom Boulevard in La Riviera, is served by the Gold Line but no bus stops. The station has no secure bike parking and minimal racks. There are bike lanes on Folsom Boulevard.

There are also five Caltrans park & ride locations in Sacramento County, one of which is located in unincorporated Orangevale at the US 50 interchange with Hazel Avenue. The **Hazel Avenue Park and Ride** has no transit access and is located adjacent to the Jedediah Smith Memorial Trail.

# Vehicle Share Programs

The bike share company JUMP launched an all-electric assist bike share system in the city of Sacramento as well as the Yolo County cities of Davis and West Sacramento, with an initial offering of 300 bikes and a planned expansion of 900 bikes during summer 2018, however none of the hubs are located in unincorporated Sacramento County or Sacramento County cities east of Sacramento. There are also recreational bike share programs run by Tower Bridge Bike Share and Practical Cycle, however they are both contained within the City of Sacramento in Sacramento County.

There was a short-lived State Employee BikeShare program available to the 230,000 workers employed by the State running in the Sacramento region, however there is no longer any information available about the program and it is assumed defunct.

The tech firm Gotcha was planning to provide bike- and scooter-share programs and equipment for Elk Grove,

Folsom, and Rancho Cordova in Fall 2019, however the program was delayed due to increasing tariffs. While originally planned for a delayed rollout during Spring 2020 these programs may have been further delayed by the COVID-19 pandemic<sup>15</sup>.

There are no bike- or scooter- share programs in unincorporated County locations, however as of May 2017, the Sacramento Air Quality Management District (AQMD) has administered the Our Community CarShare Sacramento Program<sup>16</sup>, which is available to low-income Sacramento County residents and operates in currently operates in seven lower-income.

Active transportation is enjoyed by people of all ages and abilities. However, the perception of safety, lack of facilities or effective routes, or natural constraints such as heat and the presence of hilled terrain can

contribute to a person's unwillingness to walk or ride a bike. As such, users of all capabilities need to be considered when developing or expanding the active transportation network. Outside of improving the network, support through education and encouragement programs can be utilized to improve confidence in the system and increase facility use.

<sup>15</sup> <https://www.sacbee.com/news/local/article233636962.html> (referenced July 2020)

<sup>16</sup> <https://sacbreathe.org/what-we-do/air-quality/electric-vehicle-car-share/> (referenced July 2020)

# Active Transportation Supporting Policies

Current active transportation supporting policies, documentation, and plans have been reviewed. Each document differs in overarching focus and approach related to the most relevant active transportation needs in the area, however general commonalities are present. Policies, goals, and actions most commonly identified in these documents generally relate to the following:

- Invest in bicycle and pedestrian infrastructure as healthy transportation options
- Improve safety for cyclists and pedestrians
- Increase and improve access to employment, economic centers, and environmental justice communities
- Establish and expand education, encouragement, enforcement, and evaluation programs
- Collaboration with nearby jurisdictions to support a regional bicycle network

- Prioritize projects that improve access to environmental justice communities, improve safety, close gaps in the network, or are low cost or privately funded improvements

Some of the specific sources of policies and programs that will shape active transportation in Sacramento County include:

- Federal Highway Administrative (FHWA)
- American Association of State Highway and Transportation Officials (AASHTO)
- Americans with Disabilities Act (ADA)
- Federal and California State Manual on Uniform Traffic Control Devices (MUTCD)
- The State of California
- Sacramento Area Council of Governments (SACOG)

Sacramento County has many desirable characteristics to support active transportation. While temperatures rise above what might be desirable at times during the summer, the warm and dry climate of the region encourages people to walk and ride bicycles throughout the year. Most of the land in the County is generally flat, which provides an environment for those who are less confident and less able to more easily travel longer distances without tiring. The larger cities in the County are often divided by stretches with little development. This is both a constraint and an opportunity in that while regional trails longer than a few miles may be more daunting for pedestrians and less skilled or able bicycle riders, longer trails may provide sought after routes for avid cyclists and users seeking exercise.

There are currently 280 miles of existing bicycle infrastructure in the Unincorporated Region consisting of 61 miles of Class I, 209 miles of Class II and 11 miles of Class III bike lanes. The total existing sidewalks add up to 1,950 miles. A total of 1,077 miles of bikeways were proposed in the previous plan, of which six miles of Class II bike lanes have been built: four miles along Garfield Avenue from Fair Oaks Boulevard to Greenback Lane, and two miles along California Avenue from Oak Avenue to Jan Drive. Existing and proposed bicycle infrastructure is shown in Figure A-1 and Figure A-2.

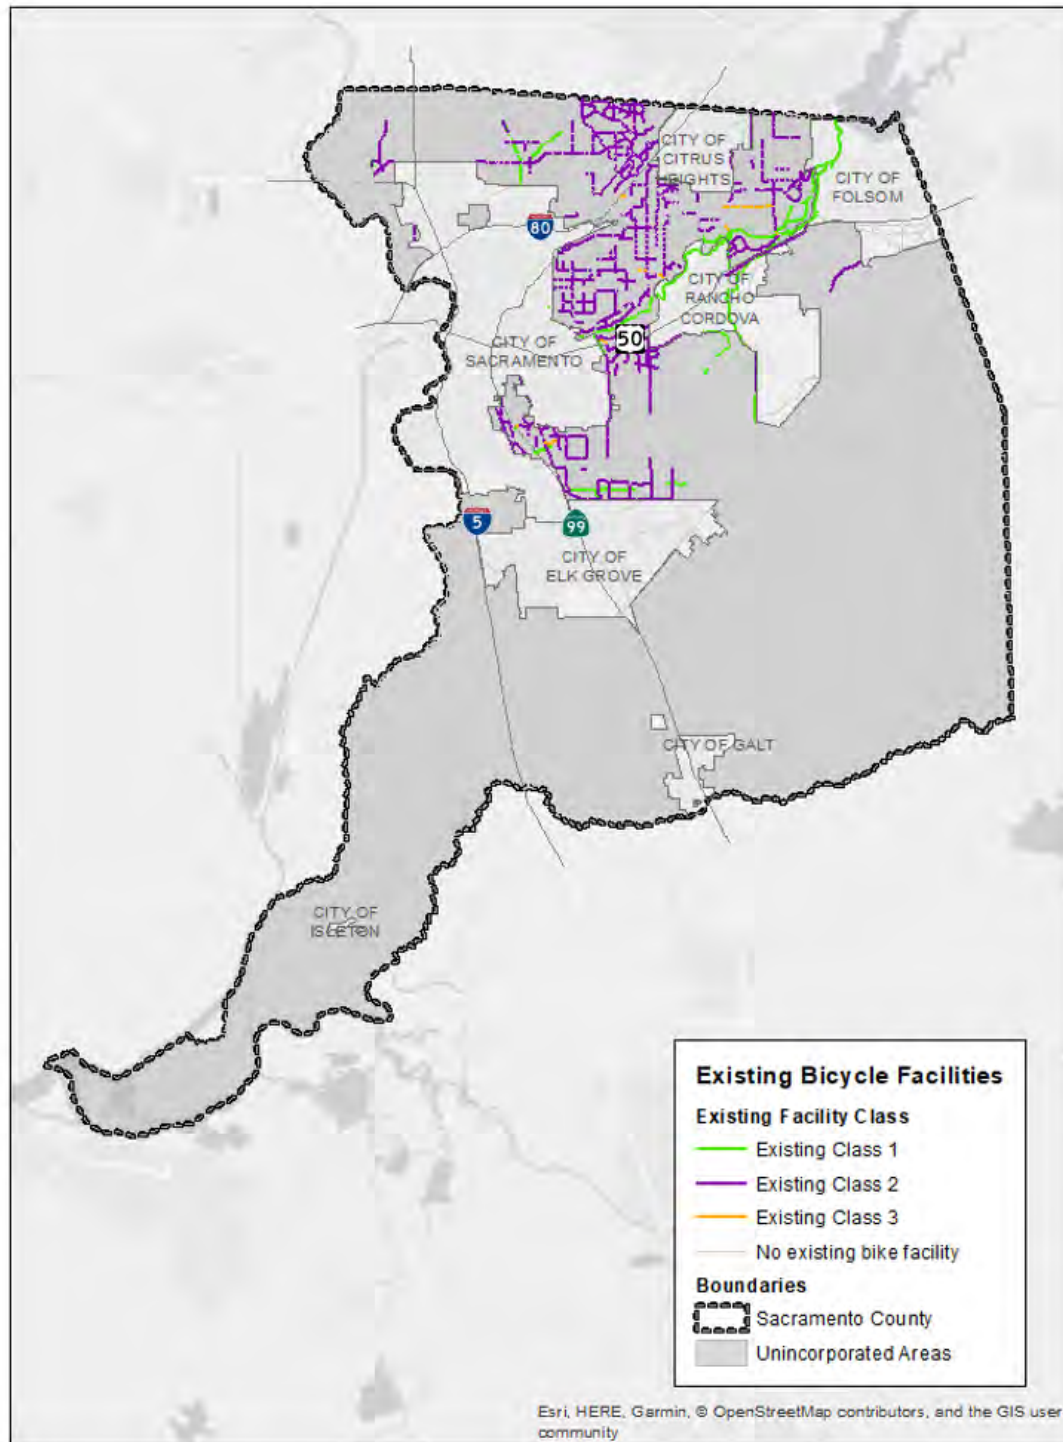

The following funding opportunities have been identified as potential sources for the active transportation plan<sup>17</sup>:

- Cap and Trade – Affordable Housing Sustainable Communities
- Office of Traffic Safety – Bicycle and Pedestrian Safety Grants
- Federal Lands Access Program – CA
- SACOG Regional Funding Programs
- State Active Transportation Program Cycle 5
- Regional Active Transportation Program Cycle 5

- Caltrans Sustainable Communities Planning Grants
- Trails and Greenways
- Blue Sky Grant Program

<sup>17</sup>[https://www.sacog.org/sites/main/files/file-attachments/b-p\\_funding\\_opps\\_att\\_8.pdf?1566419865](https://www.sacog.org/sites/main/files/file-attachments/b-p_funding_opps_att_8.pdf?1566419865)

Figure A-1. Existing Bicycle Facilities

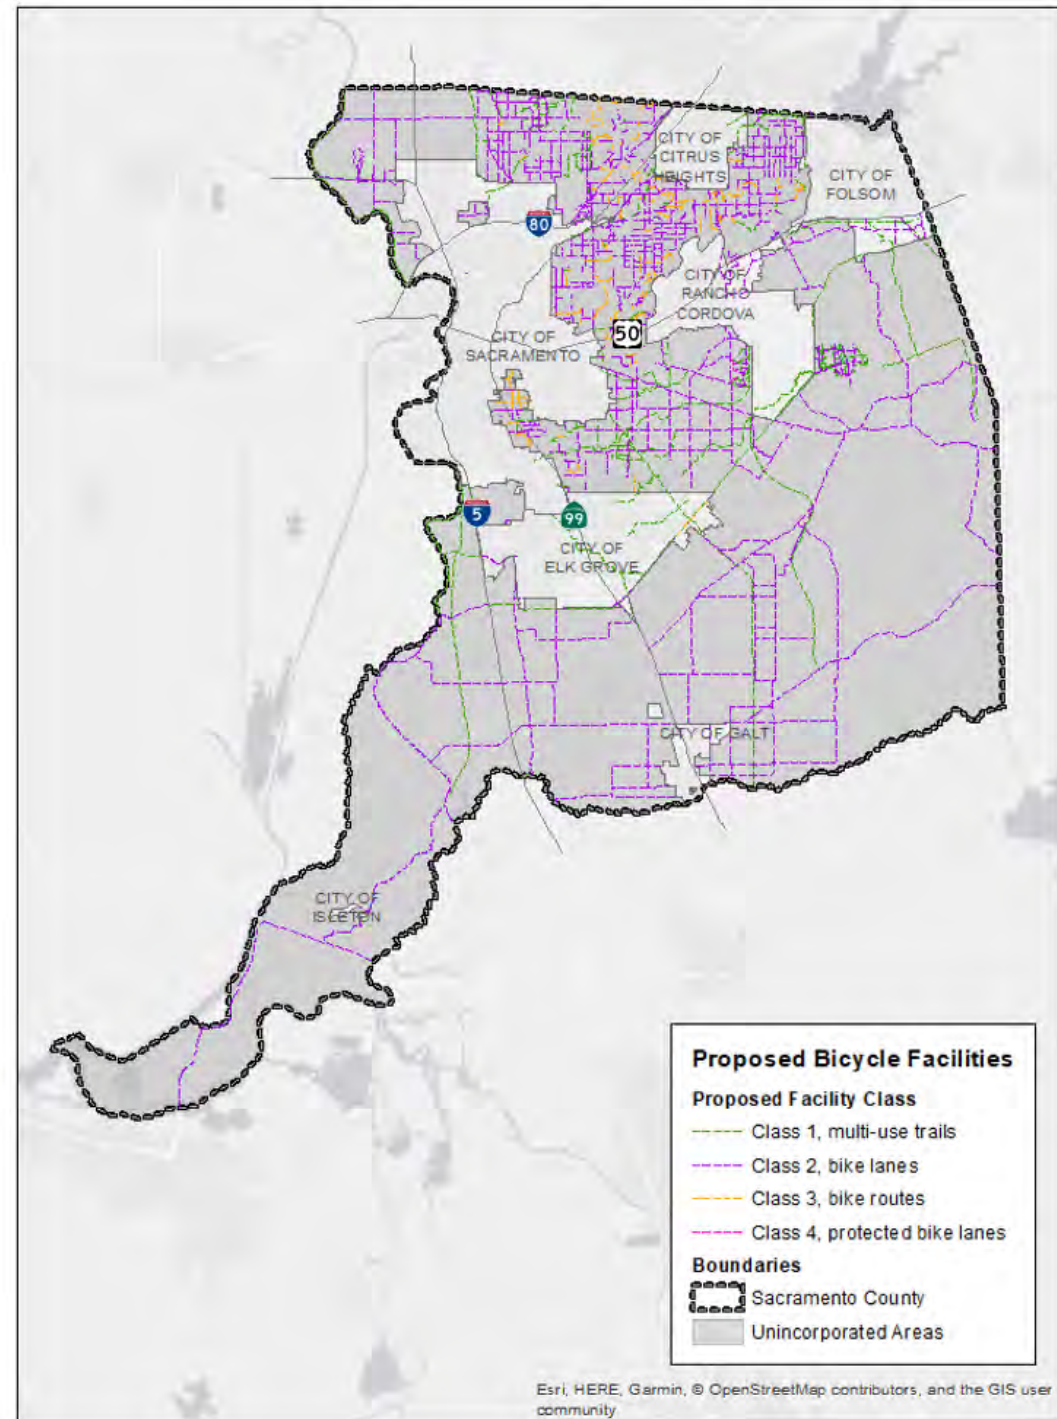

## SUMMARY

Active transportation in rural settings is also an area of weakness in active transportation plans in the region. The low density in the southern portion of the county creates a network void of connected facilities and requires long distances to travel to reach destinations. As a result, the pedestrian mode share is far lower than suburban areas. The bicycle mode share also suffers as most facilities that do exist are located on high speed, narrow roadways. While improvements to the pedestrian network may not prove fruitful, this situation does provide the opportunity to improve and expand the bicycle network.

Figure A-2. Proposed Bicycle Facilities

There are ample opportunities in suburban areas of the County to improve connectivity. Both pedestrian and bicycle networks can be expanded to ensure gapless connections to transit routes and to create desirable routes to key destinations within walking distances. Active transportation in the County would be made further desirable by offering support facilities such as water fountains for pedestrians and dedicated bicycle parking facilities for bicyclists at key destinations.

# Demand: Where do people want to go?

## SACRAMENTO COUNTY COMMUNITIES

The Sacramento County Planning department has defined community boundaries throughout the County<sup>18</sup> as shown in Figure A-3. The highest density communities include Arden Arcade, Carmichael, Fair Oaks, Orangevale, Rio Linda/Elverta, South Sacramento, and Vineyard. The Sacramento County Environmental Justice Element also identifies communities that are considered disadvantaged compared to other parts of unincorporated County based on California Communities Environmental Health Screening Tool (CalEnviroScreen), which identified communities based on socioeconomic and environmental characteristics, and the Sacramento Area Council of Governments (SACOG) Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). The four Environmental Justice communities

identified include North Highlands/Foothill Farms, West Arden-Arcade, South Sacramento, and North Vineyard and are shown in Figure A-4.

Most people that walk or bike to work in Sacramento County are concentrated within the incorporated cities. The American River/US 50 corridor provides multiple ways to travel with trails, and transit providing alternatives to the Freeway and a dense grid of pedestrian and bicycle facilities for travel within communities. This is apparent with the highest commute mode split for walking occurring in Folsom (3.0%), City of Sacramento (2.9%), and Rancho Cordova (1.7%) while the other cities and unincorporated County show less than a percent of commute mode share for walking. Bicycle use for commuting is even more concentrated in the City of Sacramento (2.0%) while all other cities and unincorporated County show less than a percent of commute mode share for biking. This comes from a lower density of facilities and more gaps in the network.

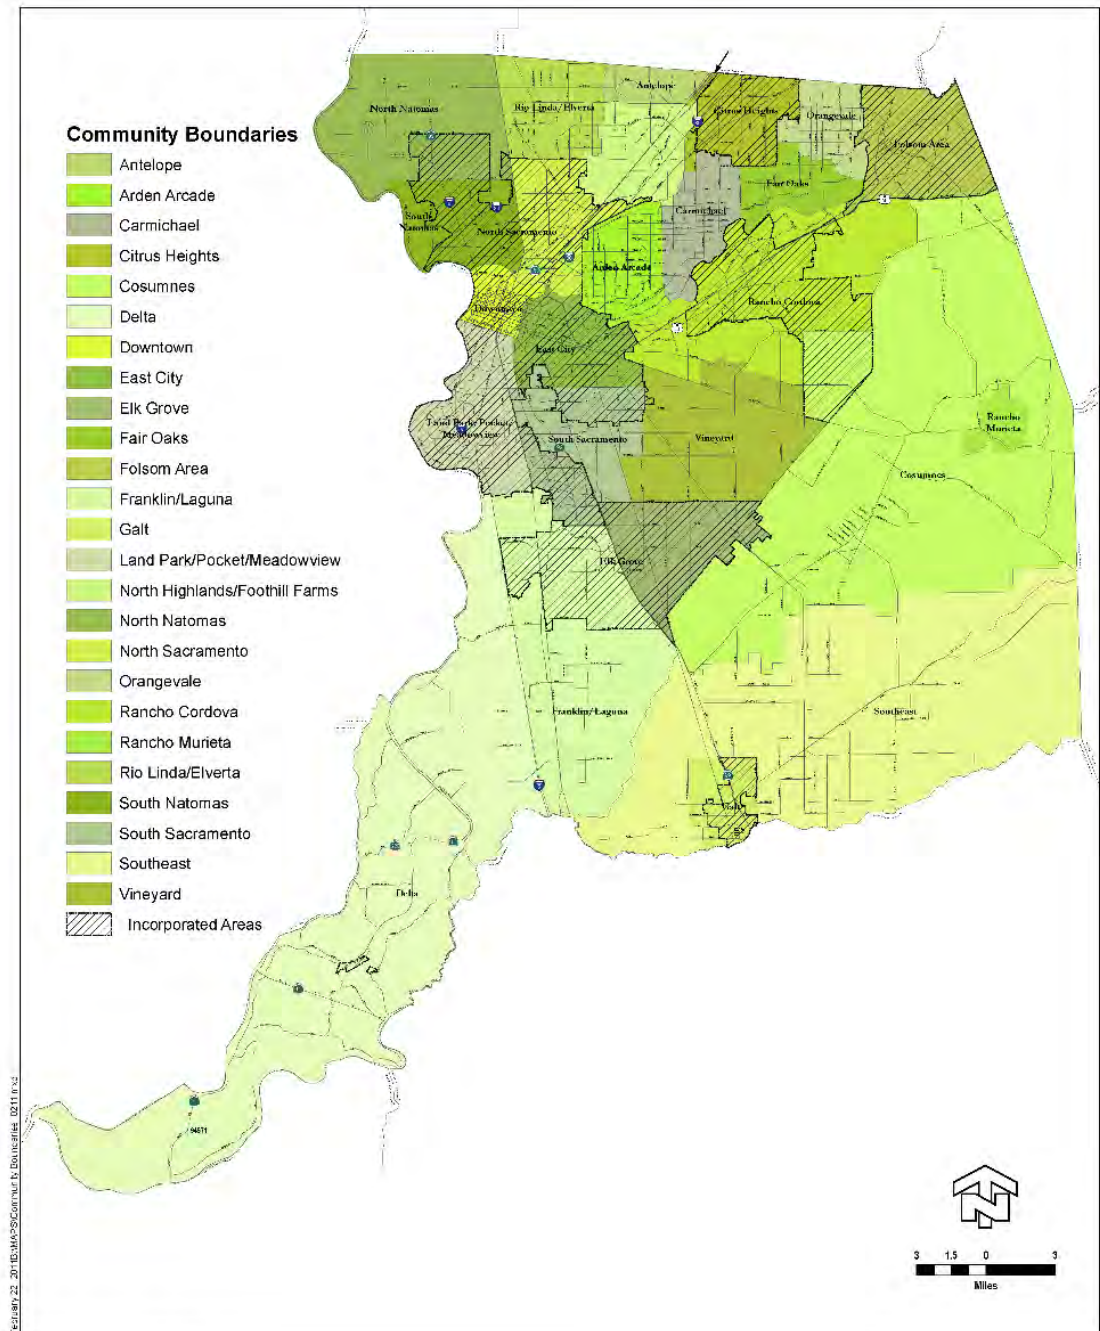

<sup>18</sup><https://planning.sacounty.net/Pages/PlanningandCommunityMaps.aspx>

Figure A-3. Sacramento County Communities

# Employment

The eight largest employers of Sacramento County residents are a mix of public and private sector and are mainly located within incorporated cities, showing the importance of regional bicycle and pedestrian facilities for commute access. The number of local employees by employer is included in Table A-1. This shows the sectors responsible for the majority of employment in Sacramento County are Government and Health Care. This is confirmed to be true for unincorporated County residents as well, as shown in Table A-2, which shows the sectors that employ the highest proportion of residents<sup>19</sup> from unincorporated Sacramento County. A map of job density within Environmental Justice communities is shown in Figure A-5. The lowest job density for those communities occurs throughout North Vineyard and the west portion of North Highlands.

<sup>19</sup><https://onthemap.ces.census.gov/>

Government and health services are the main sources of employment in the County and the majority of employment locations are located in cities along the US 50 corridor.

*Table A-1. Top Sacramento County Employers*

EMPLOYER	SACRAMENTO COUNTY EMPLOYEES <sup>A,B</sup>	ADDRESS	TYPE OF BUSINESS/SERVICE
State of California	77,172	Various	Government

8	Professional, Scientific, and Technical Services	6.10%
9	Manufacturing	4.40%
10	Finance and Insurance	3.90%

Figure A-5. Top Sacramento County Employers

## High Intensity Land Use (Existing and Planned)

Currently, the most intense land uses, including dense residential and commercial development, in the Unincorporated region are spread across the north and east of the county. Commercial uses are mainly lined along major streets such as Watt Avenue, Auburn Boulevard, Howe Avenue and Stockton Boulevard.

Undeveloped land that has been zoned for high density residential and commercial units will generate transportation needs in the future. These will be potentially planned at the following locations:

- Shopping center south of Winding Way and east of Manzanita Ave
- Business and professional offices along Madison Ave and Harrison St
- Businesses along Walerga Road at Antelope Road

# Key Destinations

- Multifamily residential, shopping centers and businesses along Elverta Road and 16th Street
- Multifamily residential along U Street and Elverta Rail Way
- Multifamily residential along Antelope Rd at Monument Drive and along Don Julio Boulevard
- Multifamily residential along Antelope North Road
- Multifamily residential east of Sunrise Blvd at Gold Express Drive

Major travel generators and neighborhood destinations include schools, libraries, parks, commercial corridors, downtown and civic buildings. As shown in Figure A-6, these are generally located across the north and northeast parts of the county, as well as in South Sacramento. The Arden-Arcade area is a major shopping hub, with several other shopping centers along Fair Oaks Boulevard and Sunrise Boulevard.

There are a total of 158 schools in the Unincorporated region, with 17 in Carmichael, 17 in South Sacramento, 13 in North Highlands, 11 in Antelope, 10 in Orangevale, 9 in Fair Oaks, 8 in Rio Linda, and the rest spread across other parts of the county. School traffic is typically generated around 7 am to 9 am and from 2 pm to 4 pm on weekdays.

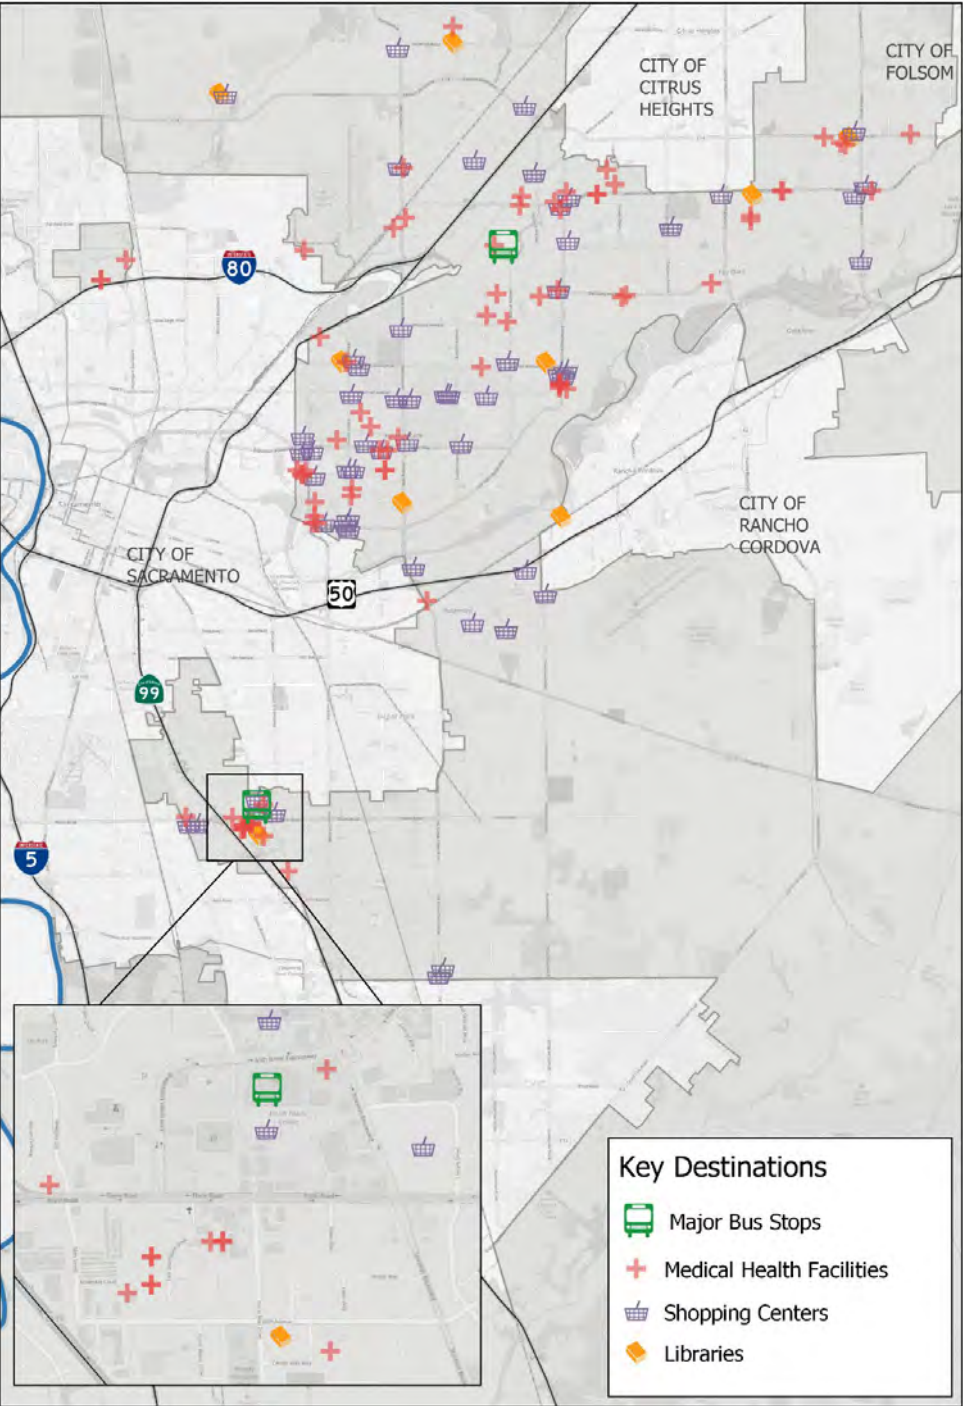

Major medical facilities include Kaiser Healthcare in Arden-Arcade and South Sacramento, VA Hospital in North Highlands, and several other specialty

care services in Carmichael, Fair Oaks and Orangevale.

Popular public libraries are the Arcade Community library, Arden-Dimick library, Carmichael Regional library, North Highlands/Antelope library, Fair Oaks and Orangeville library.

As mentioned earlier, commercial corridors line the arterial streets in eastern North Highlands, Carmichael, throughout Arden-Arcade, Orangevale along Greenback Lane, and South Sacramento along Stockton Boulevard and Franklin Boulevard. These usually generate trips in the evening on weekdays, and mostly over the weekends. American River Parkway, Dry Creek Parkway, Folsom Lake state recreational area, Del Paso regional park and Cosumnes river preserve are among the big parks of the region. Several small parks like the Arcade Creek park, Antelope Community park,

Figure A-6. Key Destinations in Unincorporated Sacramento County

Gibbons Community park and Mission North park, among others are spread across the county. Parks form important hubs of internal active transportation, especially those parks that support bicycling and walking via trails.

# Connectivity: Can residents and visitors get to where they want to go by walking or bicycling?

## EXISTING INFRASTRUCTURE

The Unincorporated region of the County has a mix of Class I, Class II and Class III bicycle infrastructure; however, the network is discontinuous in most areas. While the majority of the roads in North Highlands and South Sacramento communities have connected sidewalks, significant gaps can be noticed in West Arden-Arcade and North Vineyard (Figure A-7 and Figure A-8).

While bikeways compensate for the lack of sidewalks in these communities to some extent, adequate direct connectivity is not provided by the bicycle infrastructure. In the north, bike lanes are absent on Madison Avenue, and discontinuous on Palm Avenue, resulting in poor east-west connectivity from and to North Highlands. The connectivity along Watt Avenue is also broken due to missing stretches of bike lanes between Elkhorn Boulevard and Don Julio Boulevard in North Highlands, and between Madison Avenue and Arden Way in West Arden-Arcade.

Alternative direct bike routes or lanes are not available.

In the south Sacramento communities, bike lanes exist along major roads on Franklin Boulevard and Stockton Boulevard, providing north-south connections. However, Florin Road lacks adequate length of bicycle infrastructure, and only one discontinuous alternative bike lane along 53rd Avenue in the east-west direction. Stockton Boulevard has missing lengths of bike lanes between 21st Avenue and Fruitridge Road, and between Lemon Hill Avenue and Riza Avenue.

The western edge of North Vineyard has bike lanes along South Watt Avenue and Elk Grove-Florin Road, and a short stretch can be found along Bradshaw Road. No bike lanes can be found in the City of Isleton and Galt. Sidewalks and bikeways are present adjacent to major bus stations at American College on College Oak Drive, and at Florin Towne Center on Stockton Boulevard.

## CONNECTIVITY OF KEY DESTINATIONS

Key destinations such as schools and medical facilities are surrounded by sidewalks or bikeways but lack continuous links to most residential areas. Nine schools and one hospital within the unincorporated region were identified that lack any sidewalks and bicycle infrastructure within 750 feet of the site. These are listed below:

School Sites Lacking Adequate Active Transportation Infrastructure:

- Heritage Peak Charter
- Pathways Community Day
- C. W. Dillard Elementary
- Franklin Elementary
- Cosumnes River Elementary
- Sierra-Enterprise Elementary
- Alpha Charter
- Alpha Technology Middle
- Arcohe Elementary

#### Medical Facility Lacking Adequate Active Transportation Infrastructure:

- Altua (Galt)

Out of 76 medical facilities, 30 do not have access to a bus stop for an eighth of a mile, and 10 of these do not have access to bus stops for at least a quarter mile. These include:

- Cornerstone
- Walnut Whitney Convalescent Hospital
- Greater Sacramento Surgery Center
- Altua
- Eskaton Village Care Center
- Eskaton Home Care
- New Dawn Recovery Center
- Sunbridge Brittany Care Center
- Koinonia Group Homes
- Sacramento Area Emergency Housing Center

Parks in North Vineyard do not have any access to either bikeways, or bus stops. Parks in other parts are fairly well connected by bus services but lack bikeway connectivity. Bike trails exist along the American River Parkway and the Dry Creek Parkway.

The Rancho Cordova community library, the Courtland Community library and the Walnut Grove branch library are not connected by either bicycle infrastructure or bus stops.

# Regional and Community Connections

The Sacramento Regional Transit Light Rail connects parts of the county to Sacramento City downtown. The blue line extends north from the city center to Watt Avenue/I-80 interchange in the southern part of North Highlands. In the south, it extends to Consumnes River College. The gold line stretches east all the way to Folsom via Rancho Cordova. None of these lines provide direct connectivity to or between the identified environmental justice communities.

Communities along US 50 have access to the gold line light rail, Folsom Boulevard bike lanes, as well as Jedediah Smith Memorial Trail. Likewise, communities living along I-80 in northern West Arden-Arcade have access to the blue line and the Edison Avenue bike lanes. In the north-south direction along Watt Avenue, bus routes 26, 82 and 84 operate along with intermittent bike lanes, connecting the northern county to Arden-Arcade. The American River College bus terminal as well as the Watt/I-80 RT station in

the north facilitate these connections. The Florin Towne Center in South Sacramento provide connections to bus routes 51, 61, 68 and 81 that expand connections to Sacramento downtown in the north, Consumnes River College in the south, and loops along multiple communities.

Figure A-7. Sidewalks in North Highlands and West Arden-Arcade

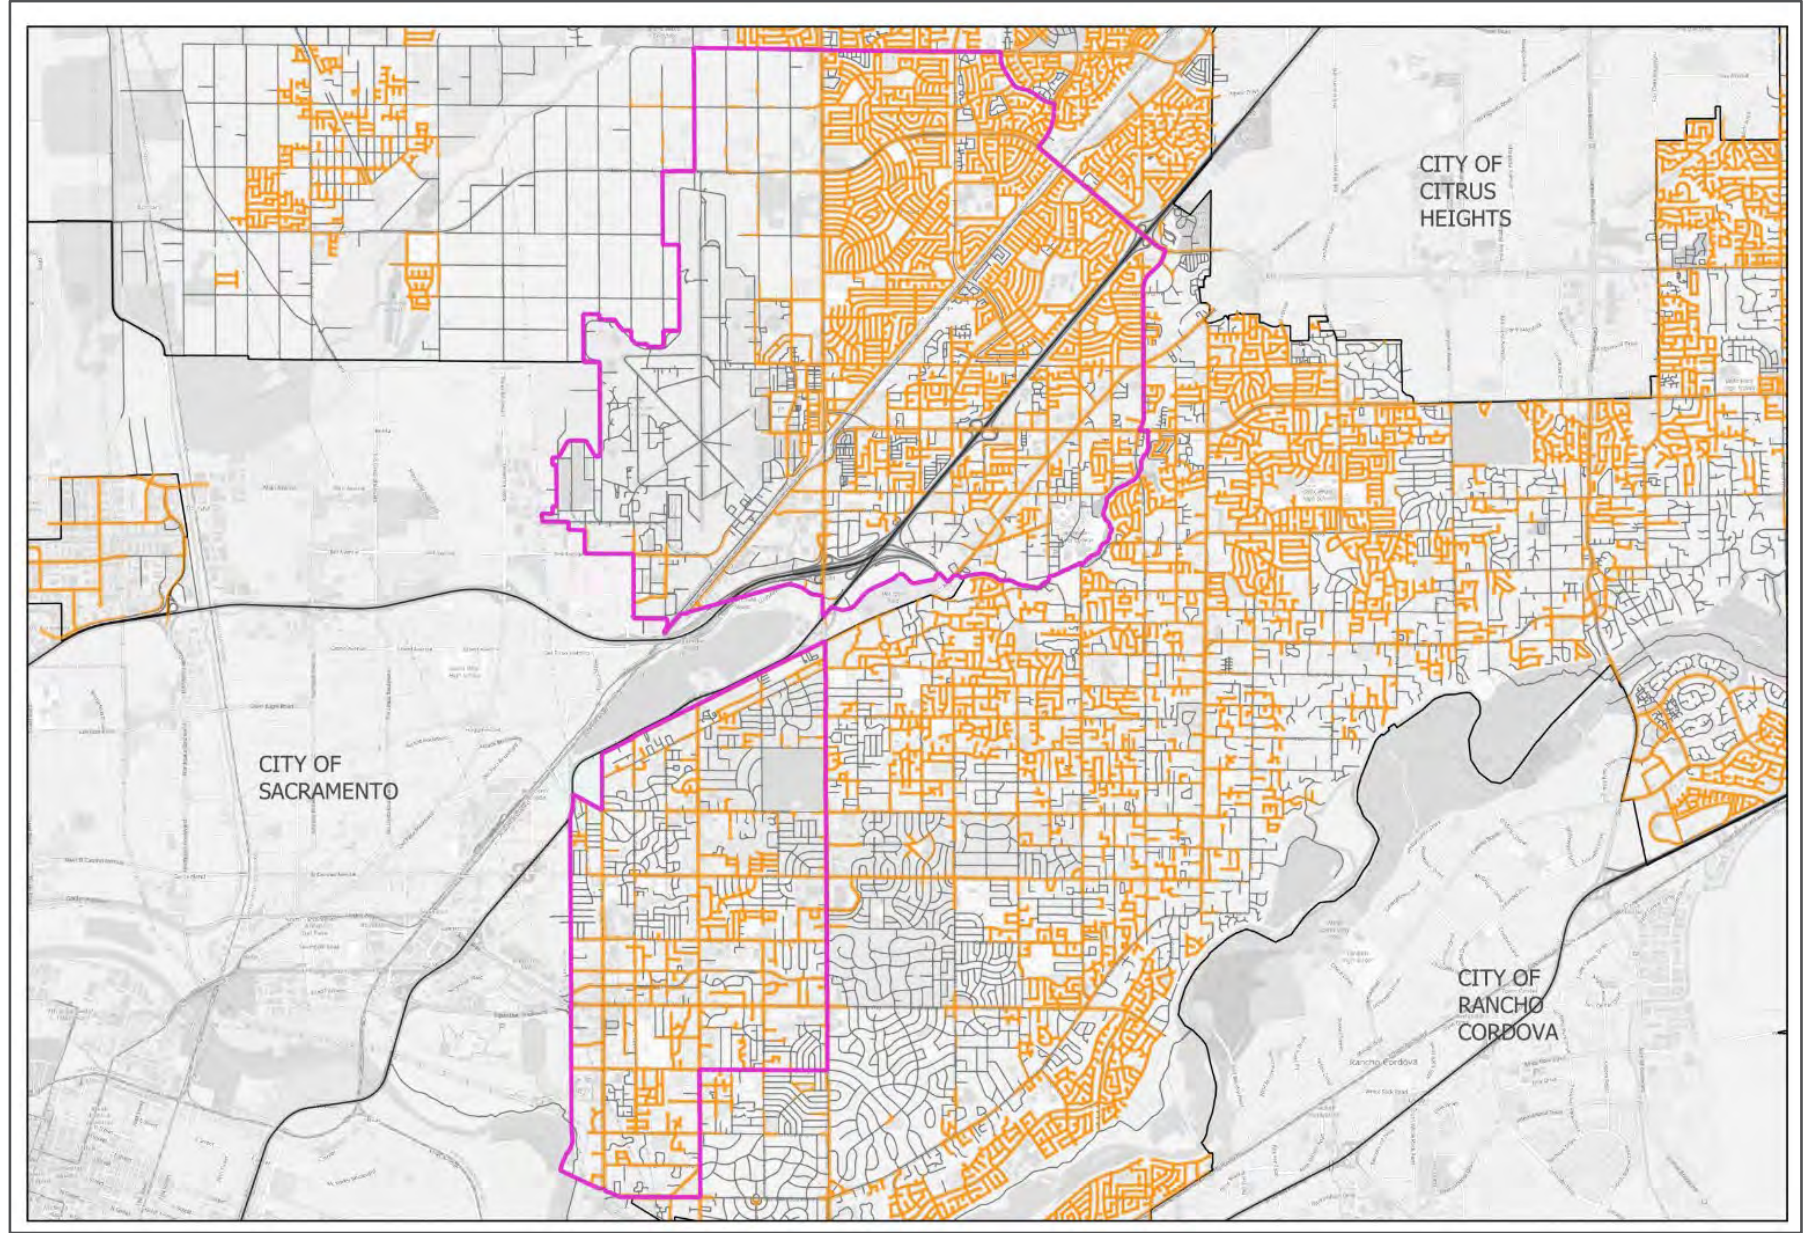

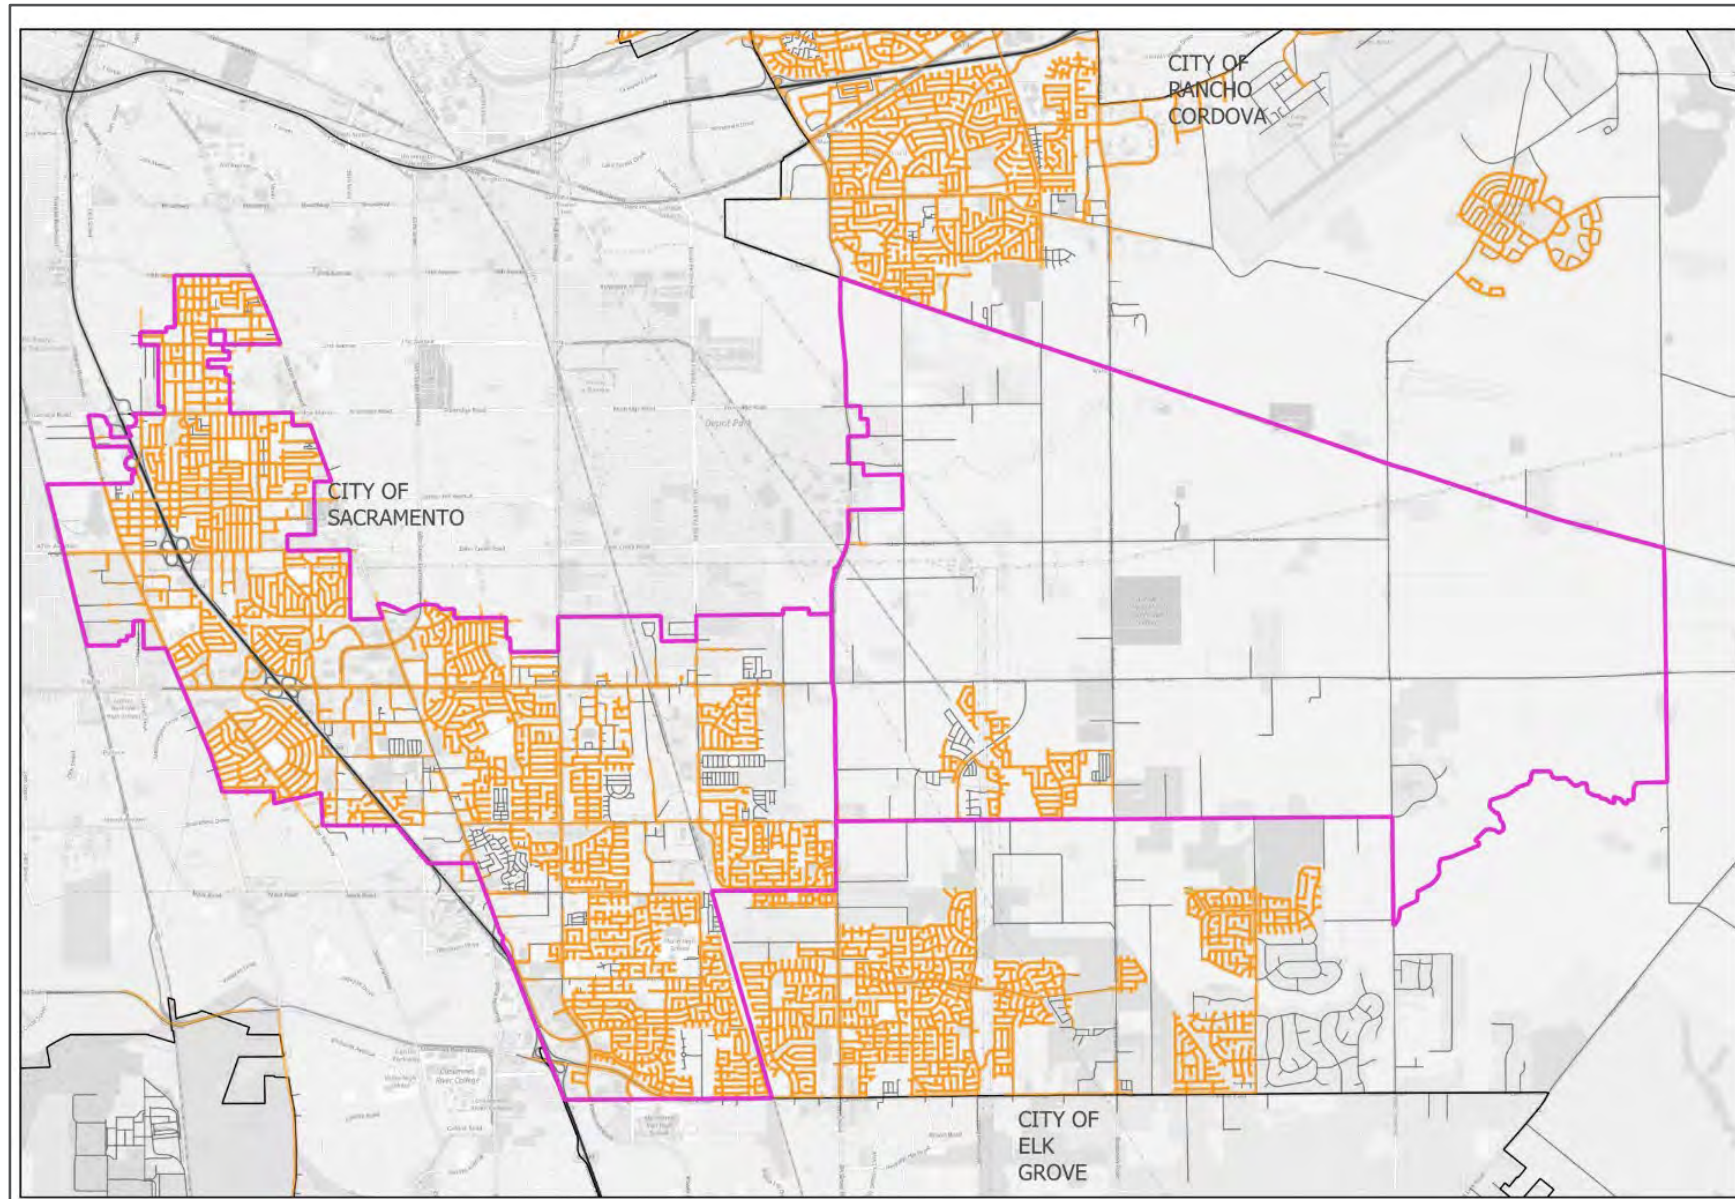

Figure A-8. Sidewalks in South Sacramento and North Vineyard

# Bicycle Parking

Sacramento County Zoning Code Section 5.9.9B sets the minimum bicycle parking requirements by land use. These are shown in Table A-3. There are two types of bicycle parking - short term and long term. Short term bicycle parking in the form of bike racks are typically used for up to two hours, for example a trip to a store or a library. Long term parking is provided for several hours at employment centers, schools and transit hubs. These tend to provide high security through bike cages, lockers or bike rooms. Bicycle parking in the County is typically provided at parks, schools and commercial developments, and specific locations are provided in the County Bicycle Master Plan.

The Sacramento County General Plan, Transit Oriented Development Design Guidelines state that transit stops, commercial areas and other key destinations must provide adequate parking to support bicycle use. Secure and safe bicycle storage areas are recommended. None of the unincorporated communities have established bicycle parking programs however.

*Figure A-9.* Bike Parking Demand

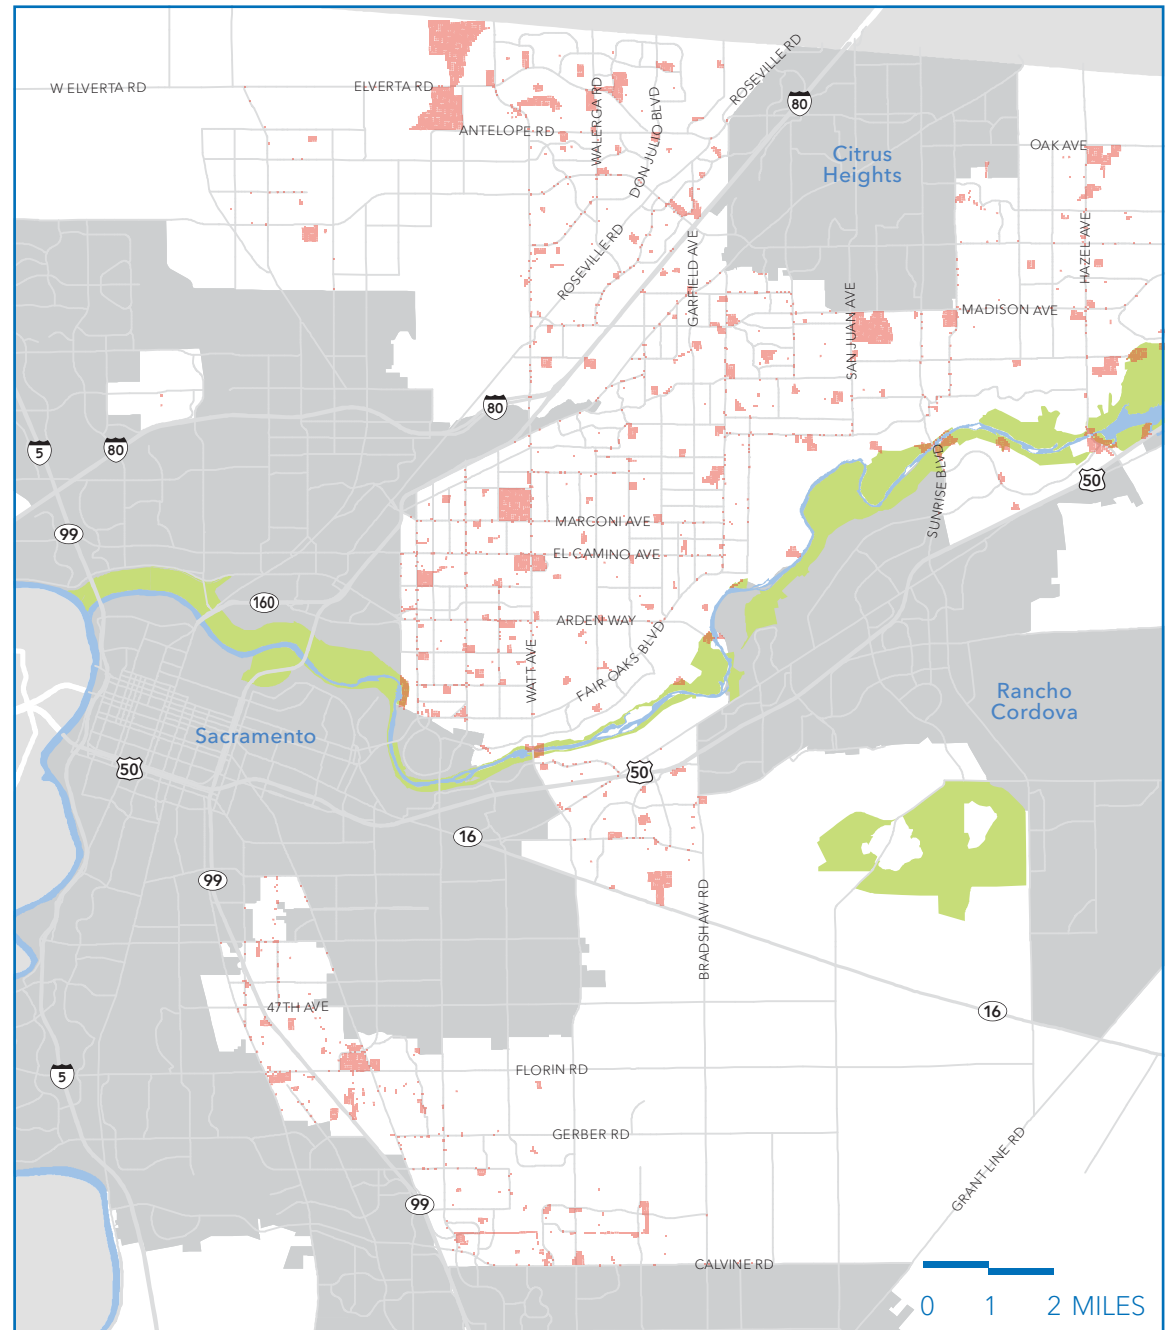

Table A-3. County Bicycle Parking Facility Requirements (Zoning Code)

Use	Bicycle Spaces		Bicycle Parking Facility Class	
	Long-Term	Short-Term	Long-Term	Short-Term
All commercial, mixed-use, and service uses not otherwise listed	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Dinner restaurants, cocktail lounges	One bicycle space for every 50 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Industrial	One bicycle space for every 50 vehicle spaces required or two spaces	0	Class I lockers, or Class II racks in an enclosed lockable area	N/A
Office and institutional uses within commercial and industrial zoning districts	One bicycle space for every 30 vehicle spaces required or two spaces, whichever is greater	One bicycle space for every 60 vehicle spaces required or two spaces, whichever is greater	Class I lockers, or Class II racks in an enclosed lockable area	Class II or Class III racks
Institutional uses in other zoning districts	Bicycle parking shall be determined at the time of issuance of a Conditional Use Permit.			
Multiple Family	For multifamily housing, a minimum of one (1) bicycle parking space per unit shall be provided on-site, with guest bicycle parking spaces provided at one (1) space per 10 units on-site.		Class I lockers or Class II racks shall be located close to and with direct access to multifamily buildings entries. Bicycle parking for guests shall be clustered in common areas for easy convenience.	

# Equity: Does everyone have equitable access to walking and bicycle infrastructure?

## ENVIRONMENTAL JUSTICE COMMUNITY DEMOGRAPHICS

The Sacramento County Environmental Justice Element identifies the North Highlands/Foothill Farms, West Arden-Arcade, South Sacramento, and North Vineyard communities as disadvantaged compared to other parts of unincorporated County based on socioeconomic and environmental characteristics. The goals of identifying these communities is to ensure that the built environment provides an equitable degree of protection from environmental and health hazards and to encourage participation from all members of the community in the decision making process by addressing inequities that can lead to less participation from EJ communities.

Each of the identified communities has a unique character that must be considered when planning public outreach events and prioritizing projects and community investment

- While all of the EJ communities have a relatively similar land area, South Sacramento is a very dense community with 67,362 residents and North Vineyards is very low density with only 1,733 residents and primarily rural agricultural
- North Highlands and South Sacramento Communities have a higher percentage of persons under 20 while West Arden Arcade has a higher percentage of persons over 60
- While unincorporated Sacramento County has a significantly higher population of White residents when compared to California and the City of Sacramento, South Sacramento has a higher proportion of persons of Asian or Hispanic/Latino origin
- Spanish is the second most common primary language in EJ communities and occurs at a much higher rate than broader Sacramento County. Other common languages include Russian in North Highlands/Foothill

Farms, Hmong and Chinese in South Sacramento, and Vietnamese in North Vineyard

- Median Household income is much lower in EJ communities than in Sacramento County and especially when compared to non-EJ communities

## RELIANCE ON ALTERNATIVE TRANSPORTATION AND CONNECTIVITY

The Element focuses on access to healthy food (grocers with fresh produce, food banks, and Farmer's Markets) as a primary goal. It identifies West Arden Arcade and South Sacramento as the regions with the highest rates of food insecurity, representing limited or uncertain access to acquire acceptable food in socially acceptable ways. The policies relevant to this effort include urbanized communities having access to food sources within a quarter mile of transit.

Another focus area is opportunities for physical activity to combat obesity rates, which are highest in West Arden Arcade, North Highlands/Foothill Farms, and South Sacramento. Metrics include miles of Class I facilities per 1,000 residents, which are much lower in EJ communities than in non-EJ communities, and miles of Class II facilities per 1,000 residents, which are lowest in West

Arden-Arcade. North Vineyard has significantly higher density of Class II lanes than anywhere else in the County, however it also has the lowest occurrence of residences within a quarter mile of a park due to its agricultural context and low density. Metrics also includes rates of collisions involving people walking or riding bikes per 1,000 residents, which are higher in EJ communities than non-EJ communities. The relevant policies include requiring smart growth streets and encouraging safe, low stress environments for pedestrians and bicyclists in EJ communities.

# Safety: Can residents and visitors walk or bike safely and comfortably?

## SAFETY

Pedestrian and bicyclists comprise the most vulnerable road users, meaning they are more prone to higher injury severities in case of a collision. This level of vulnerability is a significant factor that affects their decision to use a motorized transportation mode if they perceive their safety and comfort is compromised. Research has also shown that one's perception of safety and comfort contributes significantly to willingness to walk or bike. Specifically, walking and biking on busy roads and crossing busy urban intersections adjacent to high-speed vehicular traffic can easily deter people from walking and biking. Enhancing the safety and comfort perception of non-motorized road users can be attained by decreasing their interaction with vehicular traffic through improved infrastructure. Therefore, creating safer and more comfortable environment for walking and biking should be one of the main goals of the Active Transportation Plan.

A systemic-safety approach was used to identify trends for collisions involving people walking or biking throughout Unincorporated Sacramento County. This analysis reports on both the total number of collisions and collisions that result in a fatality or severe injury (KSI) as well as making use of the Equivalent Property Damage Only (EPDO)<sup>20</sup> method which provides an average severity score across different categories, allowing for direct comparison of collision types without comprehensive traffic volume data. This method is based on a weighting factor, as shown in Table A-4, to assign a severity score based on FHWA and Caltrans guidance. For more information on the methodology of the collision analysis, as well as a more detailed summary of the results, see the **Safety Analysis Report** after this summary.

*Table A-4.* EPDO Weighting Factor by Collision Severity

COLLISION SEVERITY		EPDO FACTOR
Fatal and Severe Injury	Signalized Intersection	120
	Non-Signalized Intersection	190
	Roadway	165
Injury (Other Visible)		11
Injury (Complaint of Pain)		6
Property Damage Only (PDO)		1

<sup>20</sup>2010 Highway Safety Manual (HSM)

# Bicycle and Pedestrian Collision Summary

A review of collision data in Unincorporated Sacramento County for the years 2015-2019 identified 50,832 collisions out of which 2,038 collisions involved someone walking or biking. The key trends and deficiencies identified from the analysis summarized in this document provide a direction of programs and improvements to consider as part of this Plan. A summary of these trends and deficiencies for collisions involving people walking and biking are as follows:

- Pedestrians are shown to be the most vulnerable users, with similar frequency of crashes but much higher crash severities
- The proportion of collisions involving people walking and biking happen ten times more frequently than the proportion of people commuting by walking or biking
- Many more collisions occur at intersections, however collisions occurring along segments are more severe both for people walking and biking
- Within school zones, collisions involving people walking and biking result in less severe injuries, even more so for collisions involving school-age children
- The highest severity collisions involving people biking on a bicycle facility is at Class I roadway crossings

Table A-5 provides a summary of the number and severity of collisions based on mode and location type as well as a comparison to crashes that don't include people walking or biking.

*Table A-5. Collision Frequency and Severity by Type (2015–2019)*

COLLISION TYPE	FREQUENCY	KSI	EPDO	EPDO/COLLISION
Pedestrian Collisions	1,000	348	60,852	60.9
Bicycle Collisions	1,038	139	29,809	28.7
Vehicle Collisions	16,190	1,150	309,126	19.1

Using the EPDO score (which considers both frequency and severity of collisions) several heatmaps, segregated by the involved victim, i.e., pedestrian or bicycle, were created to help with identifying the most pedestrian and bicycle collision prone locations. These heatmaps are presented in the Safety Analysis Report. A visual inspection of the heatmaps was used to identify the corridors with the highest frequency and severity of collisions, both for collisions involving people walking and those involving people biking. These facilities were identified as high injury network (HIN) that warrant further investigation and improvements. The complete list of corridors and locations identified in the HIN are included in the Safety Analysis Report, however Table A-6 lists the top 10 locations for each victim category. Figure A-9 and Figure A-10 show the pedestrian and bicycle collisions heatmaps, respectively, in unincorporated Sacramento County. The color bands also show the HINs.

*Table A-6.* Collision Frequency and Severity by Type (2015–2019)

Location	EPDO/Collision
<b>Pedestrian Collisions</b>

## Factors Affecting Collisions

Further analysis of the collision data highlighted two trends that warrant further study at specific locations and inclusion in the prioritization process. These included primary collision factors that were consistent across the county, and severity of collisions involving people biking on bicycle facilities. Additional details related to these conclusions as well as other trends studied can be found in the Safety Analysis Report.

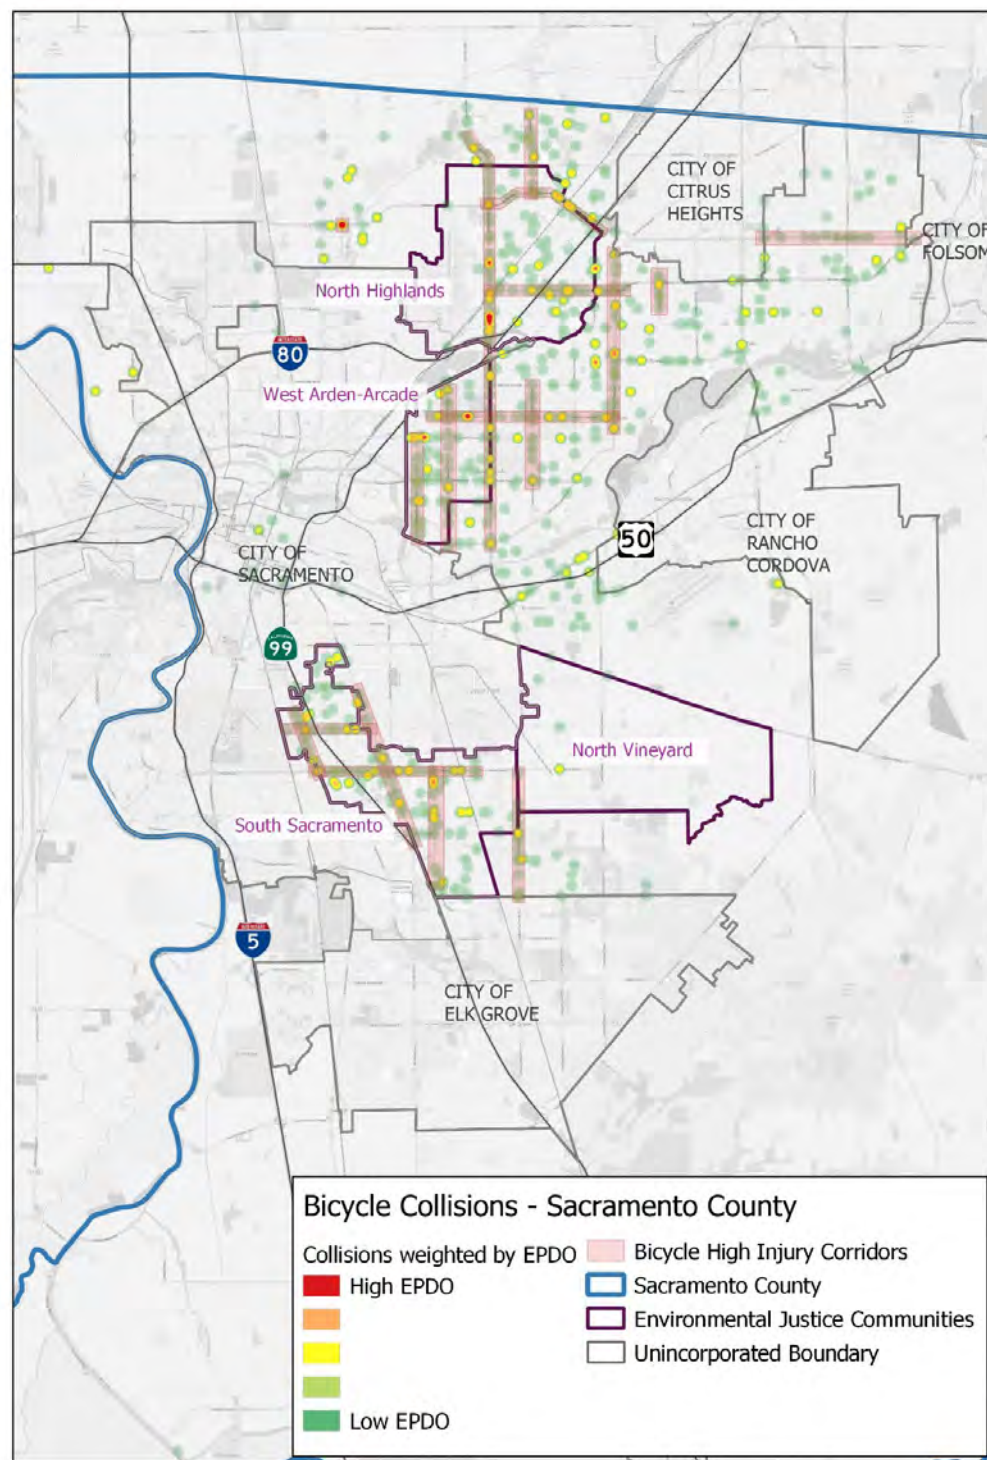

### CONTRIBUTING CRASH FACTORS

One of the primary tools in diagnosing crash records to determine some level of connection to the built environment, environmental conditions, and human behavior is primary collision factor(s).

Pedestrian violations (people walking failing to yield right of way to other vehicles while outside of a legal crosswalk) and pedestrian right-of-way (driver failing to yield right of way

to a pedestrian at a legal crosswalk) were the most frequent contributing factors for collisions involving someone walking in the study area. People failing to yield to vehicles outside of a legal crosswalk was by far the most frequent cause of collisions involving people walking regardless of the collision location, occurring more often than the next four primary causes combined in all scenarios and location types. In comparison, riding on the wrong side of the road (biking against the main direction of traffic) and improper turning (making an unsafe turning movement, or failure to signal) were found as the most frequent contributing factors to collisions involving someone biking. Riding on the wrong side of the road occurring more often than the next five primary causes combined at signalized intersections and the next three primary causes combined along segments. At unsignalized intersections, while riding on the wrong side of the

road was still the most frequent primary cause, however improper turning and impinging on the automobile right of way also significantly contributed as primary collision factors.

It is also important to recognize that unsafe speed resulted in the highest average severity collisions involving people walking at intersections and the second highest average severity along segments. The same results were not replicated for collisions involving people riding bikes, with unsafe speed only having the highest average severity along segments and having lower occurrence at intersections.

### **COLLISIONS ON BICYCLE FACILITIES**

When looking at the frequency and KSI of the collisions that occur on bicycle facilities (Table A-6), 93% of those collisions and 87% of KSI occur on Class II bike lanes, but collisions occurring on Class I or Class III facilities have a much higher average severity. Class I bike paths, which are completely separated from vehicle traffic, show the

highest average severity. The collision locations on these facilities showed that these collisions happened where the bike path crosses the roadway, highlighting improved trail crossings as a specific need. Given these collisions being right-angle collisions and at higher speeds, they would tend to be more severe. Moreover, the average EPDO for collisions involving people biking on Class II bike lane is almost half of the average EPDO for collisions involving people biking on bike routes. Studies have also shown that physically separated bikeways improve road safety for not only bicyclists, but all road users. This finding has been attributed to the fact that roadways with separated bikeways have lower vehicle speeds, which means, in the case of a collision, the resulting severity would be lower.

# Appendix A-2: Safety Analysis Report

Item 6 - Draft Active Transportation Plan, Appendices

# Introduction

This report provides a summary of the collision trends involving people walking and biking and high-risk locations within unincorporated Sacramento County. The analysis includes collision data trends analysis in the study area, spatial analysis of the collisions involving people walking or biking, and the identification of roadways and intersections showing a safety need associated with pedestrians and bicycles, better known as High Injury Network (HIN). The analysis presented in this study used the collision data through the Transportation Injury Mapping System (TIMS).

The purpose of this memorandum is to define the baseline safety conditions to identify trends and patterns found in both locations and types of collisions. This will be used to develop counter-measures and projects that will address deficiencies and improve safety for multimodal travel.

# Summary of Historic Trends and Identified Deficiencies

The key trends and deficiencies identified from the analysis summarized in this document provide a direction of programs and improvements to consider as part of this Plan. A summary of these trends and deficiencies for collisions involving people walking and biking are as follows:

- Pedestrians are shown to be the most vulnerable users, with similar frequency of crashes to those involving people bicycling, but much higher crash severities
- The proportion of collisions involving people walking and biking happen ten times more frequently than the proportion of people commuting by walking or biking
- Three times as many collisions occur at intersections, however collisions occurring along segments are more severe both for people walking and biking
- Within school zones, collisions involving people walking and biking result in less severe injuries, even more so for collisions involving school-age children
- While very rare, the highest severity collisions involving people biking on a bicycle facility is at Class I roadway crossings that lack protective improvements such as RRFB/HAWK signals

# Data Collection and Methodology

## OVERVIEW OF COLLISION DATA

The raw collision data was retrieved from the Transportation Injury Mapping System (TIMS) for the most recent five-year time period available (1/1/2015-12/31/2019). The dataset includes a multitude of information for each collision, including date, time, location, traffic control, weather, severity, primary collision factor, lighting, and CHP notes. While TIMS provides the data for injury and fatality collisions (Property Damage Only – or PDO collisions are not addressed in TIMS), a review of collisions involving people walking or biking shows that the majority of them are no-PDO, hence TIMS database can be used instead of the Statewide Integrated Traffic Records System (SWITRS), which incorporates PDO collisions. Notably, our investigation of the collisions involving people walking or biking in Sacramento showed that less than 1% of collisions involving people walking or biking are PDO. Given that, TIMS

data was found to be sufficient for this level of analysis. All collisions were classified as intersection or segment collisions based on the distance to the nearest intersection. According to the California Local Road Safety Manual (LRSM) and the influence area of the intersections, collisions within 250 feet of an intersection were considered intersection collisions, and all collisions farther than 250 feet from an intersection were considered segment collisions.

## ANALYSIS APPROACH

There are many methods of analyzing crash records to identify systemic trends and patterns as well as priority locations in need of improvements. One important metric to consider is which locations have the highest number of collisions occur, especially the ones that result in the victim being killed or severely injured (KSI). However, it is also important to look for systemic trends that may reveal physical, environmental, or behavioral characteristics that can

lead to insights about where broader ranging policies or programs can be applied to reduce crash occurrences or severity.

This analysis reports on both the total number of collisions and KSI as well as making use of the Equivalent Property Damage Only (EPDO)<sup>21</sup> method which provides an average severity score across different categories, allowing for direct comparison of collision types without comprehensive traffic volume data. The severity score is based on aggregating an EPDO factor that represents the societal and economic cost of different crash severities<sup>22</sup> with values shown in Table A-7. These cost estimates include the monetary losses associated with medical care, emergency services, property damage, lost productivity, and the like, to society as a whole. When summarized across locations (hotspots), collision type, driver behavior, or

<sup>21</sup>2010 Highway Safety Manual (HSM)

<sup>22</sup>Caltrans Local Roadway Safety Manual, Appendix D, April 2020

roadway characteristics, time of day, or environmental conditions can help compare and contrast trends and identify high priority collision characteristics. It should be noted that the EPDO score for collisions involving people walking and biking were determined by the level of injury sustained by the pedestrian or bicyclist. For the other collisions, the EPDO was determined by the highest level of injury sustained by the involved vehicles' occupants.

*Table A-7. EPDO Weighting Factor by Collision Severity*

COLLISION SEVERITY		EPDO FACTOR
Fatal and Severe Injury	Signalized Intersection	120
	Non-Signalized Intersection	190
	Roadway	165
Injury (Other Visible)		11
Injury (Complaint of Pain)		6
Property Damage Only (PDO)		1

For this project and most other safety analyses, the collision severity is defined in the HSM as follows:

- **Fatal injury:** A collision that results in the death of a person within 30 days of the collision.
- **Severe (incapacitating) injury:** A collision that results in broken bones, dislocation, severe lacerations, or unconsciousness, but not death.
- **Other visible (non-incapacitating) injury:** A collision that results in other visible injuries, including minor lacerations, bruising, and rashes.
- **Possible injury (complaint of pain):** A collision that results in the complaint of non-visible pain/injury, such as confusion, limping, and soreness.
- **Property damage only (PDO):** A collision without injury or complaint of pain but resulting in property damage to a vehicle or other object, commonly referred to as a "fender bender."

- **PDO collisions** do not include mechanical issues, such as a flat tire unless the failure results in a collision with another vehicle or object.

For each category of crash descriptors, a summary is provided that includes five-year total of crashes (frequency), KSI, total EPDO, and average EPDO by collision. This approach identified collision patterns for each mode (pedestrian and bicycle) compared to crashes involving all vehicles, resulting in a list of priority locations with a history of those collision types. The list of priority locations was further supplemented through hotspot analysis, which identified intersections and corridors with high KSI and/or EPDO scores (high frequency and/or severity of collisions) and EPDO per collision (high average severity across collisions).

The following sections summarize the key findings of the safety analysis as well as high-risk network or HINs.

# Overview of Countywide Injury Collision Trends

This section summarizes the injury collision trends and patterns in unincorporated Sacramento County and, specifically focusing on collisions involving people walking and biking. In total, 2,038 collisions involving injury to someone walking or biking occurred in unincorporated Sacramento County between January 1, 2015, and December 31, 2019. Of these collisions, 1,000 involved a vehicle colliding with someone walking<sup>23</sup>, 1,038 involved a collision between a vehicle and someone biking. A summary of the frequency and relative severity of these collisions is presented in Table A-8. As can be seen in this table, while the number collisions involving people walking or biking over the five-year period are similar, the resulting EPDO (or average severity) of a collision involving someone walking is more than twice as severe than a collision

involving someone biking, and more than three times as severe as compared to the average severity across all injury crashes.

A review of the 2018 Five-Year American Community Survey (ACS) shows that a large majority (88.7%) of unincorporated Sacramento County residents commute by driving, either alone or in a carpool, while only 1.7% commute by transit, 0.9% commute by walking, and 0.4% commute by biking. Looking deeper at the collisions by only assessing severe injury and fatal collisions, 1,637 severe injury and fatal collisions happened during this period, out of which 487 involved either a pedestrian or a bicyclist. That is, while approximately one out of every nine injury collisions involve someone walking or riding a bike, the proportion increases to almost one out of every three for severe injury and fatal collisions. This disproportionate share, as shown in Figure B-11, illustrates the vulnerability of

pedestrians and bicyclists compared to other road users which, in turn, necessitates proper investigation of collisions involving people walking or biking and countermeasure development.

<sup>23</sup>One collision occurred between someone walking and someone biking, given that the person walking was more severely injured than the person biking, it was categorized with the other collisions involving people walking.

Table A-8. Injury Collision Frequency and EPDO by Type (2015–2019)

COLLISION TYPE	FREQUENCY	KSI	EPDO	EPDO/COLLISION
Pedestrian Collisions	1,000	348	60,852	60.9
Bicycle Collisions	1,038	139	29,809	28.7
Vehicle Collisions	16,190	1,150	309,126	19.1

Figure A-16. Comparison of Commute Mode Split to Proportion of Injury Crashes

## COLLISION LOCATION

Further analysis was conducted to investigate the effect of collision location, i.e., segment versus intersection, on the frequency and severity of collisions involving people walking or biking, as represented by the average EPDO score. Table A-9 presents the collision frequency, EPDO scores, and average EPDO score per collision for each collision type and location for unincorporated Sacramento County.

The results reveal several important trends and possible causes:

- Far more collisions involving people walking or biking (approximately 3 times as many) occur at intersections as compared to segments. This is likely due to the increased number of potential conflict points where vehicles and people walking or biking can interact.
- While many more collisions occur at intersections, the severity of injuries incurred along segments is slightly higher, potentially due to increased vehicle speed
- Based on the average severity (EPDO), collisions involving people walking have twice the severity level as collisions involving people biking and more than three times the average severity level over all crashes
- Despite the commute mode share for walking (0.9%) being more than twice of that for bicycling (0.4%), the frequency of crashes between the two are very similar. This could have two potential causes or a combination: being that bicycle trips are often longer, leading to more exposure, as well as bicycle are more often operating within the same right-of-way as cars.

Table A-9. EPDO Scores for Intersections And Segments

COLLISION TYPE	SEGMENT				INTERSECTION			
	Freq.	KSI	EPDO	EPDO/Col.	Freq.	KSI	EPDO	EPDO/Col.
Pedestrian Collisions	262	107	18,990	72.5	738	241	41,862	56.7
Bicycle Collisions	253	38	8,085	23.0	785	101	21,724	27.7
Vehicle Collisions	6,453	542	142,833	22.1	9,727	608	166,292	17.1

## CONTRIBUTING FACTORS PER LOCATION

One of the primary tools in diagnosing crash records to determine some level of connection to the built environment, environmental conditions, and human behavior is primary collision factor(s), which is recorded by the reporting officer. It is however important to recognize that this is not a description of blame or fault, which is specifically not included in crash records.

Figure A-12 and Figure A-13 show the location, contributing factors, and associated average EPDO scores of

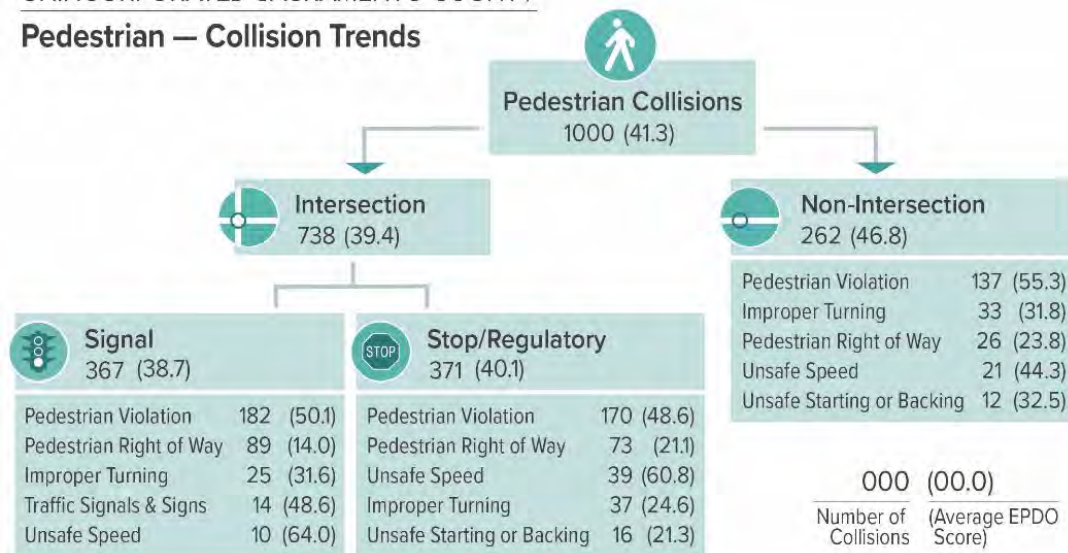

the studied collisions involving people walking or biking, respectively, in unincorporated Sacramento County. Pedestrian violations (people walking failing to yield right of way to other vehicles while outside of a legal crosswalk) and pedestrian right-of-way (driver failing to yield right of way to a pedestrian at a legal crosswalk) were the most frequent contributing factors for collisions involving someone walking in the study area. People failing to yield to vehicles outside of a legal crosswalk was by far the most frequent cause of collisions involving people walking regardless of the collision

location, occurring more often than the next four primary causes combined in all scenarios and location types. In comparison, riding on the wrong side of the road (biking against the main direction of traffic) and improper turning (making an unsafe turning movement, or failure to signal) were found as the most frequent contributing factors to collisions involving someone biking. Riding on the wrong side of the road occurring more often than the next five primary causes combined at signalized intersections and the next three primary causes combined along segments. At unsignalized intersections,

Figure A-17. Collision Location and Contributing Factor - Pedestrian Collisions

## UNINCORPORATED SACRAMENTO COUNTY

## Pedestrian — Collision Trends

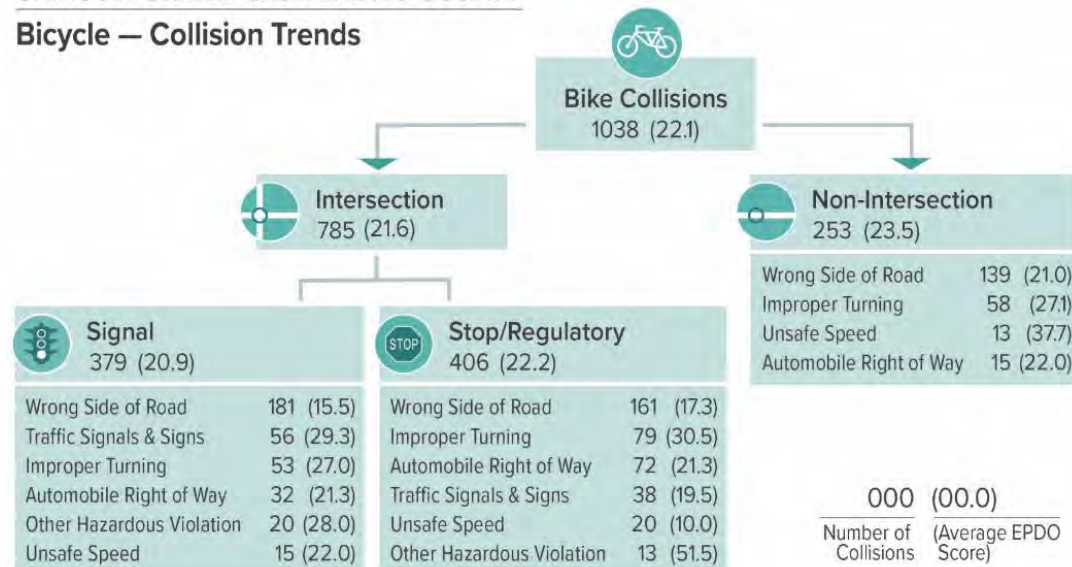

while riding on the wrong side of the road was still the most frequent primary cause, however improper turning and impinging on the automobile right of way also significantly contributed as primary collision factors.

Given the large proportion of crashes associated with pedestrian violations and biking against traffic, later chapters will explore how this trend might be addressed systemically with educational and outreach programs in combination with physical infrastructure that provides safer alternatives.

Figure A-18. Collision Location and Contributing Factor - Bicycle Collisions

## UNINCORPORATED SACRAMENTO COUNTY

## Bicycle — Collision Trends

It is also important to recognize that unsafe speed resulted in the highest average severity collisions involving people walking at intersections and the second highest average severity along segments. The same results were not replicated for collisions involving people riding bikes, with unsafe speed only having the highest average severity along segments and having lower occurrence at intersections.

TIME OF DAY AND LIGHTING

Table A-10 summarizes the pedestrian and bicycle EPDO scores for the time of day and lighting conditions in unincorporated Sacramento County. This table shows that the average EPDO score for collisions involving people walking is significantly higher at night (more than doubled compared with the average EPDO score during daylight condition). A similar observation is made for the collisions including people biking, while the average

EPDO score is less pronounced. For the sake of comparison, the average EPDO (severity) for injury collisions in unincorporated Sacramento County are also provided in this table. Based on these figures, the average EPDO scores for vehicle collisions is less variable for different lighting conditions (i.e., 16.2~33.1) while a strong variability of average EPDO scores for collisions involving people walking or biking as a function of lighting is noticeable (i.e., 25.6~52.5 for collisions including

people biking and 35.3~91.2 for collisions including people walking). The possible explanation for this finding is that during these periods, traffic on roadways is lower than other time intervals during the day. The lower volumes can lead to riskier behavior (e.g., crossing at non-crosswalk locations, riding in the middle of the roadway) while darker conditions and higher speeds can reduce visibility for drivers, increasing the likelihood of severe injuries during darkness.

Table A-10. EPDO Scores by Time of Day/ Lighting

COLLISION TYPE	SEGMENT			INTERSECTION			INTERSECTION			INTERSECTION		
	Freq.	KSI	EPDO/ COL.	Freq.	KSI	EPDO/ Col.	Freq.	KSI	EPDO/ Col.	Freq.	KSI	EPDO/ Col.
Pedestrian Collisions	145	77	91.2	351	181	83.3	471	82	35.3	31	8	47.4
Bicycle Collisions	61	16	52.5	195	33	31.9	747	84	25.6	34	6	35.7
Vehicle Collisions	1,359	199	33.1	3,221	301	22.6	11,089	608	16.2	491	42	21.8

## WEATHER CONDITIONS

Based on the collision analysis shown in Table A-11, the majority of collisions involving people walking or biking happened during clear/cloudy weather conditions. As can be seen in this table, the average EPDO score per pedestrian and bicycle collision is slightly higher during precipitation times compared with clear/cloudy weather conditions while for vehicles this trend is reversed.

However, the difference is not significant enough to highlight the role of weather on increased pedestrian and bicycle injury severity. Although, this slight increase in average EPDO score can be attributed to several factors such as reduced visibility of drivers, slick streets, and tendency towards mid-block crossing (pedestrian violation). Moreover, people are less likely to walk and bike during the rain, hence the

lower numbers of collisions. However, those who walk/bike in the rain are likely the most vulnerable people who do not have any other alternative transportation option. Given this observation, weather conditions were not found to be a significant contributing factor to collisions involving people walking or biking and not investigated further.

Table A-11. EPDO Scores by Weather

COLLISION TYPE	CLEAR/CLOUDY				PRECIPITATION			
	Freq.	KSI	EPDO	EPDO/COI.	Freq.	KSI	EPDO	EPDO/Col.
Pedestrian Collisions	979	339	59,430	60.7	21	9	1,422	67.7
Bicycle Collisions	1,026	137	29,439	28.7	12	2	370	30.8
Vehicle Collisions	15,664	1,125	301,080	22.9	464	18	6,502	14.0

Table A-12. EPDO Scores – Pedestrian and Bicycle Collisions within School Zones

	Frequency	KSI	EPDO	EPDO/Collision
<b>PEDESTRIAN COLLISIONS</b>				
Total	1,000	348	60,852	60.9
Within School Zone (All)	373	112	20,416	54.7
Within School Zone (Under 18)	116	21	4,080	35.2
<b>BICYCLE COLLISIONS</b>				
Total	1,038	139	29,809	28.7
Within School Zone (All)	372	52	11,050	29.7
Within School Zone (Under 18)	111	6	2,030	18.3

## PEDESTRIAN AND BICYCLE COLLISIONS WITHIN SCHOOL ZONES

School zones are known destinations for pedestrians and bicyclists, specifically those aged 18 and younger. For this study, and based on the legal definition, a school zone is an area within almost a quarter-mile of the school property. The locations of all schools in the unincorporated Sacramento County were obtained and a buffer of a quarter-mile was plotted around the schools and all the collisions involving people walking or biking falling in those buffers were identified. Table A-12

summarizes the finding of this analysis. When comparing severity by age group for collisions involving people walking or biking within school zones, children walking and biking within school zones saw lower severity injuries on average. A review of the crash times reveals that the majority of collisions involving school age children walking or biking happen during the periods of 7-9 am and 3-5 pm, when children are arriving at or leaving the schools, respectively. This may be a result of increased congestion from drop-off/pick-up, or increased vigilance due to changed signage and striping within school zones. However,

collisions involving adults walking and biking are more prevalent and spread throughout the afternoon.

SCHOOLS WITH HIGHER SEVERITY COLLISIONS

Following the analysis in the previous section, all the schools in the unincorporated Sacramento County were further investigated based on the number of collisions involving school aged people walking or biking as well as the average EPDO per collision. Table A-13 summarizes the collision statistics for the 10 schools with the highest collision frequency and severity. A complete list of the schools is provided in Appendix A-3 and Appendix A-4.

BICYCLE COLLISIONS ON BICYCLE FACILITIES

To assess the frequency and severity of collisions involving people biking on roadways with and without any bicycle infrastructures, the bicycle facility map of the unincorporated Sacramento County was obtained. Frequency and EPDO scores of all the collisions involving people biking on these facilities were calculated. The summary of this analysis is presented in Table A-14. As can be seen in this table, just as many collisions involving people biking

Table A-13. Schools with the Highest Severity Crashes

School	Frequency	EPDO	EPDO/Collision
David Reese Elementary	5	408	81.6
James Rutter Middle	5	408	81.6
Del Campo High*	9	437	48.6
Will Rogers Middle*	9	437	48.6
Thomas Kelly Elementary*	11	454	41.3
Harry Dewey Fundamental Elementary	12	460	38.3
Sheldon High	15	333	22.2
T. R. Smedberg Middle	15	333	22.2
Highlands High	13	108	8.3
Hillsdale Elementary	13	108	8.3

\*These schools are grouped in one location

occur on bicycle facilities as occur otherwise, and with similar average severity. This means, on average, the presence of bicycle facilities does not reduce the bicycle collision severity. However, when looking at the frequency and KSI of the collisions the occur on

bicycle facilities, 93% of those collisions and 87% of KSI occur on Class II bike lanes, but collisions occurring on Class I or Class III facilities have a much higher average severity. According to Table A-14, collisions on Class I bike paths, which are completely separated from

vehicle traffic, were very rare but show the highest average severity when they occur where the bike path crosses the roadway. Given these collisions being right-angle collisions and at higher speeds, they would tend to be more severe, which highlights improved trail crossings as a specific need. Moreover, the average EPDO for collisions involving people biking on Class II bike lane is almost half of the average EPDO for collisions involving people biking on bike routes. Studies have also shown that physically separated bikeways improve road safety for not only bicyclists, but all road users. This finding has been attributed to the fact that roadways with separated bikeways have lower vehicles speeds, which means, in the case of a collision, the resulting severity would be lower.

*Table A-14.* EPDO Scores – Bicycle Collisions and Bicycle Infrastructure

	Frequency	KSI	EPDO	EPDO/Collision
Total Bicycle Collisions	1,038	139	29,809	28.7
Bicycle Collisions on All Bicycle Facilities	476	62	13,504	28.4
Class I – Bike Path	3	2	386	128.7
Class II – Bike Lane	447	54	11,818	26.4
Class III – Bike Route	26	6	1,300	50.0
Bicycle Collisions not on a Bicycle Facility	562	77	16,305	29.0

# Collision Trends at Environmental Justice Areas

A review of crash types, frequency, and severity of collisions in the Environmental Justice (EJ) areas was performed to ensure that sufficient investment was directed towards improving any safety deficiencies of those areas proportional to need. Overall, the North Vineyard area had a very low occurrence of collisions involving people walking or biking, due to low density and geography of the area. The other three areas all had comparable collision frequency and severity for collisions involving people walking and biking. The Environmental Justice Element also provides a comparison of Bike and Pedestrian collision rates per 1,000 residents<sup>24</sup>, showing that Non-EJ areas have the lowest collision rate with North Vineyard having a collision rate only slightly higher. South Sacramento however has a rate almost twice as high as non-EJ areas and North Highlands and West Arden-Arcade both have a rate more than twice that of non-EJ areas.

<sup>24</sup>Sacramento County Environmental Justice Element (2019), Figure 11

## NORTH HIGHLANDS/FOOTHILL FARMS

Figure A-14 and Figure A-15 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the North Highlands/Foothill Farms EJ area. Pedestrian violations and right-of-way, as well as unsafe speed, were the most frequent contributing factors to pedestrian collisions in this EJ, regardless of the collision location. In contrast, biking on the wrong side of the road as well as improper turning were found as the most frequent contributing factor to collisions involving people biking.

## NORTH VINEYARD

Figure A-16 and Figure A-17 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the North Vineyard EJ area. The number of collisions involving people walking or

biking in this EJ is not significant to help us draw a rigorous conclusion. However, pedestrian violations and unsafe speed were found to contribute to pedestrian collisions while improper turning was the most prevalent contributing factor to collisions involving people biking.

## SOUTH SACRAMENTO

Figure A-18 and Figure A-19 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the South Sacramento EJ area. Pedestrian violations and right-of-way, as well as unsafe speed, were the most frequent contributing factors to pedestrian collisions in this EJ, regardless of the collision location. In contrast, traffic signals and signs, improper turning, and automobile right-of-way were found as the most frequent contributing factors to bicycle-involved collisions.

Figure A-19. Collision Location and Contributing Factor by Frequency and EPDO Score - Pedestrian Collisions in North Highlands/Foothill Farms

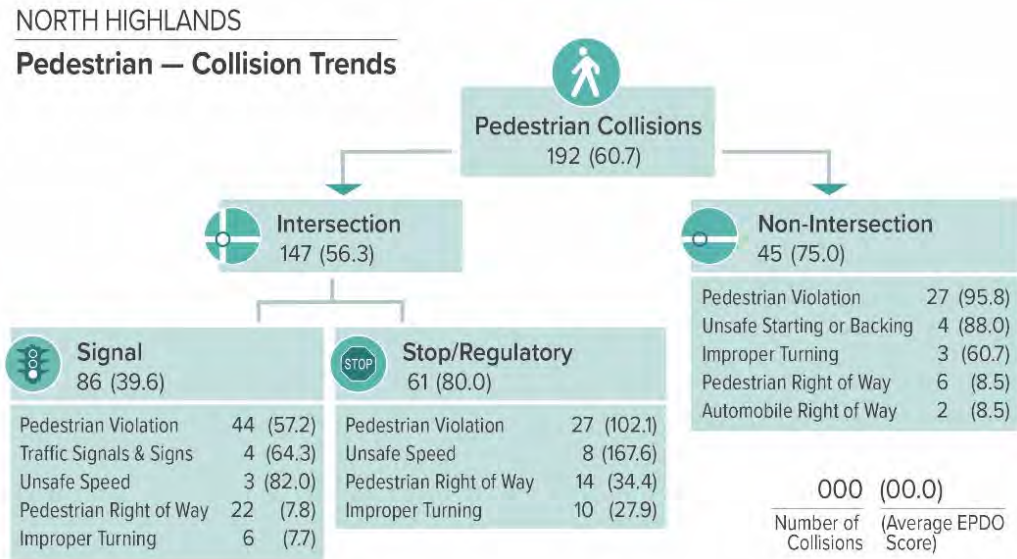

Figure A-20. Collision Location and Contributing Factor by Frequency and EPDO Score - Bicycle Collisions in North Highlands/Foothill Farms

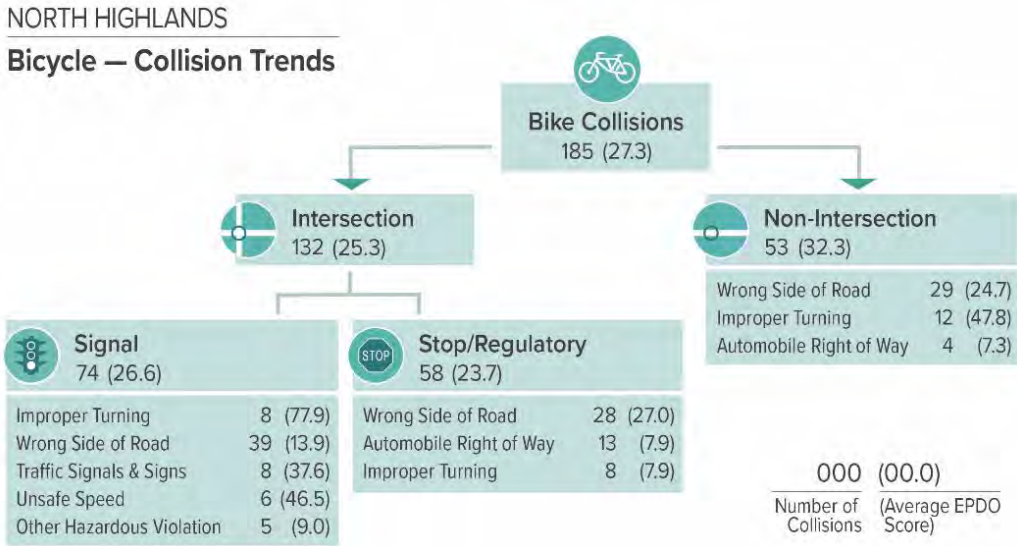

FIGURE B-115: COLLISION LOCATION AND CONTRIBUTING FACTOR BY FREQUENCY AND EPDO SCORE – BICYCLE COLLISIONS IN NORTH HIGHLANDS/FOOTHILL FARMS

WEST ARDEN-ARCADE

Figure A-20 and Figure A-21 show the location, contributing factors, and associated EPDO scores of recent collisions involving people walking or biking, respectively, in the West Arden-Arcade EJ area. Pedestrian violations and right-of-way were the most frequent contributing factors to pedestrian collisions in this EJ, regardless of the collision location. In contrast, bicycling on the wrong side of the road, improper turning, and automobile right-of-way were found as the most frequent contributing factors to bicycle-involved collisions.

## High Injury Network Identification

Using the EPDO score (which considers both frequency and severity of collisions) several heatmaps, segregated by the involved victim, i.e., pedestrian or bicycle, were created to help with identifying the HIN. These heatmaps are presented in Figure A-22 through Figure A-31. Color bands in these figures show the identified HINs. According to the analysis and the heatmaps, several facilities, as summarized in Table A-15 and Table A-16 for collisions involving people walking or biking HINs, respectively, were identified to warrant further investigation and improvements.

Figure A-34. Bicycle Collisions Heatmap - Section 3

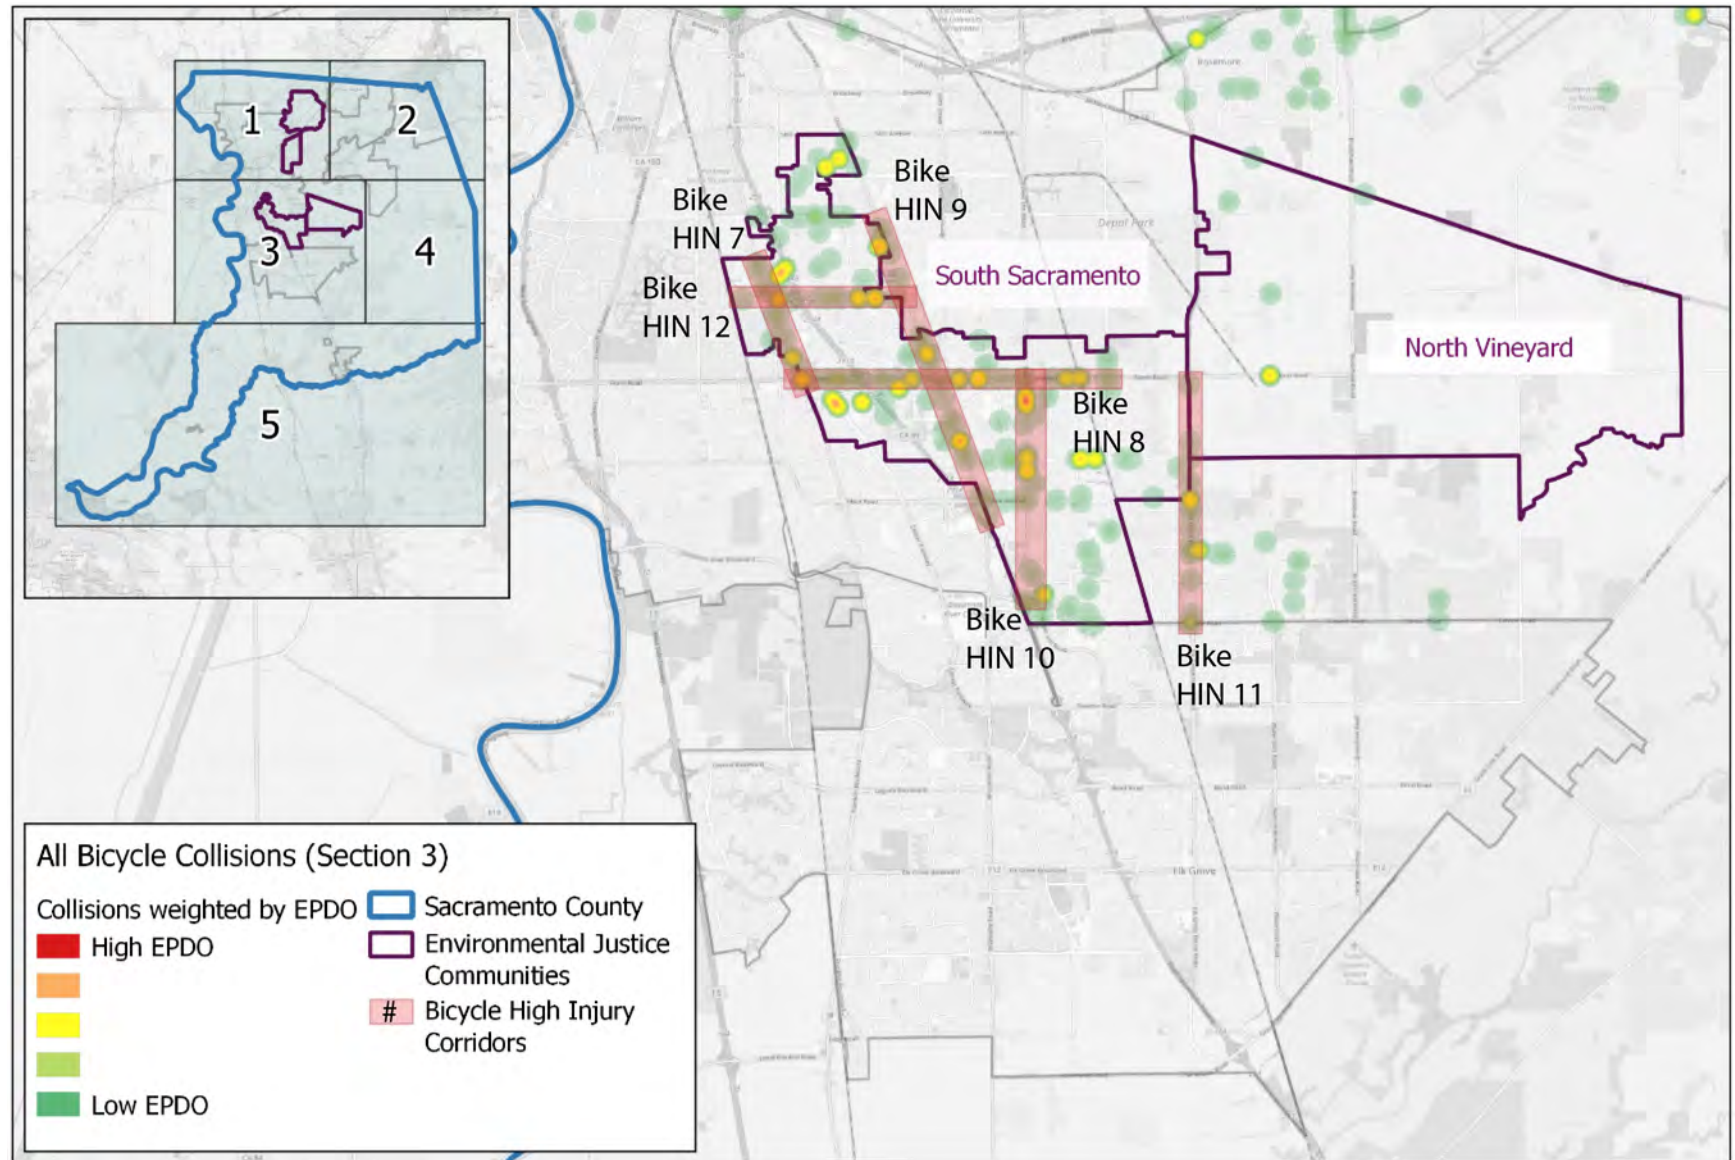

Figure A-35. Bicycle Collisions Heatmap - Section 4

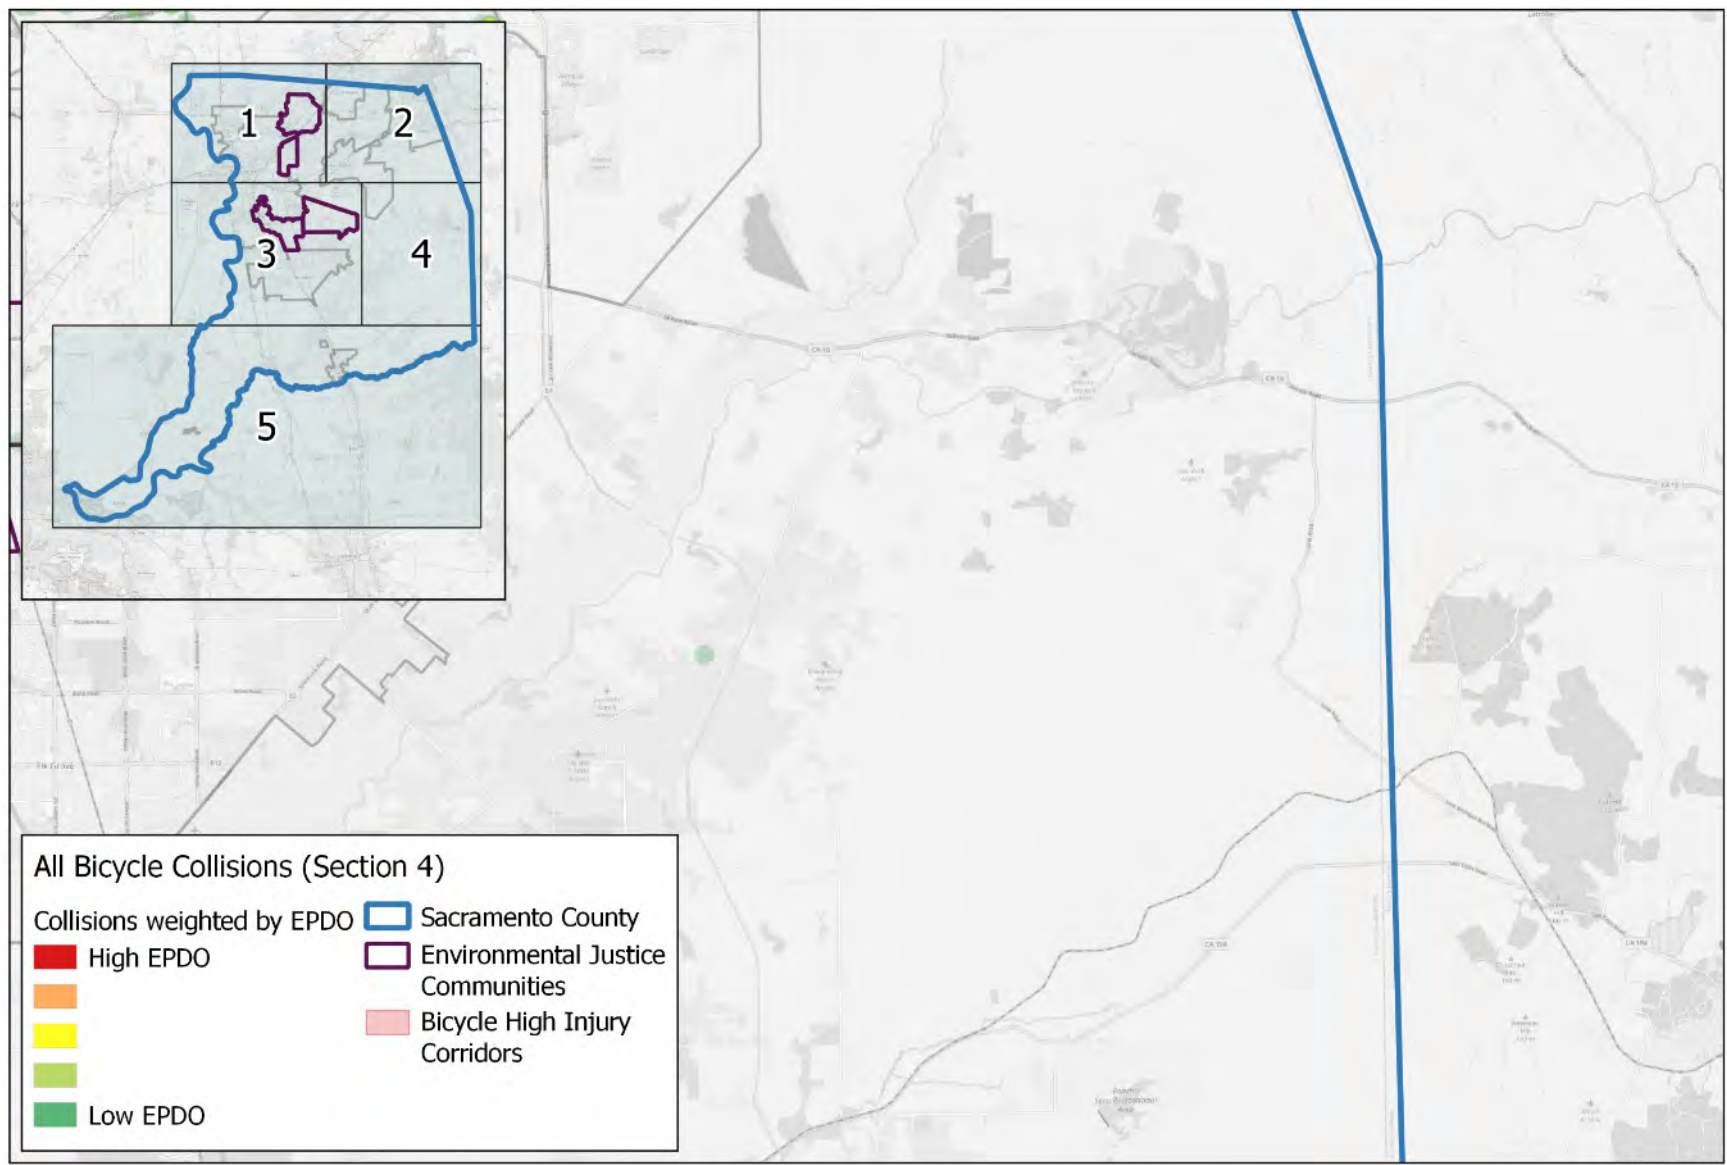

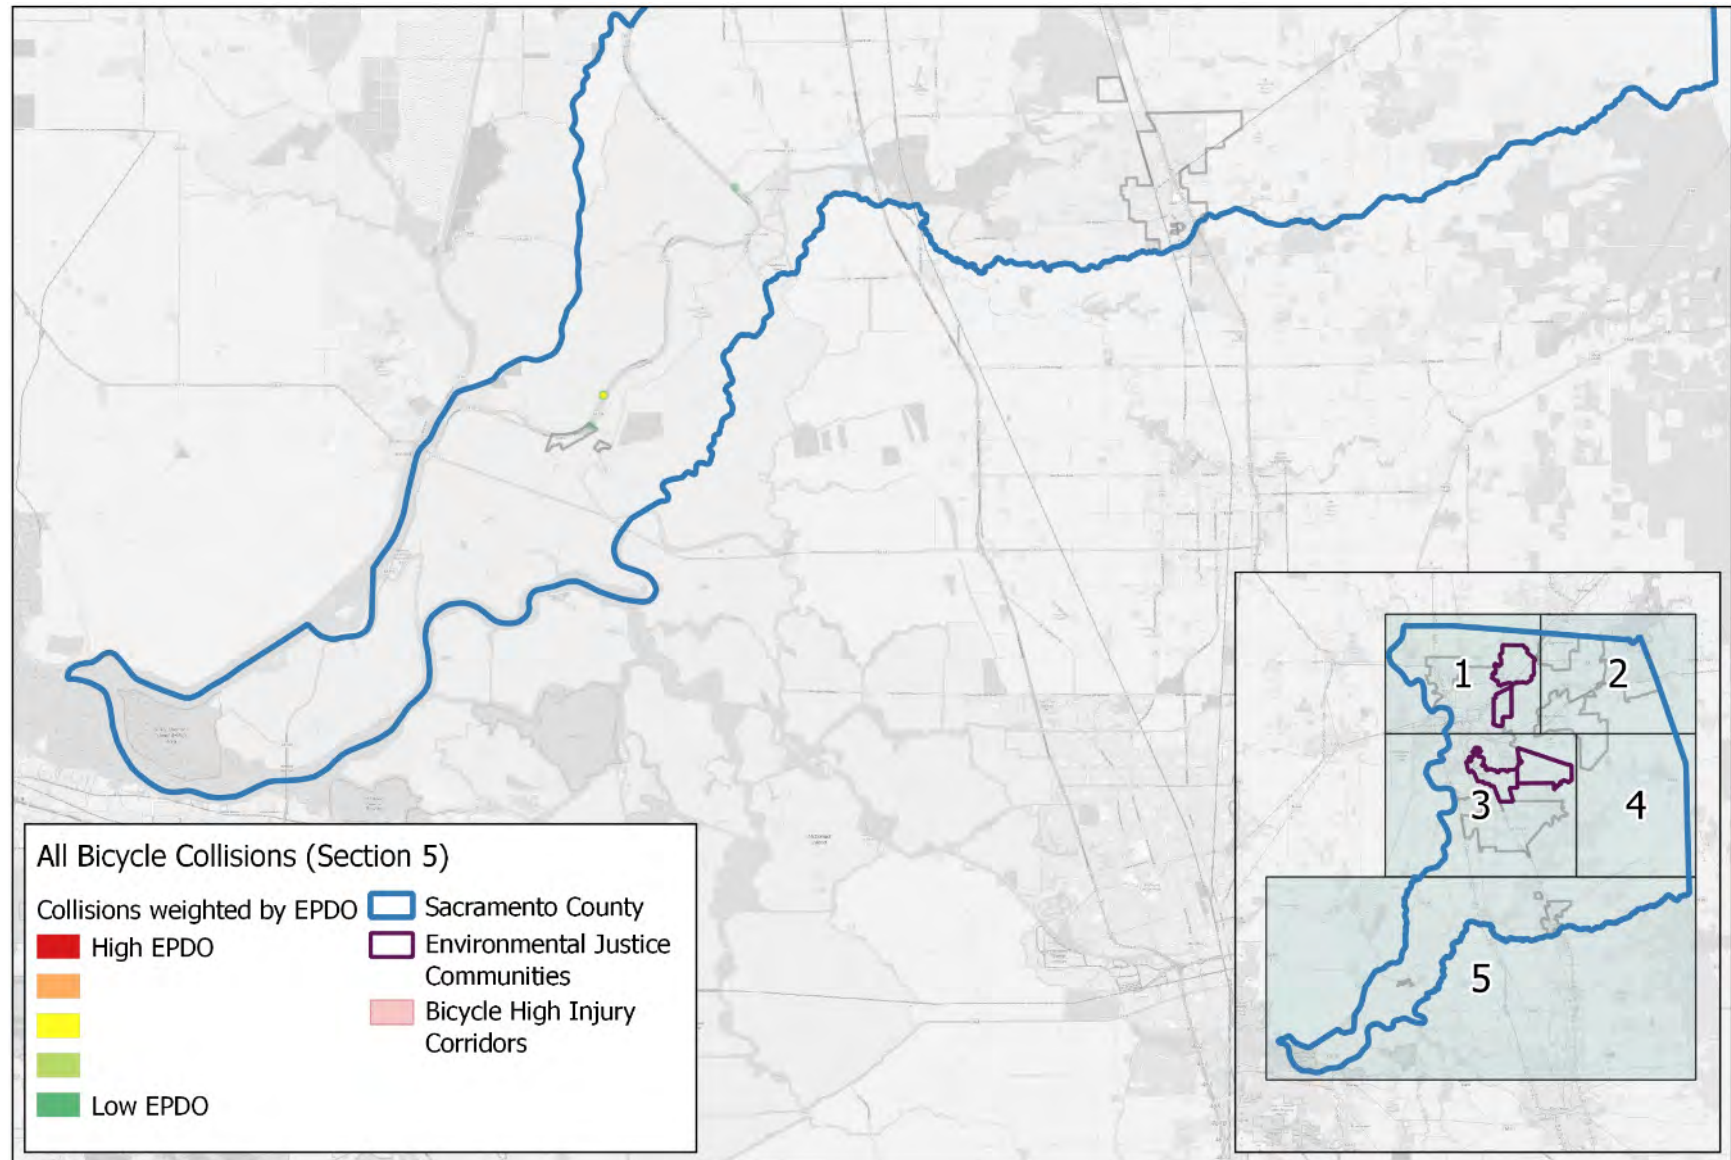

Figure A-36. Bicycle Collisions Heatmap - Section 5

The following tables summarize the number and contributing factors for identified high injury segments. The provided information for each segment includes the length of the roadway, a breakdown of how many crashes involving people walking and biking occurred at intersections with and without striped pedestrian crossings and at midblock locations, and then the top three contributing factors for each segment as found in the associated crash records.

*Table A-15.* Pedestrian Collisions High Injury Network

HIN ID	Extents	Length	Collisions at Intersections	Collisions at Intersections with Ped Xing	Collisions at Mid-Block Xing	Factor 1	Factor 2	Factor 3

## Appendix B: Community Engagement

# Public Engagement Plan

## INTRODUCTION

### Project Background

Sacramento County is updating and combining their prior Bicycle and Pedestrian Master Plans into a countywide Active Transportation Plan. Working with Alta Planning + Design, WALKSacramento and DKS, the County seeks to engage the County's environmental justice communities, non-English speaking households, people without internet access, and other hard-to-reach populations to create a plan that makes walking, bicycling and active modes safe and accessible for all.

### Objectives

The fundamental objectives of the Public Engagement Plan (PEP) are to:

- Ensure that those with a stake in Sacramento County ATP are identified;
- Identify outreach techniques for engaging these stakeholders;
- Ensure all stakeholders have open access to and input in the decision-making process and are provided with information about the project as it moves forward;
- Provide reasonable public access to technical and other information about the project; and
- Ensure the concerns, issues and preferences of stakeholders are gathered, and are reflected in the final document.

### Priority Audiences

- People who use active transportation as a frequent mode of transportation (walk, bike, rolling, mobility devices, etc.)
- People who are interested in biking but perceive barriers
- Households with zero or one vehicle
- Residents of Environmental Justice communities
  - North Highlands/Foothill Farms
  - West Arden Arcade

- North Vineyard

- South Sacramento

- Households with limited English-speaking proficiency
- Households with no internet access

### Stakeholders

#### Organized Interest Groups

The following groups are prioritized for stakeholder meetings during Phase 1 outreach. These groups represent priority audiences throughout the County and in EJ communities and can provide a high-level overview of current conditions and priorities for active transportation that are relevant to their audiences.

#### Bike and Active Transportation Organizations

- Sacramento County Bicycle Advisory Committee
- Sacramento Area Bicycle Advocates
- Folsom Area Bicycle Advocates

- o Bike Lab
- o Project Hero
- o Contagious Wheels
- o Sacramento Wheelmen Bicycle Group
- o Sacramento Bike Hikers

#### Transportation Management Agencies

- o Sacramento Transportation Management Agency
- o 50 Corridor Transportation Management Agency
- o North Natomas Jibe
- o South Natomas Transportation Management Agency
- o McClellan Transportation Management Agency
- o Power Inn Alliance

#### Disability Organizations

- o Sacramento County Disability Advisory Commission
- o Resources for Independent Living
- o Society for the Blind
- o On My Own Community Services

- o Seeds of Partnerships
- o NorCal Services for Deaf and Hard of Hearing
- o ACB Capital Chapter of the California Council of the Blind
- o Alta California Regional Center
- o American Association of People with Disabilities (AAPD)
- o California Association of the Deaf
- o Californians for Disability Rights
- o Disability Rights Advocates
- o Disability Rights California
- o Easterseals Superior California
- o Pride Industries
- o SacRT Access Services
- o SacRT Mobility Advisory Council
- o United Cerebral Palsy of Sacramento and Northern California
- o Wounded Warrior Project

#### Environmental Justice Organizations

- o Red Black and Green EJ Coalition

- o Impact Sacramento
- o Stephens Foundation
- o Environmental Council of Sacramento
- o Organize Sacramento
- o Sacramento Tree Foundation
- o Sacramento Steps Forward
- o Everyday Impact Consulting
- o Sierra Club Sacramento

#### Community-Based Organizations/ Cultural Brokers

- o Building Healthy Communities
- o Black Child Legacy Campaign
- o Sacramento Area Congregations Together (SacACT)
- o United Latinos
- o Asian Resources
- o Roberts Family Development Center
- o Mutual Assistance Network
- o Latino Coalition for a Healthy California (LCHC)

- o Lao Family Community Development
- o Lu-Mien Community Services
- o Gujarati Samaj of Sacramento
- o Greater Sacramento Urban League
- o Homng Innovating Politics (HIP)
- o La Familia Counseling Center

#### Sacramento County Agencies

- o Public Health Department
- o Department of Human Assistance
- o Planning and Environmental Review
- o Emergency Services
- o Sheriff's Department
- o Office of Education
- o Disability Compliance Office
- o Therapeutic Recreation Services

#### Youth Organizations

- o First 5 Sacramento

- o Sacramento County Youth Commission
- o SACOG Youth Leadership Academy
- o Pro Youth and Families
- o Sacramento Chinese Community Service Center
- o 916 Ink
- o Boys and Girls Club of Greater Sacramento
- o Hands4Hope
- o Omni Youth Programs
- o Sol Collective
- o Youth Development Network

#### Older Adult Organizations

- o AARP - Sacramento Chapter
- o Sacramento County Adult and Aging Commission
- o Older Women's League, Sacramento Capitol
- o Agency on Aging Area 4
- o ACC Senior Services

#### Health Organizations

- o American Heart Association - Sacramento Chapter
- o Breathe California
- o Safe Kids Greater Sacramento
- o UCD Trauma Prevention
- o Health Education Council

#### Transit Agencies

- o Sacramento Regional Transit
- o E-Tran
- o South County Transit
- o Paratransit

#### Neighboring Jurisdictions

- o City of Sacramento
- o City of Rancho Cordova
- o City of Elk Grove
- o City of Folsom
- o City of Citrus Heights
- o City of Isleton
- o City of Galt
- o Sutter County

- o Placer County
- o El Dorado County
- o Amador County
- o San Joaquin County
- o Solano County
- o Yolo County

### Community-Focused Engagement Partners

The following groups are community-oriented organizations that may be able to support community-focused engagement activities such as pop-up events.

Location	Organizations
Countywide	Sacramento Food Bank and Family Services ACC Senior Services Hmong Innovating Politics Lu-Mien Community Services Lao Family Community Development Community Resource Project Mutual Assistance Network Greater Sacramento Urban League
North Highlands/ Foothill Farms	Impact Sac Black Child Legacy of North Highlands/Foothill Farms Liberty Towers North Highlands Parks and Recreation District Sunrise Parks and Recreation District 80 Watt District Property Business Improvement District North Sacramento Chamber of Commerce North Highlands/Foothill Farms CPAC
West Arden-Arcade	Opening Doors Inc World Relief Sacramento Black Child Legacy of Arden Arcade Fulton-El Camino Parks District Arcade Manor Parks District Arden Park Parks District Mission Oaks Park District Greater Arden Chamber of Commerce Arden Arcade CPAC
Vineyard	Southgate Recreation and Parks District Vineyard CPAC

Location	Organizations
South Sacramento	Martin Luther King Jr. Neighborhood Association Franklin Neighborhood Development Corporation Building Healthy Communities La Familia Counseling Center Southgate Recreation and Parks District Mack Road Partnership Stockton Blvd Partnership South Sacramento CPAC Pro Youth and Families
Rural County (Delta and East communities)	California Rural Legal Assistance River Delta USD Sacramento County Farm Bureau Isleton Chamber of Commerce California FFA Center Rancho Murieta Community Services District Galt Historical Society

### Youth-Focused Engagement Partners

The following groups are youth-oriented organizations that may be able to support youth-focused engagement activities such as Video and Photo Voice, which are projects where students highlight and describe their concerns and priorities around transportation and the built environment through videos or photo journals.

- Boys and Girls Club of Greater Sacramento
- Sacramento Chinese Community Service Center
- Roberts Family Development Center
- 916 Ink
- Sol Collective
- Youth Development Network
- Onmi Youth Programs
- Hands4Hope
- Pro Youth and Families

### School Districts

- o Twin Rivers Unified School District
- o Sacramento City Unified School District
- o Elk Grove Unified School District
- o San Juan Unified School District
- o Folsom Cordova Unified School District

### Promotional Partners

These groups can help spread the word about the project, share the survey and other resources, and direct people to the website for additional input and information.

- County Supervisor Districts
  - o Supervisor Susan Peters
  - o Supervisor Patrick Kennedy
  - o Supervisor Don Nottoli
  - o Supervisor Phil Serna
  - o Supervisor Sue Frost

### Countywide Community-Based Organizations

- o International Rescue Committee – Sacramento
- o Sacramento Tree Foundation
- o Sacramento Valley Ministers' Wives & Ministers' Widows
- o United Way Capital Region
- o Sacramento Transit Rider's Union

### Business and Chambers of Commerce

- o Hispanic Chamber
- o Black Chamber
- o Greater Sacramento Vietnamese American Chamber
- o Asian Pacific Chamber
- o Slavic American Chamber
- o Metro Chamber
- o California Delta Chamber
- o Carmichael Chamber
- o Citrus Heights Chamber

- o East Sacramento Chamber
- o Elk Grove Chamber
- o Fair Oaks Chamber
- o Folsom Chamber
- o Galt Chamber
- o Greater Arden Chamber
- o Isleton Chamber
- o North Sacramento Chamber
- o Orangevale Chamber
- o Rancho Cordova Chamber
- o Sacramento Area Women's Chamber
- Rainbow Chamber
  - o Local Media
  - o Sacramento Bee
  - o Sacramento Observer
  - o Sacramento News and Review
  - o Sac Cultural Hub
  - o KDEE (Black Chamber radio station)
- o Latino 97.9 radio station
- o Sacramento Business Journal
- o Capital Public Radio (NPR)
- o Sacramento 365
- o Entercom

## LOCATION-SPECIFIC STAKEHOLDERS

The following table lists stakeholders specific to communities within the County, with a priority emphasis on the County's EJ communities.

	North Highlands/ Foothill Farms	West Arden Arcade	North Vineyard	South Sacramento	Non-EJ Unincorporated
Community Based Organizations and Neighborhood Groups	<ul style="list-style-type: none"> <li>• Impact Sac</li> <li>• Black Child Legacy of North Highlands/ Foothill Farms</li> <li>• 80 Watt District Property Business Improvement District</li> <li>• North Sacramento Chamber of Commerce</li> <li>• North Highlands/ Foothill Farms CPAC</li> </ul>	<ul style="list-style-type: none"> <li>• Opening Doors Inc</li> <li>• World Relief Sacramento</li> <li>• Black Child Legacy of Arden Arcade</li> <li>• Greater Arden Chamber of Commerce</li> <li>• Arden Arcade CPAC</li> </ul>	<ul style="list-style-type: none"> <li>• Vineyard CPAC</li> </ul>	<ul style="list-style-type: none"> <li>• Martin Luther King Jr. Neighborhood Association</li> <li>• Franklin Neighborhood Development Corporation</li> <li>• Building Healthy Communities</li> <li>• La Familia Counseling Center</li> <li>• Mack Road Partnership</li> <li>• Stockton Blvd Partnership</li> <li>• South Sacramento CPAC</li> </ul>	<ul style="list-style-type: none"> <li>• Fair Oaks Chamber of Commerce</li> <li>• Orangevale Chamber of Commerce</li> <li>• Carmichael Chamber of Commerce</li> <li>• California Delta Chamber of Commerce</li> <li>• Antelope CPAC</li> <li>• Carmichael/Old Foothill Farms CPAC</li> <li>• Cordova CPAC</li> <li>• Cosumnes CPAC</li> <li>• Delta CPAC</li> <li>• Fair Oaks CPAC</li> <li>• Natomas CPAC</li> <li>• Orangevale CPAC</li> <li>• Rio Linda/Elverta CPAC</li> <li>• Southeast Area CPAC</li> </ul>

# Outreach Phases, Goals, and Strategies

## BIKE BUSINESSES

The following list of bike businesses will be included in outreach efforts.

- Bob's Cycle Center
- Neighborhood Bike Shop of Antelope
- Kinetic Cycles
- Carmichael Bike Shop
- Laid Back Cycles
- Biker Bar & Café
- Bike Medic
- Green Flag Racing
- Big Dream Bike Tours LLC
- River Rat Raft Rental Inc
- AR Cycles
- AlphaBent
- Practical Cycle

The public outreach process will have two major phases: the first phase will solicit feedback on existing conditions, key destinations, and community concerns (Task 2), while the second phase will engage the public to provide feedback on the active transportation network analysis (Task 4) and the list and prioritization of recommended projects (Task 5). Note that the dates for each phase below are draft and subject to change.

## PHASE 1

Phase 1 will center on listening to the community and soliciting feedback on existing conditions, key destinations, and community concerns. It will run from August 2020 to November/December 2020.

## Phase 1 Goals

- Ensure that those with a stake in Sacramento County ATP are identified;
- Identify outreach techniques for engaging these stakeholders;
- Ensure all stakeholders are provided with information about the project as it moves forward;
- Develop a shared vision and goals for active transportation in the County;
- Identify key corridors and destinations, active transportation infrastructure gaps, and opportunities for improvement;
- Ensure the concerns and issues of stakeholders are heard and gathered.

## Phase 1 Messaging

- We are working to create an Active Transportation Plan to make it safer, easier, and more comfortable for people all across the County to get around by foot and by bicycle
- Focus on identifying issues, not solutions
  - o How do you get around? How would you like to get around? (to work, school, parks, stores, etc)
  - o [If they bike/walk] Why do you bike and walk? What do you like about it? What don't you like about it?
  - o [If they don't bike/walk] How do you get around? Why don't you walk and bike? When in your life did you walk and bike? What changed?

## PHASE 2

Phase 2 will center on presenting the draft project and program recommendations, prioritization, design guidelines, and active transportation network analysis to the community, and soliciting feedback in order to make the final project and program recommendations, and prioritization. It will run from March to July 2021.

## Phase 2 Goals

- Ensure that stakeholders identified in Phase 1 are engaged;
- Ensure all stakeholders are provided with information about the project as it moves forward, including the draft project and program recommendations, prioritization, design guidelines, and active transportation network analysis;
- Receive feedback on desired adjustments to draft project and program recommendations, prioritization, and design guidelines;
- Ensure the concerns and issues of stakeholders are heard and gathered.

## Phase 2 Messaging

- In Phase 1, we heard the following concerns from residents of Sacramento County
- We are proposing the following projects and programs, prioritization, and design guidelines. Looking at these, is anything missing? Inaccurate?

# Stakeholder Meeting and Pop-up Summaries

## PHASE 1 STAKEHOLDER MEETINGS

### North Vineyard - January 19, 2021

#### Attendees

3 project staff, 1 project partner, and 1 community member participated in a virtual pop-up meeting through Zoom.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Anne Okafor, WALKSacramento
- Leah Barrett, 50 Corridor Transportation Management Agency
- 1 community member

#### Input Received

- Goals and Priorities
- Benefits of walking: meditative, relaxing, can enjoy social interaction with neighbors
- Bicyclists tend to be the most vocal group, so ensure that the voices of people who walk and use other forms of active transportation are heard through this process as well

(particularly older adults and people with disabilities).

- Walking routes and destinations include:
  - Camden Lake Trail
  - 3-4 mile loop from Meadowhaven Drive to Tillotson Parkway and back around to Spengler Drive

#### Challenges

- The biggest concern is the interaction between pedestrians and bicyclists on shared paths and trails. Bicyclists often move fast and don't slow down for pedestrians, creating concerns for collisions.
- Bikes often use sidewalks instead of bike lanes, which forces pedestrians into the street.
- Lack of signage indicating shared streets for bikes and cars.
- Lots of high speed arterials and wide streets in the Vineyard area that make walking and biking uncomfortable, such as Gerber Road, Elk Grove Florin Road, and Bradshaw Road.

- It doesn't feel safe or practical to use a bike in the Vineyard area. The participant shared a memory of growing up in a small town in Iowa where most people biked for recreation or other trips, and it felt safe because everyone knew each other and people who drove would be very slow and careful around their neighbors. Biking is more challenging in Sacramento because cars move too fast and recklessly and there aren't enough other people out biking to make it feel safe.
- Specific areas of concern:
  - Meadowhaven Drive is wide enough for bikes and cars, but bikes often prefer to use the separated sidewalk instead which creates concerns for conflicts with pedestrians.
  - Neighborhood off of Bradshaw and Gerber has no marked bike lanes, and cars parked along the sides make the streets feel cramped to bike through.

## Opportunities

- Designated walking trails would be preferred over shared walking and biking paths. Overall, keeping pedestrian and bicycle infrastructure separate is ideal.
- Four way stop signs force cars and bikes to slow down and makes it safer for people of all modes. The participant indicated the City of Davis as a model to follow.
- Reach out to older adults through senior centers (such as the Elk Grove senior center)
- There are a lot of Asian community members in Vineyard who walk (particularly older adults), so it would be great to connect with them through this process.
- Camden Lake is a popular weekend recreational destination and may be a good opportunity for tabling and sharing more information about the Plan.

## Sacramento County Disability Advisory Committee – July 21, 2020

### Attendees

12 people participated via virtual Skype meeting (including Mikki McDaniel)

### Input Received

### Goals and Priorities

People with disabilities should specifically be mentioned in the goals.

### Public Engagement Plan

- Add GLBTQ organizations and organizations addressing homelessness. Include Sacramento Self Help Housing.
- Add indigenous peoples' groups: Sacramento Native American Health Center, California Indian Heritage Commission, California Native American Legacy, and California Indian Health Services.

## Challenges

- Combining bicycles and pedestrians into one plan can lead to pedestrian needs getting lost.
- Accessibility needs to be defined in the plan. Accessibility in the disabled rights world means something different than in the transportation world.
- Curb ramps to existing, private driveways are not meeting cross slope standards. A wheelchair user can and has fallen due to the unmanageable and substandard cross slopes at driveways on Watt Avenue.
- Auburn Blvd – full length of street. The sidewalk condition is very poor and traffic moves at highway speed.
- Watt Avenue – A hand-powered cyclist (using a wheelchair modified to also be used with a hand crank) said that he does not like to use bicycle lanes and chooses to use the sidewalk on Watt because of the speed of traffic.

- E-bike riders face a lot of challenges.
- Howe Avenue - Cars on Howe are pulling out beyond limit lines because of blind spots.
- Dell Avenue and Mission Avenue were cited as challenging places to walk and bike.
- The transition from the El Camino Park District to the American River is difficult.
- Difficult Route in Arden: Northrup Ave to Bell Ave to Irma Way

### Opportunities

- Disabled cyclists needs should be addressed.
- Meetings should be noticed such that anyone has the ability to access accommodations and provide them if requested. Accommodations should be made per the individual request, i.e. the format requested according to ADA.

- Wheelchair users differ on the use of "walk" versus "roll". However, "walk" should be defined in the plan to refer to people who both walk and roll (using a wheelchair) or both terms should be used.
- Diverters along bike lanes and transitional curbing are also helpful for people on the sidewalk as it provides more separation from traffic.
- Buffered bike lanes help low-riding bicyclists (i.e. recumbent or adaptive bicycles).
- Empowerment Park is a good example of how to build a facility. The park has curb ramps and accessible recreational equipment. People should be able to bike and walk to this park.
- The Los Rios School District did a transportation study that is old now, but could provide good information.

### Survey and Website Feedback

- Survey - The survey should be made to be fully accessible. Readers that are used to build the site are not always reflective of a typical user's experience using an accessibility reader.
- Website
  - o The website is not fully readable by an accessibility reader and should be. The interactive map is not useable at all by an accessibility reader. It is good that a project email and a phone number are posted in order to provide other ways to provide input.
  - o Captioning should be made for deaf and blind (for use by accessibility readers) in any videos.
  - o Any outreach collateral should be in Braille and large print.

- o Providing captioning or an interpreter for meetings, regardless of whether accommodation has been requested, could be a nice gesture to the Deaf community.

### Questions From Attendees

- How do you interact with the City of Sacramento/American River Parkway, Rancho Cordova on the plan?
- Why are we combining bicycles and pedestrians? Pedestrian needs can get lost in the shuffle.

### City of Rancho Cordova - August 27, 2020

#### Attendees

- 7 people participated via virtual Zoom meeting
- Byron Tang, City of Rancho Cordova
- Brian Chan, City of Rancho Cordova
- A Swanson, City of Rancho Cordova

- Edgar Medina, City of Rancho Cordova
- Quoc Nham, City of Rancho Cordova
- Rick Carter, Sacramento County Department of Transportation
- Mikki McDaniel, Sacramento County Department of Transportation

### Input Received

#### Challenging Locations for Walking and Biking

- Douglas Rd, west of Folsom South Canal to Zinfandel Dr
  - o This is a gateway path for cyclists. We would like a paved shoulder be six feet wide.
  - o Can it be added to CIP and a project plan?
- Folsom South Canal connection at Kiefer Blvd
  - o This is a connection to Keifer and New Bridge Plan Area.

- o Sidewalks are needed east of the Kiefer/Folsom South Canal entrance.
- Old Placerville Road, east of Bradview Dr.
  - o Add sidewalks
- Sunrise Blvd, north of S. Bridge St.
  - o There are a lack of sidewalks on South Bridge east of Sunrise. There is a Class I trail, but there could also be a sidewalk.
- Rod Beaudry, north of Tiffany Lane
  - o Would like separation from the road for pedestrians, like an AC trail.
- White Rock Road.
  - o There is a bicycle lane gap from the end of the City to Grant Line Road

City of Rancho Cordova does not have a Bicycle Advisory Committee. There is an organization called Bicycle Advocates of Rancho Cordova.

## Sacramento Regional Transit Bus Stop Group – September 24, 2020

### Attendees

- 12 people participated via virtual Microsoft Teams meeting
- SacRT staff: Sarah Kerber, Mike Fitzpatrick, Sarah Poe, Max West, Blanca Salcedo, Aimee Steele, Eric Oparko, CTyler, EReitz, Desi Lopez, Sherri Adams, and RNIelson.
- SacDOT staff included Mikki McDaniel and Kevin Tan.

### Input Received

#### Challenges

- Reaching a bus stop at Madison & Dewey is difficult. Comment was posted on the public input map at walkbikesaccounty.net.
- Bus stop on Folsom at Bradshaw is almost impossible to reach. DOT is already planning to remove.

### Opportunities

- Eric Oparko expressed a desire for RT to be able to give DOT input on bus stop pads for shorter term DOT planning
- RT has received a grant to survey walking area around bus stops. They will work with WalkSacramento.

### Survey and Website Feedback

- Seemed like there was an issue with viewing comments on receiving end
- Overall was enthusiastic about the website and its opportunity to highlight infrastructure.

### Questions From Attendees

- How do all the ADA, ATP, Bike, and Pedestrian Plans mesh with each other?
- What is the timing of the bus stop removal on Folsom just west of Bradshaw?

## Sacramento Regional Transit Mobility Advisory Council – October 1, 2020

### Attendees

26 people participated by Microsoft Teams.

- Council Members: Chair Pam Flohr, Vice Chair Jeff Thom, April Wick, Eugene Lozano, Helen O'Connell, William Charles Johnson, Linda Berry, Patti Johnson, and Alan Ruzich
- SacRT Staff: Carmen Alba, Rose Patton, Charity Oakley, Sarah Kerber, Dan Thao, Kathy Sachen, James Drake, Craig Norman, Chris Florez, Jamie Poole-Canevari, Wendy Melton, and Andrea Williams-Garcia.
- Guests: Mikki McDaniel, Frank Trullio, Roger Oberholzer, Jeff Tardaguila, Mike Barnbaum.

## Input Received

SacRT Mobility Advisory Council is made up of seniors and disabled community members who advise the SacRT Board on mobility and accessibility issues.

## Experiences

- I needed to be on guard when using the Watt I-80 elevator – dirty.
- At a mid-block crossing on Orange Grove about one fourth mile from the Orange Grove and Auburn intersection, it is hazardous to cross the street. There is the choice to cross mid-block at Pasadena where there is no signal, but there needs to be one. I get cut off by college student drivers turning right and have once been struck by a cyclist [as a pedestrian].
- Bicycles and scooters are not supposed to be on the sidewalk. They are especially hazardous if you have hearing loss. Dogs on leash can also cause a pedestrian to fall. The

presence of homeless people make seniors feel very vulnerable.

- Benches have been removed in many public places. Older people can't stop and rest. This is alarming to me. Don't take them all out.
- There is no sidewalk on Florin Perkins north of Belvedere to Jackson Highway to reach the light rail station on the western side. [This location is in the City of Sacramento.]

## Challenging Locations for Walking and Biking

- Fair Oaks and Howe Avenue
- Sierra Boulevard between Howe and Fulton near the Unitarian Church. There is no sidewalk between the bus stop and the church so you have to walk in the street. Need to complete the sidewalk.
- Crossing streets where there are railroad tracks.
- Fire hydrants in the middle of sidewalks.

## Other Input on Engagement

- Cheryl Bennett and April Wick offered to provide additional contact information for NorCal Deaf Association.
- The online survey should be made to be fully accessible.
- The web map could have had boxes to be able to be more accessible.
- Alta has an interactive survey, but it needs to be tested by screen readers.
- DAC/ECOS/DOT did a walk evaluation 15 years ago on Sierra Boulevard from Howe to Watt Avenue that could be useful.
- Gene Lozano can find a volunteer to test for screen readability.

## City of Citrus Heights – October 13, 2020

### Attendees

- 4 people participated via virtual Zoom meeting
- Casey Kempenaar, City of Citrus Heights
- Leslie Blomquist, City of Citrus Heights
- Rick Carter, Sacramento County Department of Transportation
- Mikki McDaniel, Sacramento County Department of Transportation

### Input Received

- West Arcade Trail – Creek Corridor Feasibility Study is coming up. Orangevale Recreation and Park will be participating. The alternate scenario is for the trail not to go through the County and to instead, follow the County line.

- Electric Green way stops at Wachtell just south of Titalo Way
- Discussed the four agency multi-connector feasibility study. City will pursue a grant for a feasibility study with a County local match.
- Emails sent prior to the meeting coordinating on bikeways and walkways, including a detailed description of the four agency multi-connector feasibility study, are attached.

## Sacramento County Disability Advisory Commission – Physical Access Subcommittee – November 17, 2020

**Members Present:** Gene Lozano, Chair; Bill Fallai, Patty Gainer, Scott Harger, Randy Hicks, Carol Moss, LaTasha Richardson, Jeff Tardaguila

**Members Absent:** None

**Guests** Mikki McDaniel, Department of Transportation

**Staff:** Cori Stillson and Cheryl Bennett, Disability Compliance Office (DCO)

### Update – Active Transportation Plan (ATP)

Mikki McDaniel provided an overview of the ATP Public Engagement process which included 30 stakeholder groups. She summarized the community input obtained through public meetings and surveys. It was noted that there were many comments from the community at large that were similar to those provided by the Subcommittee. Some common themes were speed enforcement, path of travel to public transit, bike parking, street cleaning, connection to services, and sidewalk continuity. Members discussed and debated various access barriers often encountered with shared bike/pedestrian spaces and shared experiences with specific local intersections or neighborhoods. Ms. McDaniel thanked the Subcommittee for their input and pledged to return with further updates in Spring 2021.

## Sacramento County Disability Advisory Commission - Physical Access Subcommittee - December 15, 2020

### Attendees

26 people participated.

**Members Present:** Gene Lozano, Chair; Bill Fallai, Patty Gainer, Scott Harger, Randy Hicks, Carol Moss, LaTasha Richardson, Jeff Tardaguila

**Members Absent:** None

**Guests** Mikki McDaniel, Department of Transportation

**Staff:** Cori Stillson and Cheryl Bennett, Disability Compliance Office (DCO)

Staff provided an update on public engagement so far for the Active Transportation Plan update.

Mikki McDaniel provided an overview of the ATP Public Engagement process which included 30 stakeholder groups. She summarized the community input

obtained through public meetings and surveys. It was noted that there were many comments from the community at large that were similar to those provided by the Subcommittee. Some common themes were speed enforcement, path of travel to public transit, bike parking, street cleaning, connection to services, and sidewalk continuity. Members discussed and debated various access barriers often encountered with shared bike/pedestrian spaces and shared experiences with specific local intersections or neighborhoods. Ms. McDaniel thanked the Subcommittee for their input and pledged to return with further updates in Spring 2021.

### Input Received

Does the County have a policy on Class IV bikeways? Can emergency vehicles and paratransit vehicles still load and unload passengers curbside where there are Class IV bike facilities?

The County needs a policy on Class IV bikeways. There should be a policy in place that specifically allows loading and unloading of passengers for emergency vehicles and paratransit vehicles, regardless of other motor vehicle prohibition, within a Class IV bikeway.

## Arden-Arcade/International Rescue Committee - December 29, 2020

### Attendees

3 project staff, 3 project partners, and 11 community members participated in a virtual pop-up meeting through Zoom. The meeting was conducted in both English and Farsi.

- Kiara Reed, WALKSacramento
- Molly Wagner, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Margeaux Fischer, IRC
- Yassaman Vedad, IRC
- Chali Temple, IRC
- 11 community members

## Input Received

### Goals and Priorities

- Prioritize safe routes to parks, especially for young families.
- Prioritize safety of women and young children.
- Educational programming catered towards new immigrants to the U.S. that focuses on pedestrian and cyclist safety and bicycle maintenance.
- Increase overall engagement with immigrant communities.

### Challenges

- Many people are walking less than before due to Covid-related health and safety concerns.
- Recent immigrants to the United States find it challenging to understand or learn pedestrian etiquette and safety.

- Missing sidewalk segments, lack of lighting, and fast-moving traffic create an unwelcoming and unsafe environment for pedestrians and cyclists.
- Long distances to popular destinations make walking and biking unrealistic, especially for young families.
- Allowing children to play in the street is a cultural norm in the Afghan community, however, American drivers do not expect this, making it dangerous for both drivers and young pedestrians.

### Opportunities

- Culturally sensitive educational programs and campaigns related to pedestrian and cyclist safety for walkers, bikers, and drivers.
- Partnerships with bike advocacy organizations to organize and provide classes for those who wish to learn more about cycling, including how to ride a bike and bike maintenance.

- Wayfinding available in multiple languages to help a wider variety of people feel more confident and safe when travelling to their destination.
- Infrastructure improvements, such as wider sidewalks and dedicated bike lanes, to encourage walking, biking, and rolling.
- Improving connections between transit and cyclist and pedestrian networks.

## South Sacramento - January 14, 2021

### Attendees

4 project staff, 3 project partners, and 21 community members participated in a virtual pop-up meeting through Zoom. The meeting was conducted in both English and Spanish.

- Mikki McDaniel, Sacramento County Department of Transportation
- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento

- Anne Okafor, WALKSacramento
- Nahdxyeli Valdez, La Familia
- Marissa Reyes, La Familia
- Maria Cruz, La Familia
- 21 community members

## Input Received

### Goals and Priorities

- "Comfort" means feeling safe and secure and being able to move freely wherever people want to go.
- "Safety" means:
  - A lack of danger and being able to do things without getting hurt.
  - Having no risk when exercising or walking. Not having to be on your guard to avoid hazards.
  - No loose aggressive dogs.
  - Barriers to protect from automobiles and not having to worry about a car hitting you when crossing the street.
- Good lighting and enough foot traffic to prevent crime.
- Favorite forms of active transportation include walking, biking, and scootering. People often use active transportation to get to transit as well.
- Favorite destinations for active transportation include schools and parks. Specific destinations include:
  - Old Sacramento (favorite way to get there is to go under the pedestrian bridge and out to the river trail)
  - Walking and biking in the delta
  - Shasta Park and Echo Park in Elk Grove
- Prior to the pandemic, people used to walk, bike, or roll between 3-5 times per week, primarily for work and to drop off/pick up students from school. During the pandemic, people are using active transportation less because of shelter in place.

- Generally, active transportation is seen as a great way to relieve stress, interact with friends and neighbors, and go out to places like parks.

### Challenges

- Places are far away
- Biking is a lot of work
- Hot and rainy weather discourages active travel
- Health and safety concerns during the pandemic
- Traffic safety – cars don't respect pedestrians
- Personal safety – usually people in the neighborhood are friendly but sometimes they aren't
- Lack of lighting, especially in the evening when the chance of being hit by a car increases
- Lack of curb cuts and smooth sidewalks

- Bike lanes often don't feel safe because they are narrow and have debris such as broken glass. One participant shared that biking is her only method of transportation to work, and broken glass in the bike lane creates concerns about popped tires. Additionally, because bike lanes are narrow and close to fast traffic, many people use the sidewalks instead. However, sidewalks also tend to be bumpy and create an uncomfortable ride.

### Sacramento County Agencies - September 22, 2021

#### Attendees

Four people participated in a virtual focus group conversation through Zoom.

- Victoria Cacciatore, SACOG
- Tim Choi, Sac County Department of Human Assistance

- Cheryl Bennett, representing the Disability Compliance Office and Disability Advisory Commission
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento
- Mikki McDaniel, SacDOT

### Input Received

#### Goals and Priorities

- Make sure that an ATP fits in with the context and supports other initiatives. Look at where people go within a two-week period.
- Access to jobs and job interviews.
- Provide bikes for people and linking them to major volunteer or service provider destinations.
- Safe crossings for people using mobility devices that includes clear marking, ramp, no dedicated turn

lanes, straight not diagonal crossing, and longer walk times.

- Think about families and their use of sidewalks and refuge islands.

### Challenges

- Continuous access is really difficult in the county for medical services.
- Service delivery model for assistance does no good if people can't access healthy foods or farmers markets.
- People aren't able to get to the places they need to go to.
- Unsafe crossings.
- Bicycles sharing space with pedestrians is a danger to people with disabilities or impairments.
- More uniform bike lane design.
- Prioritize bicycling as transportation; or identify streets as either bike friendly or not.

- Really wide intersections.
- Specific locations of concern:
  - Stockton Blvd and Florin Road are dangerous for walking and biking
  - Long stretches between crossings in north areas.
  - Bell and Arden: crossings to school.

### Opportunities

- Work with Black Child Legacy Campaign, WIC, and other clusters of services.
- BCLC would be great for spreading the survey.
- Pop-up projects.
- SACOG TOD toolkit has transit stations in Sac County that would be useful to examine in how it could support initiatives. Butterfield station has been identified for short-term opportunities

### Foothill Ranch Middle School – November 4, 2020

#### Attendees

19 people participated in a virtual focus group conversation through Zoom, including 10 Foothill Ranch students, 5 after-school program staff, and 4 project team members.

#### Project Team:

- Mikki McDaniel, Sacramento County Department of Transportation
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento
- Anne Okafor, WALKSacramento

### Input Received

#### Goals and Priorities

- Benefits to walking, biking, and rolling:
  - See and meet people
  - Good for exercise and health
  - Less pollution in the air

- Helps clear the mind
- Not everyone has a car

### Challenges

- Personal safety is a concern when walking in the neighborhood.
- Lack of lighting, narrow sidewalks, and litter create an uncomfortable walking experience.
- Specific areas of concern:
  - Hillsdale Boulevard has a lot of fast traffic that makes it feel unsafe for walking and biking.
  - Cars drive fast along Diablo Drive and do not yield to pedestrians trying to cross.
  - Locations that were specified as walking and biking destinations included Robert Frost Park, La Superior Mercado, and Dollar General.

## Opportunities

- Students often use active transportation to go to parks, stores, and restaurants. Connectivity to these locations is critical.
- Want to have more greenery in the neighborhood and along routes.

### Fern Bacon Middle School – November 2, 2020

#### Attendees

17 people participated in a virtual focus group conversation through Zoom.

Fern Bacon Middle School Staff:

- Monica Ramos

Project Team:

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Kiara Reed, WALKSacramento

## Input Received

### Goals and Priorities

- Frequent destinations that students mentioned travelling to included parks, the Splash Aquarium, convenient stores, and friends' houses. Access to these locations should be prioritized, with special attention to youth safety and comfort.
- Walking, running, and biking were expressed as preferred active transportation methods.

### Challenges

- Streets adjacent to Fern Bacon Middle School appear to be hot spots for vehicular and pedestrian accidents. Several students reported being personally involved in crashes or knowing friends and family who had been involved in crashes along Franklin Boulevard and Florin Road.

- Longer distances to certain destinations was mentioned as an obstacle to using various modes of active transportation more frequently.
- Poorly maintained roads caused issues for bicycle maintenance (i.e., popped tires), placing cost burdens for repairs on youth.
- Specific areas of concern:
  - Florin Road (especially near where the Light Rail intersects with Florin)
  - Franklin Boulevard (especially in front of Bowling Green Elementary School)

### Opportunities

- Providing more shade (i.e., street trees) along popular routes could encourage students to walk more frequently, especially during hotter times of the year.

- Adding traffic calming and/or enforcement measures, such as traffic light cameras, offer opportunities to promote safety for students and families around Fern Bacon Middle School.

### Aging Adults - AARP - December 3, 2020

#### Attendees

4 project staff, 1 project partner, and 22 community members participated in a virtual pop-up meeting through Zoom.

- Mikki McDaniel, Sacramento County Department of Transportation
- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Anne Okafor, WALKSacramento
- Jennifer Berdugo, AARP
- 22 community members

### Input Received

#### Goals and Priorities

- Prioritize infrastructure that helps reduce speeds in and around residential neighborhoods.
- Prioritize safe routes to parks, trails and essential destinations.
- Prioritize safety of aging populations and persons with disabilities who may use walkers and wheelchairs.
- Prioritize improvements in all areas particularly outside of the midtown and the downtown core.

#### Challenges

- When biking and walking there are a lot of blind spots that make it dangerous.
- Wet leaves in dedicated bike lanes make it unsafe for bicyclists.
- Bike lane widths are not wide enough, are incomplete or simply do not exist.

- Biking and walking is not always safe, especially at night and current infrastructure doesn't support walking and biking.
- Wheelchair ramps are broken, inconsistent and worn out.
- Without sidewalks, using a walker is difficult and unsafe.

#### Opportunities

- Infrastructure improvements, especially around visibility and wayfinding.
- Prioritize infrastructure improvements like wider sidewalks and dedicated bike lanes, to encourage walking, biking, and rolling in areas that currently prioritize vehicles.
- Utilize Barcodes or QR codes where you can click and access maps.

## Disability – Resources for Independent Living – October 23, 2020

### Attendees

8 people participated in a virtual focus group conversation through Zoom.

- Nicholas Lanphear, Resources for Independent Living
- April Wick, Resources for Independent Living
- Tony Vi, Resources for Independent Living
- Kaelea Luca, Resources for Independent Living
- Angelina Guerrero, Resources for Independent Living
- Helen O'Connell, Resources for Independent Living
- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento

## Input Received

### Goals and Priorities

- Prioritize access to the following locations by increasing connectivity between pedestrian, bus, light rail, and cyclist networks: grocery stores, hospitals/medical offices, schools, and job centers.
- Improve access to outdoor recreational opportunities, particularly trails and parks, by consistently providing 110 outlets for those who use electrically powered mobility devices.

### Challenges

- COVID-19 Challenges
  - Bikeshare (Jump Bikes) was not available for a period of time during the pandemic.
- Poorly maintained sidewalks and roads make cycling, walking, and rolling dangerous, especially along busy roadways.

- Many bus stops do not have elevated sidewalks, which increases the incline of the wheelchair ramp from the bus to the street and creates unsafe conditions for wheelchair users.
- There is a disconnect between job centers and public transportation/active transportation networks (i.e., jobs in the food service industry in Natomas difficult to access without a car)
- Specific areas of concern:
  - Along Jackson Road: no sidewalk—dangerous for walking
  - Between Sacramento City College and Hiram Johnson High School: unmaintained, narrow dedicated bike lane shared with parked cars, runs parallel to busy roadway, aggressive drivers—dangerous for cycling
  - Harlin Drive around the Applied Behavior Consultants (ABC) School: no sidewalks or bus stops

- dangerous for walking, difficult to access
- o Between Power Inn and Rancho Cordova: no sidewalks—dangerous for walking
- o 14th Avenue from Sutter to 65th Street: Narrow road with busy traffic, unprotected bike lane - dangerous for cycling
- o Florin Road: sidewalk gaps, difficult surfaces (i.e., gravel) to walk on - dangerous for walking, rolling, biking
- o 47th Avenue: There are sidewalk gaps that prevent access to bus stops
- o Thornhill Drive: no bicycle facilities, dangerous for cycling (especially at night)

### Opportunities

- Think creatively about promoting access to alternatives of key destinations. For instance,

emphasizing access to local farmers' markets can improve access to healthy food for those who are located further away from grocery stores.

- Connecting active transportation networks to public transportation networks, particularly addressing first/last mile gaps to light rail stations and bus stops, was identified as a priority. Micro mobility modes (i.e., bike share and scooters) appear to be frequently used to access transit.

### Greater Sacramento Area Park Managers Meeting - March 18, 2020

#### Attendees

3 people and 1 County staff person participated via virtual Zoom meeting. (Not all participant names were recorded.)

Liz Bellas, Sacramento County Regional Parks

Mike Heller, Rio Linda Elverta Parks

Cristina James, Cordova Recreation and Parks

Mikki McDaniel, Sacramento County Department of Transportation

Staff presented on the Active Transportation Plan schedule, outreach, and analysis. Some key points from the analysis include:

- Concurrent with outreach, our consulting team, Alta and DKS Associates, have been performing analysis to figure out where we need to improve bicycle and pedestrian facilities. Their analysis includes origin/destination, safety, equity, and level of stress.

- **The bicycle network is inconsistent** across the County. Some communities have dense networks and other areas have few facilities.

- There are **limited regional connections** between incorporated and unincorporated County

- Many trips **less than 5 miles** occur in the northern part of the County. Most areas of the County are projected to see some increases in walking and biking trips
- **Access to light rail is key** because most current and future jobs will be located along light rail lines
- The highest concentrations of **population growth** are expected to occur within the master plan areas
- 55 miles of roadway (6.5% of unincorporated roads) compose the high-injury network
- Many designated bikeways are **high-stress for people biking**. Most arterial and collector streets are also **high-stress for people walking**

Staff discussed how the plan can help Sacramento Area parks for their districts' projects. Invited park districts to the May workshops.

### Input Received

- No input received.

### City of Elk Grove - February 8, 2020

#### Attendees

3 people participated via virtual Zoom meeting

Kevin Bewsey, City of Elk Grove

Carrie Whitlock, City of Elk Grove

Mikki McDaniel, Sacramento County Department of Transportation

#### Input Received

Discussed Elk Grove-unincorporated County bike and ped issues, including:

- Laguna Creek Trail has several alignments west of Franklin Boulevard and south of Cosumnes River Boulevard, depending of whose plan you are looking for between the City of Elk Grove, City of Sacramento, and County of Sacramento. The City of Elk Grove has a grant to look at this and do more planning.

- Overlap in planning with different proposed facilities for Grant Line Road and Kammerer Road.
- Class 1, 2, 3 connections across Calvine Road and considering EGUSD boundaries do not align with City Limits
- Consider adding a priority to the County's plan, to inform Elk Grove planning efforts.

County requested GIS or a map for Laguna Creek Trail that Elk Grove is using, and any proposed connections across Calvine Road.

#### Meeting Follow-up

Mikki McDaniel sent the City the adopted Ped and Bicycle Master Plan GIS for the County as well as responses below on February 10, 2021.

- Laguna Creek Trail alignment - County adopted BMP (pdf) show an existing Class II along Franklin and proposed Class II along Cosumnes

River Blvd west of Franklin in the pdf of the plan.

- Crossings over Calvine Road proposed in County adopted Bicycle Master Plan include a Class I crossing in between the high schools east of Kingsbridge; and another Class I crossing along UPRR.
- County mapping shows a proposed Class II on Kammerer from Bruceville to Grant Line/Cosumnes River Blvd.

## Health Organizations - September 22, 2021

### Attendees

6 people participated in a virtual focus group conversation through Zoom.

- Stacy Springer, Breathe CA
- Misael Chavarin, UC Davis Trauma Prevention Center
- Roxana Garcia-Ochoa, Health Education Council (HEC)
- Monica Alleje, American Heart Association (AHA)

- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento

## Input Received

### Goals and Priorities

- Need to consider first and last mile connections between various modes.
- A Complete Streets policy would be valuable in order to ensure a holistic approach to transportation and access.
- Signage and wayfinding are important amenities to provide connectivity to trails and safe pedestrian and bicycle routes.
- Lighting is critical for personal safety.
- Shading for trails and streets improves comfort as well when walking and biking.

- Breathe sees potential for the Plan to help improve air quality through reduced VMT.
- UCD is interested in seeing if there has been a spike in pedestrian and bicycle injuries in recent years, and is particularly interested in analyzing injury data trends around e-bikes and scooters.

### Challenges

- COVID-19 challenges:
  - It has been challenging to successfully engage with people on-the-ground. Programs such as Breathe's Community Carshare and HEC's Walk With Friends program have been heavily impacted because of the need to meet face-to-face with residents.

- o There is a lot of Zoom fatigue, and not everyone wants to be on Zoom calls.
    - o Programs and services have pivoted away from big events and shifted to virtual settings.
  - Access to daily destinations is a big barrier for a lot of people, particularly to grocery stores and meal pick-ups. Students who don't have reliable transportation face challenges in picking up meals at school sites, which are more set up for vehicle pick-up.
  - Lack of continuous sidewalks and crosswalks.
  - Outside of the Sacramento downtown core, there are fewer bike lanes and people tend to bike on the sidewalk. People also often don't wear helmets.
  - Shared active transportation spaces (especially with e-bikes and scooters) can lead to crashes and unsafe conditions between pedestrians and bikes.
  - Specific areas of concern:
    - o American River access on Watt Avenue: one side of the river is well lit and maintained, while the other side is not and feels more unsafe.
    - o American River access at Discovery Park: lots of personal safety concerns with people experiencing homelessness on the trail.
- Opportunities**
- Short videos have been effective for AHA in promoting messaging around health. Rather than having Zoom meetings to educate people, it could be useful to provide short videos on social media and schedule virtual meetings for direct feedback as needed.

- Work with elected official districts to get the word out about community events.
- HEC works closely with the Twin Rivers Unified School District in North Sacramento and can support sharing information about the survey and workshops.

### Phase 1 Workshop Summaries – November 10, 2020

#### Attendees

##### Project Team Staff

- Mikki McDaniel, Sacramento County Department of Transportation
- Otto Melara, Alta Planning
- Libby Nachman, Alta Planning
- Kiara Reed, WALKSacramento
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento

- Jordan Grimaldi, WALKSacramento
- Anne Okafor, WALKSacramento
- Julissa Rocha, Languages 4 You

#### Afternoon Session 12:00 – 1:30pm

- Zoom: 48 participants, including 9 project team staff
- Facebook Live: 15 participants

#### Evening Session 6:00–7:30pm

- Zoom: 28 participants, including 9 project team staff
- Facebook: 14 participants

#### Workshop Summary

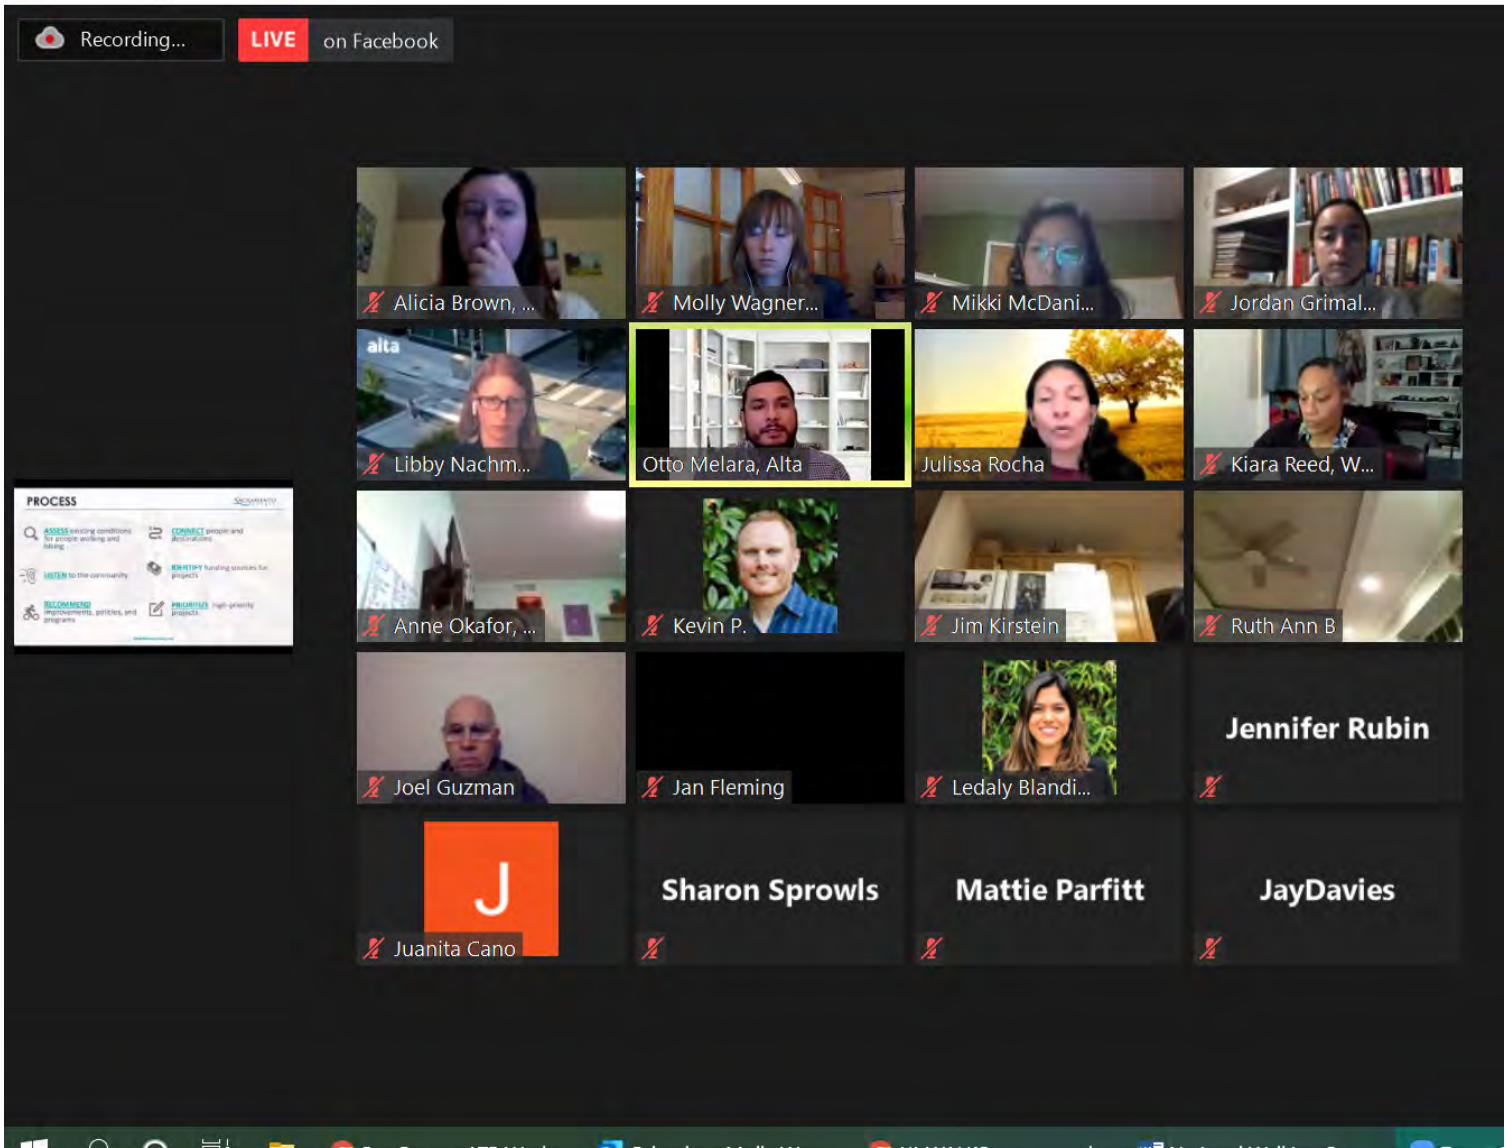

Two workshops were held on Tuesday, November 10th for the Sacramento County Active Transportation Plan. The goal of the workshops were to increase awareness of the Active Transportation Plan, understand overarching concerns for walking, biking, and rolling, and

understand location-specific challenges and opportunities. The workshops began with a presentation about the Active Transportation Plan, with online polls and question and answer interspersed throughout. Simultaneous Spanish translation was provided for both of the workshops.

#### Input Received

##### Goals and Priorities

- Improving safety and improving access to destinations were the top-rated priorities for both the afternoon and evening workshops.
- Improve safety for everyone, especially people walking and bicycling.
- Develop more connected bicycle and sidewalk networks.
- Increase access to parks, schools, and other community destinations.
- Make walking and bicycling more comfortable.
- Improving access and connections is the foundation of a safe transportation network.
- Educate bike riders to ride in the same direction as auto traffic.
- Educate drivers about being more aware of people walking, biking, and rolling.
- Increase signage on bike trails and roads.
- Reduce speed limits through design, such as reducing vehicle lane widths and eliminating one-way streets.
- Be mindful of the needs of cane users and people with mobility, vision, and hearing disabilities.
- Transportation issues must be intersectional and center the voices and experiences of BIPOC.
- Create safer connectivity to transit.

Workshop 1 participants

Fall Workshop Afternoon Session (11/20/2020). 49 respondents

Fall Workshop Evening Session (11/20/2020). 13 respondents.

## Challenges

- Residents generally don't feel safe biking, walking and rolling.
- If bikes and pedestrians don't have alternate connection options, they get funneled into the same transportation corridors with cars, which is inherently less safe.
- As far as sidewalk maintenance goes, many miles of sidewalks are hazardous for pedestrians and wheelchair users.
- Bikers tend to ride against traffic, which is more dangerous than riding with traffic. With the proper infrastructure, this could make biking with traffic feel safer.
- There are a lot of freeway off/on ramps in this community that can create obstacles for folks walking and biking.
- Specific areas of concern:
  - More all-way stop signs and crosswalks leading to river trails, especially at Maine Avenue, Dredger, and Winding Oak.
  - Need more buffered bike lanes on busy streets, such as Franklin Boulevard in Elk Grove.
  - Missing sidewalk segments on Marconi between Ashbourne and Morse.
  - There is not a safe way to cross from Fair Oaks onto Morse without going against traffic, which is very dangerous.
  - Carmichael has several street arteries with minimal sidewalks and utility poles that make it difficult to walk and bike.
  - Jackson Highway has little or no shoulder for biking making it dangerous for bikers and also frustrating for motorists trying to pass. Widening the road to make space for bicyclists is ideal.

- Frontage streets, such as along the south side of El Camino Avenue between Bell and Howe, are dangerous and difficult for pedestrians to maneuver.

## Opportunities

- Data and policy opportunities:
  - Look into the county's ADA transition plan recommendations for inclusion into the ATP.
  - Get involved in the Caltrans Active Transportation Plan for District 3 to coordinate around freeway ramps and overpasses.
  - Use data sources such as Strava Metro and other Mobility Crowd Sources to capture a larger audience of where people are biking, and to see what connections would be most useful.
  - Map pedestrian and bicycle injuries and related citations for the County.

- Prioritize funding for pedestrian and bicycle projects.
- Coordinate with city plans, such as City of Sacramento.
- Work with utility agencies to underground utilities.
- Design opportunities:
  - Put up speed limit signs at closer intervals to improve driver awareness and enforceability.
  - More arrows indicating correct walking and biking directions on trails.
- Outreach opportunities:
  - Engage with schools, parent groups, business districts, climate change and biking organizations (SABA, 350 Sac, Sacramento Bicycle Kitchen, Bicycle Advocates of Rancho Cordova, etc), college and high school students, senior living communities, and faith communities.

- Utilize Next Door, apartment complex newsletters, and other local communication networks.
- Conduct intercept interviews at grocery stores, transit stops, and farmers markets.
- Coordinate with utility districts and SacRT to share information.
- Put informational signage at dangerous intersections.
- Ensure that the online map is in a mobile-friendly format.

### Key Questions from Attendees

- Data
  - Are there data (police) available to study and to think about possible improvement recommendations?
  - Is there any comprehensive data, for Sacramento County, on walkability, sidewalk conditions, bike lanes, or pathways for no vehicle transportation?

- Have the bike/ped injuries and related citations been mapped for our county?
- Where do we find the results of your current assessment of existing conditions?
- Safety + Security
  - Are there any measures to reduce vehicle speed on residential streets (i.e. traffic calming)?
  - I had yet another bike (with a good lock) stolen this year from a secure location. This is a serious problem in our area. What can we do about it as part of this plan?
  - Are there any plans in place for better street cleaning to reduce impacts on cyclists?
  - How do you plan on keeping people safe who are not in cars?
  - How does the plan address improvements that intend to make women feel more comfortable and encouraged to ride?

- o What does “comfortable” mean?
- Plan + Process
  - o What influence do we have upon our desires?
  - o What are the long-term strategies for maintaining any new infrastructure as well as the old?
  - o Are there any education and outreach programs to elementary schools promoting bike to school and walk to school?
  - o How does the county's plan mesh with the work being done in some of our cities (e.g., the City of Sacramento)?
  - o I understand that County is considering joining the Age Friendly Network. Will you build in those considerations into the plan?
- System Connectivity
  - o How soon can we connect all schools with bike lanes, especially in regards to crossing Arden and Alta Arden?
- o What is being done regionally to connect individual city bike trail systems?
- o Is there a chance Sacramento will be home to more bike boulevards, especially through downtown/ midtown?
- o What is Sacramento County doing in regards to electric vehicles?
- o I don't quite understand "connect bike lanes and sidewalks." Does this mean connecting them to each other? Improving the bike network?
- o What is your definition of “human powered” transportation? Does this include electric bicycles, electric scooters, electric skateboards, etc.?
- Funding
  - o How would the plan be funded and what is the process for building the solutions identified in an active transportation plan?
- o About sidewalk maintenance, many miles of sidewalks are hazardous for pedestrians and wheelchair users. What party is responsible and is there funding for improving sidewalks?
- Infrastructure
  - o As a bike commuter, are there plans to install more bike friendly 'trigger' buttons at stoplights?
  - o How will ongoing maintenance concerns be addressed in the plan? (e.g. repairing curbs, cleaning up glass on sidewalks or bike lanes, etc.)
  - o Are green bike lanes cost prohibitive? Would be awesome if every bike lane was painted green.

## POP-UP EVENTS

### SACOG Youth Leadership Academy - May 15, 2021

#### Attendees

2 project staff, 2 project partners, and 25 students participated in a virtual pop-up meeting through Zoom.

- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Rosie Ramos, SACOG
- Jazmin Luna, Pro Youth and Families
- 25 students

## Input Received

### Goals and Priorities

- When participating in the “dream street” activity, students shared that their ideal streets included lots of shade and vegetation, community gardens, wide walking paths separated from cyclists, more bike lanes, and better access to entertainment.
- Popular destinations that students walk or bike to included school, friends’ houses, local cafes and parks, markets, and work, and around the neighborhood.
- Safety and equity were the top two factors students indicated for prioritizing pedestrian and cyclist improvements. Several students shared their concerns and observations related to unequitable distribution of active transportation facilities throughout the county, such as the disparities between Elk Grove and South Sacramento.

## Challenges

- Time, distance, personal safety, sidewalk gaps, unmarked crossings, uneven or unmaintained pavement, and lack of lighting were major barriers when walking or biking for students.
- Bus stop siting was identified as another challenge. Students reported bus stops in their neighborhood being located at busy intersections with minimal-to-no crossing facilities, making it unsafe to access transit by foot or bike.
- At busy intersections with unmarked crossings, students reported frequently observing people running into the street to use center turn lanes as median refuge islands, resulting in several near-misses.

## Opportunities

- Overall, sidewalks and crosswalks were students' top priorities for pedestrian improvements. For bicycling improvements, students preferred shared-use paths and buffered bike lanes because they provide the highest degree of separation between cyclists and cars.
- Students had concerns related to Class II bike lanes because of the minimal separation between cyclists and drivers. They also frequently observed parked cars occupying the Class II bike lanes in their neighborhoods.
- In terms of pedestrian improvements, students had concerns about median refuge islands because they thought refuge islands might encourage people to run into traffic as they currently observe people doing. Thus, students recommended median refuge islands be paired with crosswalks and other pedestrian facilities to promote safety and discourage dangerous crossing behavior.
- Future opportunities to engage SACOG's YLA students should be explored in future project phases as the group provides a critical youth perspective and already possess background knowledge on planning and active transportation.

Where do you like to walk,  
bike, or roll to?

Which pedestrian improvements would you like in your community?

SACOG Youth Leadership Academy

## Which bicycle improvements would you like in your community?

Mentimeter

## Which pedestrian improvements do you NOT like?

Mentimeter

## Vineyard Bicycle Tune-up – May 21, 2021

### Attendees

2 project staff, 1 project partner, and 14 community members participated in an in-person pop-up event at Don and Brenda Nottoli Park in Vineyard. The pop-up was held in conjunction with a free community bicycle tune-up hosted by the 50 Corridor Transportation Management Agency.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Leah Barrett, 50 Corridor Transportation Management Agency
- 14 community members

## Input Received

### Goals and Priorities

- Overall, participants typically liked bike infrastructure with greater separation from vehicle traffic. Participants indicated a strong preference for Class I shared use paths and Class IV protected bike lanes.
- When asked about pedestrian infrastructure, participants were generally interested in improving crossings, particularly at major intersections.

### Challenges

- Cars drive fast down neighborhood streets in Vineyard.
- Calvine Road and Elk Grove Florin Road is a really dangerous intersection for pedestrians to cross because there's so much traffic.
- Biking into Elk Grove from Vineyard is difficult because there are few routes, no sidewalks, and fast-moving traffic.

- One participant mentioned not being able to bike to work because there are no bike lanes or only Class II bike lanes, which feel unsafe for biking on.
- Protected bike lanes are difficult for drivers to navigate because they make the road more narrow.

### Opportunities

- Participants indicated a need for crossing improvements and generally liked strategies such as slip-lane removal, leading pedestrian intervals and restricting right-turn movements on red lights, and rectangular flashing rapid beacons.
- Participants liked bike boulevards as a way to slow down cars in the neighborhood to make it safer for biking.
- Participants liked the proposed Class IV protected bike lanes for Howe Avenue, Watt Avenue, and other similarly busy roads.

- Participants generally liked shared-use paths because they are completely separated from cars, although there were some concerns with pedestrian and bicycle conflicts.
- Participants generally liked the proposed buffered and protected bikes lanes in North Vineyard, specifically the proposed buffered bike lane on Bradshaw.
- Participants asked whether bike bridges would be included in the Plan and indicated a desire for a bridge over the American River Trail near the Watt Avenue access point in order to get from the south side to the north side.

### Sacramento Native American Health Center – May 17, 2021

#### Attendees

2 project staff and 3 community members participated in a virtual pop-up meeting through Zoom.

- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- 3 community members

#### Input Received

#### Goals and Priorities

- As part of the “Dream Street” activity, participants shared that their ideal streets were streets where children could safely and comfortably play, featuring wide sidewalks, traffic calming elements, and lots of shade. Participants also emphasized the desire for community spaces, edible plantings, and mixed-use development that makes it easy to access destinations by foot or bike.

- Participants’ top priorities for active transportation improvements were safety and implementation. Participants shared their experiences and observations related to long-term disinvestment from pedestrian and cyclist infrastructure in their neighborhoods as compared to higher income areas in the county. Thus, participants were eager to see improvements in their community as soon as possible.

## What priorities are most important to you?

Mentimeter

## Which pedestrian improvements would you like in your community?

Mentimeter

## Challenges

- Parents do not feel comfortable allowing their children walk or bike alone due to concerns related to personal safety and inadequate active transportation infrastructure.
- Participants felt that their communities have largely been left out of city or county-led planning efforts and, thus were somewhat skeptical of the Plan's goals to bring improvements to their neighborhoods.
- Sidewalk gaps, personal safety, and fast-moving traffic are major obstacles participants face when walking, biking, and rolling in the county. Specific areas of concern included:
  - Fast moving traffic, sidewalk gaps, and homeless encampments along Lemon Hill Avenue
  - Sidewalk gaps along 65th Street
  - Major homeless encampments and reported sex work south of Stockton Boulevard and Lawrence Drive

## Opportunities

- Participants felt that their community would benefit from education campaigns for drivers, pedestrians, and cyclists alike to raise awareness for road safety.
- One participant is an active member of the Indigenous community in Sacramento and has direct connections to the annual Powwow, which could provide future opportunities to better engage Native-identifying residents.
- Another participant has connections to the Hmong/Lao Community Center along Lemon Hill Avenue, which could provide future opportunities to better engage the Hmong and Lao communities in Sacramento.
- Overall, participants liked all of the proposed pedestrian infrastructure improvements, particularly crosswalks, sidewalks, Rectangular Rapid Flashing Beacons, and lighting.
- Participants preferred cyclist improvements that afforded the highest degree of protection or separation from cars, such as the buffered bike lanes and separated bikeways. However, one participant had concerns related to the parking and buffered bike lanes due to potential conflict between cyclists and cars.

## Resources for Independent Living - April 28, 2021

### Attendees

2 project staff, 1 project partner, and 3 community members participated in a virtual pop-up meeting through Zoom.

- Molly Wagner, WALKSacramento
- Alicia Brown, WALKSacramento
- April Wick, Resources for Independent Living
- 3 community members

### Input Received

#### Goals and Priorities

- Make sure people with disabilities are fully integrated into the community and have the choices to get where they need to go or do what they want to do.
- Participants' "dream streets" included:
  - o More greenery

- o Protected bike lanes and crosswalks (such as pedestrian hybrid beacons)
- o Pedestrian-scale lighting
- o Sidewalks that are wide enough to accommodate restaurant seating as well as people using wheelchairs
- o Cane lanes that provide a tactical strip for canes to follow, particularly for winding trails
- o Integration of audible intros for storefronts to provide information on what the store is
- o Tactile crossing indicators, which can provide benefits to both blind and low vision and deaf and hard of hearing pedestrians

#### Challenges

- Audible signals are not integrated consistently and often get rejected due to noise complaints from neighboring residents.
- Drivers do not yield and tend to cut pedestrians off in the middle of the

street while crossing. One particular location where this consistently occurs is Florin and Amherst.

- Audible signals and push buttons are often not ADA accessible. Push buttons for different crosswalks will be located on the same pole, when they should be located parallel to the crossing so that people who are blind can walk up and align themselves to the crosswalk. Additionally, push buttons may be set back far from the curb where people using wheelchairs or mobility devices cannot reach them.
  - o An intersection where this challenge occurs is Fruitridge and Freeport. One participant mentioned that she does not cross here out of fear of being hit, although several of her students cross here to access the bus to get to community college. While this particular intersection is located in the City of Sacramento, proper push button alignment and ADA compliance should also be a priority for County intersections.

## Opportunities

- While buffered and separated bikeways along arterial streets are valuable for improving safety, project implementation should also be balanced with cost-effectiveness. Existing neighborhood streets may already provide safe alternative routes to arterials.
- Many people use Google Maps when planning bike routes, but it isn't always up-to-date with new bike infrastructure. Will this be coordinated with map companies in the future to update?
- Does the County have ADA standards for placement of push buttons at intersections? If not, some standards and guidance should be incorporated in this plan. As an example, push buttons should always be located parallel to the crossing that they are connected to.
- Some recommended improvements to crossings, particularly for people who are blind and low vision, include:
  - Tactile signals rather than audible signals to indicate when it is safe to cross. There is an assumption that if you are blind you can hear really well, but that is just not the case. This type of signal is also better for people who are deaf and hard of hearing, as well as for quieter neighborhoods.
  - In San Francisco, there is an intersection with a lever that vibrates when the walk sign is on in addition to an audible signal.
  - The UK has one of the best crossings for people who are blind and low vision – there is a plate in braille that tells the name of the intersection and a cone that spins when it's safe to cross.
- RRFBs and Pedestrian Hybrid Beacons may be challenging for people who are blind and low vision. Because cars may not yield, is there a way know when it is safe to cross?
  - More education and outreach to blindness organizations about these types of crossings may be needed for people to become familiar with this infrastructure.
- Trails for people who are blind and low vision:
  - There needs to be a better way for people who are blind or low vision to access call boxes on trails, potentially adding an audible message or geomarker for people to locate them via phone.
  - Geomarkers for trail entrances and exits are also important to know where you are and where you can get on or off the trail. Because there are no labeled or audible intersections like on a street network, it can be difficult to know how far you've gone and where you're at.

## South Sacramento La Familia – May 26, 2021

### Attendees

3 project staff, 2 project partners, and 5 community members participated in a virtual pop-up meeting through Zoom that was held in English and Spanish.

- Kiara Reed, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Nahdyexli Valdez, La Familia
- Maria Perez, La Familia
- Mikki McDaniel, Sacramento County
- 5 community members

### Input Received

#### Goals and Priorities

- As part of the “Dream Street” activity, participants shared that their ideal streets have plants and vegetation, places to ride bikes away from cars, curbs, bright green bike paths

connecting to other streets (like in downtown Sacramento), trees for shade, and sidewalks that are wide, clean, and uncracked.

- Participants’ top priority for project implementation was safety, followed by equity and connectivity.

### Challenges

- Sidewalk gaps are a major challenge, especially around schools. One participant noted missing sidewalks in the neighborhood around Will C. Wood Middle School as being a significant safety barrier.
- Lack of tree shade and urban greening within South Sacramento neighborhoods makes walking, biking, and rolling feel uncomfortable.

### Opportunities

- For pedestrian improvements, participants indicated a desire for more sidewalks (and particularly detached sidewalks with landscaped buffers), lighting, curb extensions, and crosswalks in their communities.
- For bicycle improvements, participants indicated a desire for greater separation from cars, with Class IV separated bikeways being the highest priority. Class I shared use paths and Class IIb buffered bike lanes were also improvements that participants liked.
- Pedestrian and bicycle improvements that participants were less interested in or had concerns about included median refuge islands and Class II unbuffered bike lanes. Participants did not like Class II unbuffered bike lanes because they prefer greater separation from vehicles.

## What priorities are most important to you?

Mentimeter

## Which pedestrian improvements would you like in your community?

Mentimeter

## West Arden Arcade/International Rescue Committee - April 20, 2021

### Attendees

4 project staff, 3 project partners, and 13 community members participated in a virtual pop-up meeting through Zoom that was conducted in English and Farsi.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Libby Nachman, Alta Planning + Design
- Mikki McDaniel, Sacramento County DOT
- Yasi Vedad, International Rescue Committee
- Alyssa Serrano, International Rescue Committee
- Margeaux Fischer, International Rescue Committee
- 13 community members

## Input Received

### Goals and Priorities

- Prioritize safety and connectivity in active transportation improvements.
- Prioritize access to parks, green space, and transit.

### Challenges

- Trash and poor lighting within neighborhoods in West Arden Arcade currently contribute to lack of safety while walking and biking. In particular, the Carmichael area is very dark at night and could benefit from more pedestrian-scale lighting to encourage active transportation.
- In the neighborhood around Watt Avenue and Edison Avenue, there is a lack of parks, trails, and other public green space for walking.

## Opportunities

- Overall, participants liked Class I and Class IV bike lanes due to greater separation between cars and people biking. Participants also liked pedestrian median islands as a way to make crossings feel safer.
- One participant wanted to see more lighting, street decorations, and seasonal trees and vegetation along walking and biking routes, similar to the streets from her hometown in Turkey.
- Coordinate with park districts and utility districts to improve lighting along streets and at park sites.
- Consider opportunities to increase tree canopy and urban greening in conjunction with pedestrian and bicycle improvements.

## What priorities are most important to you?

Mentimeter

West Arden Arcade/International Rescue Committee Event

## Delta Area

### Attendees

4 project staff, 1 project partner, and 2 community members participated in a virtual pop-up meeting through Zoom.

- Alicia Brown, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Otto Melara, Alta Planning + Design
- Mikki McDaniel, Sacramento County DOT
- Lindsey Liebeg, Sacramento County Fam Bureau
- 2 community members

### Input Received

#### Goals and Priorities

- Improve safety and comfort for walking, biking, and rolling in cities' main streets or commercial centers, between marinas, and between cities or towns in the unincorporated Delta region.

- Provide opportunities for recreational walking, biking, and rolling.
- Prioritize safety and connectivity in active transportation improvements

### Challenges

- Given the rural nature of the unincorporated Delta region, making trips or running errands by foot or bike is difficult due to long distances between destinations.
- Little to no streets in residential or commercial areas have sidewalks. In most places, pedestrians and cyclists must share the road with fast-moving cars, large trucks, and large farming equipment (especially during harvest season) without any physical separation. In addition, the roads are very narrow in many areas, often with no shoulder or gutter, forcing pedestrians and cyclists to be in even closer proximity to vehicular traffic. Where shoulders or gutters do exist, they are often unmaintained, resulting in weed growth and uneven surfaces that make for challenging and inaccessible terrain.
- Many roads in the Delta are very windy, which decreases visibility of pedestrians and cyclists to cars and vice versa.
- Travel between cities and town, such as between Walnut Grove and Locke, is especially dangerous because the posted speed limit increases to over 40 miles per hour and there is no separation between vehicular traffic, pedestrians, and cyclists.
- The rise in navigation apps has led to an increase in cars travelling on secondary roads, such as levee roads and Highway 160, as drivers seek to bypass traffic on major highways, such as I-5. These secondary roads are not built for heavy traffic and drivers do not respect speed limits, creating unsafe conditions for pedestrians and cyclists.
- Specific areas of concern include:
  - Levee roads in the North Delta Region (specifically in Clarksburg and Courtland)
  - The "Delta Loop"

## Opportunities

- Biking is already a popular form of travel among Delta residents, which increases the likelihood of future cyclist improvements and treatments in the area to be well-used.
- Participants were highly interested in Rectangular Rapid Flashing Beacons for crossings, as well as Class I shared-use paths for biking. Participants indicated that advisory shoulders seemed confusing for both cyclists and drivers alike, and would not be desirable without additional signage or education.
- One participant mentioned the possibility of piloting low-cost solutions, such as providing pedestrians with high-visibility flags for crossing streets, as seen in Salt Lake City, Utah.
- There is an approximately half mile segment of River Road between Locke and Walnut Grove that is often used by people walking. Safety of pedestrians would significantly benefit from the installation of sidewalks along this segment, and would encourage more active travel between the two communities.
- Local businesses rely heavily on foot traffic. Thus, partnering with local chambers of commerce, business associations, and local business owners for future engagement efforts present opportunities to stimulate the local economy and increase public participation and buy-in.
- Even though many levee roads are officially closed to the public, they are still widely used by Delta residents for recreation, such as the patrol road that runs from Oxbow Marina to Tyler Island Bridge Road. Partnering with private property owners could potentially expand opportunities for walking, biking, and rolling in the Delta, especially for facilities completely separated from vehicular traffic.
- Open space alongside main highways and thoroughfares presents opportunities for Class I side paths to promote safe and comfortable travel between cities, towns, and marinas.

## Foothill High - May 6, 2021

### Attendees

2 project staff, 1 project partner, and 19 students participated in a virtual pop-up meeting through Zoom.

- Alicia Brown, WALKSacramento
- Kiara Reed, WALKSacramento
- Andrea Villani, Foothill High Leadership Class Teacher
- 19 high school students

## Input Received

### Goals and Priorities

- When asked to share their ideal “dream street”, students indicated that they would like to have elote carts, slushies, popcorn, ice cream, an anime store, and more trees.
- Students’ favorite places to walk, bike, and roll to included parks, friends’ houses, restaurants and food stores, trails, schools, and around the block in their neighborhoods.
- Overall, students’ top priorities are for infrastructure projects that have the greatest safety, comfort, and community need.

### Challenges

- Personal safety was identified as a major challenge for walking, biking, and rolling in the neighborhood, especially for women. Getting lost was also a concern.
- Heat and weather conditions was another factor for students in whether or not they feel comfortable using active transportation. A lack

of shade trees in particular was highlighted as a desire to improve comfort while walking.

- Lack of sidewalks and narrow sidewalks makes walking and rolling feel unsafe due to proximity to traffic.
- Many destinations don’t have safe places to lock and store bikes, skateboards, scooters, and other belongings.
- Walking along Hillsdale Boulevard feels unsafe due to narrow sidewalks and speed of traffic. When asked about the bike lanes, one student mentioned that they feel safe to bike on currently, although other students were also interested in additional buffered space from car traffic.
- Elkhorn Boulevard was highlighted as an unsafe place to walk or bike due to speed and volume of traffic. Students indicated that many people don’t walk there currently.

### Opportunities

- Overall, students want more separation between pedestrians,

bicyclists, and cars. The types of infrastructure that they most want to see in the Foothill Farms neighborhood include crosswalks, sidewalks, and Class IIB buffered bike lanes. For crossing treatments, students were most interested in high visibility striping and leading pedestrian intervals.

- Some of the types of infrastructure improvements that students’ did not like included curb extensions, median refuge islands, and Class I shared use paths. For curb extensions and median refuge islands, students mentioned that cars crash into them (and physical property as a result), and that drivers still tend not to yield to allow pedestrians to finish crossing. For shared use paths, students indicated that bicyclists can be aggressive and were concerned about pedestrian and bicycle conflicts.
- Other investments that students would like to see include shade trees and wayfinding.

### Virtual Workshops - May 18 and 20, 2021

#### Attendees

##### Project Team Staff

- Mikki McDaniel, Sacramento County Department of Transportation
- Bailey Affolter, Sacramento County Department of Transportation
- Libby Nachman, Alta Planning

- Kiara Reed, WALKSacramento
- Alicia Brown, WALKSacramento
- Molly Wagner, WALKSacramento
- Jordan Grimaldi, WALKSacramento
- Mileda Bermudez, Spanish Interpreter

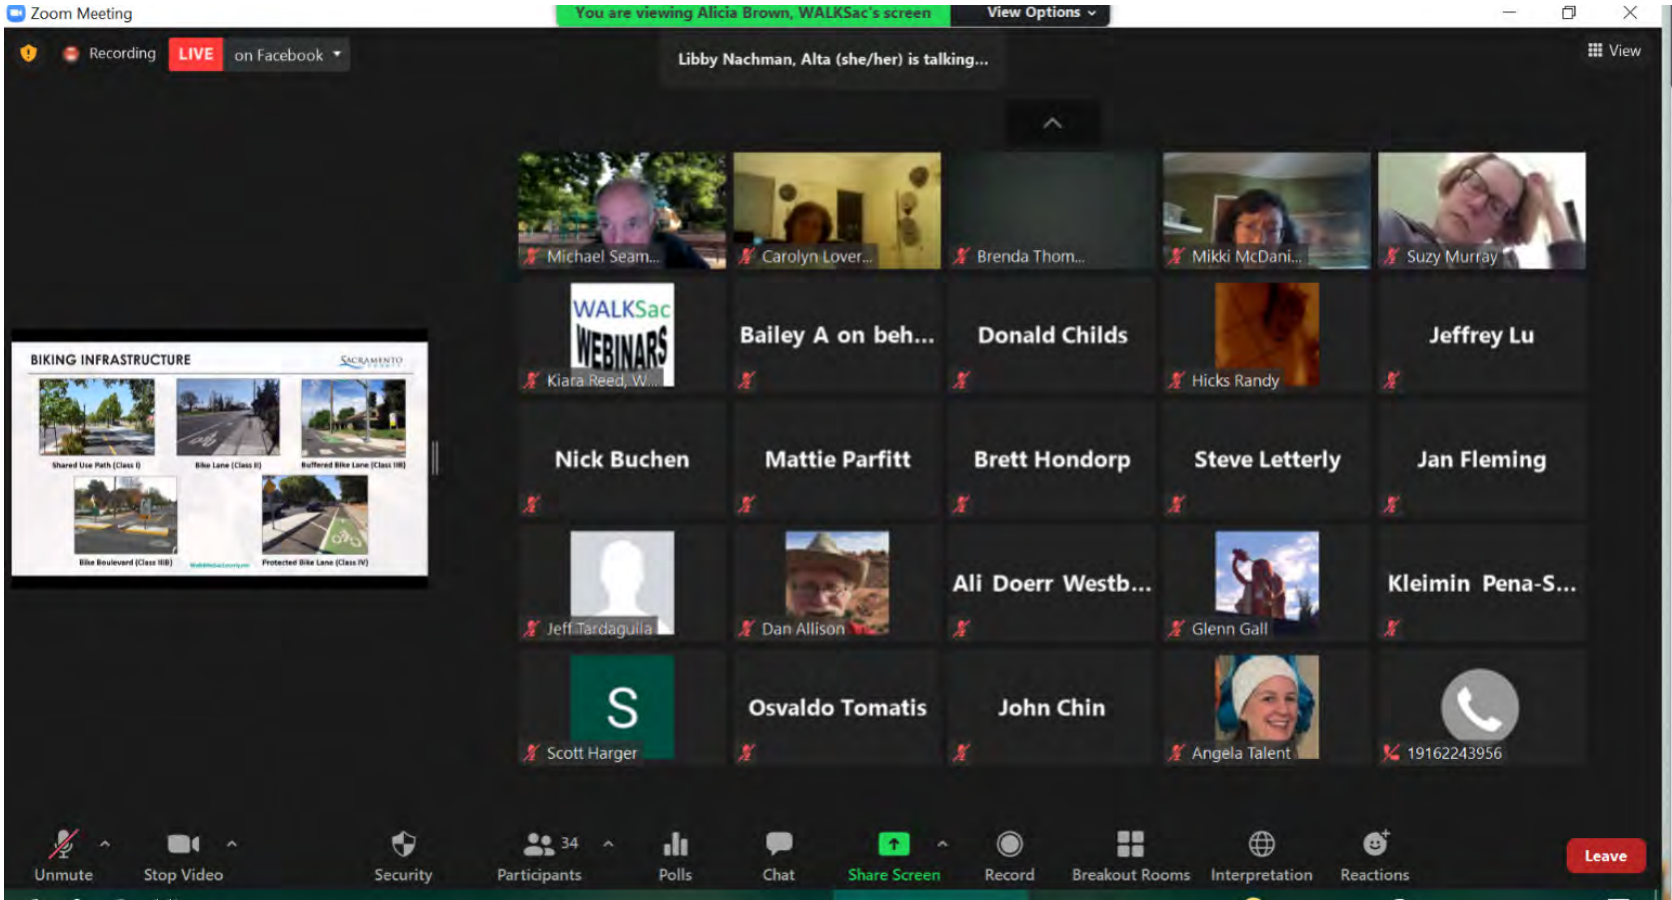

Tuesday, May 18th from 6:00 - 7:30pm

- 8 project staff

- 27 attendees via Zoom
- 3 attendees via Facebook Live

Thursday, May 20th from 12:00 - 1:30pm

- 7 project staff
- 17 attendees via Zoom
- 4 attendees via Facebook Live

Spring Evening Workshop.

## Workshop Summary

Two workshops were held on Tuesday, May 18th and Thursday, May 20th for the Sacramento County Active Transportation Plan. The goal of the workshops was to share the draft infrastructure recommendations that were developed after Phase I and to gather feedback on what types of infrastructure recommendations participants liked, didn't like, and opportunities for improvement. The workshops began with a presentation about the Active Transportation Plan, followed by a demonstration of the webmap tool. Online polls and open discussion portions were interspersed throughout to get a better sense of project priorities and preferences on draft infrastructure recommendations.

## Input Received

### Goals and Priorities

- When asked about what they would like to see on their "dream streets", workshop participants indicated wide and well-maintained sidewalks, trees,

streets without cars, 20mph roads, protected and separated bikeways, audible signals, lighting, smooth pavement without potholes, and seating.

- Across both of the workshops, participants overwhelmingly indicated safety as the highest priority for project implementation (48% on May 18th and 50% on May 20th). At the May 18th workshop, the second highest priority was community need (18.5%) and the third highest priority was access (15%). At the May 20th workshop, community need, equity, and access were all tied for the second highest priority (14%).
- Access from a disability perspective was highlighted as an important priority for many participants across both of the workshops.
- Sidewalk infill and maintenance was another priority that participants brought up across both workshops. In particular, there is a need for

prioritizing sidewalks near schools for a Safe Routes to School approach.

- First and last mile access to and from transit is important for ensuring that people are able to complete trips to any destination, especially by walking or rolling.
- Participants wanted better connections between neighborhoods to commercial and recreational destinations.
- Overall, participants expressed a desire for greater separation of active transportation modes from vehicle traffic.
- Other priorities included feasibility of funding, focusing improvements on streets that don't have room for bike lanes, and addressing pre-existing issues before starting new projects.

*Spring Evening Workshop. 14 Respondents.*

### Preferred Infrastructure Improvements

- Participants were invited to participate in a poll about desired pedestrian infrastructure improvements in their communities. Participants were able to vote for as many improvements as they liked.
  - At the workshop on May 18th, the top three pedestrian improvements that participants wanted to see in their communities were curb extensions (17%), sidewalks (15%), and crosswalks (15%).
  - At the workshop on May 20th, the top three pedestrian improvements that participants wanted to see in their communities were sidewalks (25%), leading pedestrian intervals (20%), and curb extensions (15%).
- Participants were invited to participate in a poll about desired bicycle infrastructure improvements in their communities. Participants were able to vote for as many improvements as they liked.
  - At the workshop on May 18th, the top three bicycle improvements that participants wanted to see in their communities were protected bike lanes (27.5%), bike boulevards (20%), and buffered bike lanes (20%).
  - At the workshop on May 20th, the top three bicycle improvements that participants wanted to see in their communities were shared use paths (33%), buffered bike lanes (33%), and protected bike lanes (16%).
- In addition to the above infrastructure preferences, participants also indicated a need for the following improvements to comfort and safety of walking, biking, and rolling:
  - There need to be more pedestrian oriented street lights, especially at intersections. Lack of streetlights was a particular issue in the Carmichael neighborhood.
  - There is a need for sidewalk infill in neighborhoods that do not currently have sidewalks, such as Fair Oaks.
- There need to be more consistent implementation of pedestrian pushbuttons. For example, when crossing from Cottage Way to Winding Way across Watt Avenue, the pedestrian pushbutton is only on one side of the street.
- Additional infrastructure that participants generally supported or expressed a desire for included:
  - Protected bike lanes
  - Median refuge islands
  - Leading pedestrian intervals
  - Curb extensions
  - Roundabouts could be considered in place of signalized intersections where feasible

[illegible]

Spring Evening Workshop. 14 Respondents.

**Which bicycle improvements would you like to see in your community (select all that apply)? If you select "other," please type your response in the chat.**

Spring Evening Workshop. 14 Respondents.

### Infrastructure Improvements of Concern

- Participants were invited to participate in a poll about pedestrian infrastructure improvements that they have concerns with or would not want to see in their communities. Participants were able to vote for as many improvements as they did not like, with the option to say they liked all types of improvements.
  - At the workshop on May 18th, most participants responded that they liked all types of pedestrian improvements (29%). However, the top pedestrian improvements that participants did not want to see in their communities were median refuge islands (14%), pedestrian hybrid beacons (14%), rectangular rapid flashing beacons (9.5%), and curb extensions (9.5%).
  - At the workshop on May 20th, most participants responded that they liked all types of pedestrian improvements (50%). However, the top pedestrian improvement that participants did not want to see in their communities was no right on red signals (50%).
- Participants were invited to participate in a poll about bicycle infrastructure improvements that they have concerns with or would not want to see in their communities. Participants were able to vote for as many improvements as they did not like, with the option to say they liked all types of improvements.
  - At the workshop on May 18th, most participants responded that they liked all types of bike improvements (39%). However, the top bicycle improvements that participants did not want to see in their communities were shared use paths (17%), buffered bike lanes (11%), and bike boulevards (11%).
  - At the workshop on May 20th, most participants responded that they liked all types of bike improvements (67%). However, the top bicycle improvements that participants did not want to see in their communities were bike boulevards (17%) and protected bike lanes (17%).
- Participants indicated concerns with protected bike lanes for a variety of reasons, including that they take up too much roadspace, they are not safe for bicyclists if they are poorly designed, impacts to bus stop access, and impacts to accessibility overall, especially for people who are blind or low vision.
  - Participants were interested in learning more about the specific design of the proposed Class IV bike lanes, particularly their impact on bus stops along Howe Avenue, Fulton Avenue, and El Camino Avenue.
- Participants shared concerns with leading pedestrian intervals and other signal improvements, particularly how they will impact audible signals and people who are blind or low vision.
- Rectangular Rapid Flashing Beacons, pedestrian hybrid beacons, and other signal improvements must be

coordinated with audible signals to be safe for pedestrians who are blind or low vision. There were also concerns that flashing lights may cause headaches or seizures.

- Participants generally did not like shared use paths due to potential conflicts between pedestrians and bicyclists, and indicated that more education or fully separated facilities between pedestrians and bicyclists would be ideal.
- Additional questions and concerns about bike infrastructure included ensuring that cars would not use the bike lane as a passing lane and providing dedicated bike parking so that bikes, scooters, and shared rideables would not be left in the sidewalk.

### Challenging Locations

- Throughout both of the workshops, participants shared specific locations that remain challenging for walking, biking, and rolling. These locations include:

- The County previously removed a pedestrian and bike ramp at the Merrywood and Country Club Center in Arden Arcade, which restricts active transportation access.
- Large intersections that are difficult to cross include Arden Way and Cottage Way, and El Camino Avenue and Eastern Avenue.
- There is a Dutch Bros across from El Camino Fundamental High School that attracts a lot of traffic and is not pedestrian and bike friendly.
- A lot of people use active transportation along Winding Way between Fair Oaks Boulevard and Illinois Avenue, even though there are no sidewalks and there is not enough space to walk, bike, or roll.
- Scripps Drive was designed for vehicles, and the sidewalks were installed before ADA requirements. The sidewalks are at

an extreme angle and are also now broken.

- Madison Avenue has areas of the street that need repaving.
- There is a need for a bike path by Haggin Oaks and Howe Park.
- Sidewalks have been requested on Bell Avenue for access to Dyer Kelly Elementary and on Howe Avenue for access to Howe Ave Elementary, but have not been installed for years.

### Lessons Learned

- Tuesday, May 18th:
  - Stop sharing screen after discussion slide
  - End Zoom meeting to log everyone off before debrief
  - Interpretation worked well, including recording in Spanish
- Thursday, May 20th:
  - Make sure to engage with more members of the blind community

- o Make sure there's a similar # of bike and ped projects in final plan, or show in comparable terms
- o Mikki to chat with disability advisory committee about class IVs and transit access

### Key Questions

- Funding
  - o To what extent will this plan be supported by funding? What is the commitment in resources to actually implement the plan?
  - o Are there any actual grants or other funding sources that are actively being pursued right now?
  - o Our community of Arden Arcade would receive a whole lot more money for transportation if it was an incorporated city. Would the County be supportive of establishment of new cities?
- Education and Programming
  - o Will there be any consequences for bicyclers who ride on sidewalks?
- o How will education for pedestrian safety be addressed to driving community?
- o Will safe routes to school specifically be addressed in this plan?
- System Connectivity
  - o How are County bike routes coordinated with City of Sacramento bike routes?
  - o What amount of collaboration are you doing with Rancho Cordova where shared boundaries are concerned, like Bradshaw Rd and Old Placerville Rd?
  - o How does this Plan intersect with SACOG's trails plan and also help provide connections with Sacramento's Transportation Priorities Plan?
- Disability Accessibility
  - o Who is on the technical advisory committee? In particular, people with disabilities need to be on the technical advisory committee and part of the design process.
- o How does the webmap tool work for those visually impaired? Can it screen read?
- o Has the project established a list of mobility needs?
- o What are your plans to implement and install more audible signals? What, if anything, will the plan do to have a more formalized way of implementing these installments?
- o Will the blind community be consulted to determine which intersections will be most beneficial?
- Infrastructure and Design
  - o What is the typical vehicle speed that is considered conducive to a "walkable" community?
  - o Is there a pedestrian crossing option that has proven to be more effective at preventing collisions and pedestrian accidents? Crosswalks seem to be largely ignored by drivers.

# Digital Engagement Summaries

- o Will maintenance of existing sidewalks (such as lifted panels or trip hazards) be addressed as part of the Plan? Will it be a priority to make ALL sidewalks safe, specifically existing sidewalks, for pedestrian travel?
- o For Class IV bike lanes, are you coordinating with maintenance staff for sweeping/cleaning of the bike lanes? If a street sweeper cannot fit, what measures are being taken?
- o There are around 1500 bike projects but only 93 pedestrian projects. Given almost everyone is a pedestrian at some point but not all of us ride bicycles, why is the plan so bike heavy?
- o Is there a published schedule of sidewalk and road maintenance for the various county areas? Does this include limitations on funding for the various areas?
- o Are there plans to implement and install more pedestrian signals?

## ONLINE COMMUNITY SURVEY - WINTER 2020/2021

### Survey Statistics

During the first phase of community engagement, over 830 community members took the online survey. The survey opened in July 2020 and closed in January 2021. The survey was made available in both English, Spanish, and Russian. There were 832 English responses, 15 Spanish responses, and 4 Russian responses. The survey was sent out to multiple Sacramento County newsletter lists, post on social media, and distributed through partnerships with community-based organizations. A summary of survey findings is in the next section.

### Demographics

The survey was taken by a diverse range of Sacramento County residents. All age groups were well represented except the age 74 and older group. About half of residents identified as non-white (two percent American-Indian or Alaska Native, 12 percent Asian, 12 percent black, five percent Native Hawaiian or Pacific Islander, and 19 percent Latino. The survey respondents are 47 percent women, 42 percent men, and 4 percent nonbinary.

### Key Survey Takeaways

#### Pre-COVID travel behavior

Almost two-thirds of survey participants walked/ran for fun or exercise during normal times, and nearly half of participants walked to reach a destination (store, school, work, etc.). Over 40 percent of participants stated that they bicycle for fun or exercise, and

just under 30 percent said that they bike to destinations. Less than one-fifth of respondents indicated that they took public transportation. There were no substantial differences between respondents' use of modes between pre-COVID and current times. The one exception was a about a 10% drop in respondents taking public transit.

### Active Transportation to Destinations

Respondents were asked what destinations they would walk or bike to if it was more comfortable and convenient. Four answer choices were selected by at least 40 percent of all respondents (in order from most to least selected): parks (60 percent), fun or exercise (56 percent), stores (54 percent), and restaurants/bars (41 percent). These are the destinations that residents are most likely to walk or bike to. Trips to/from school were only selected by 26 percent of respondents. In a separate question, parents of school-aged children were asked what

factors would encourage more walking and biking trips. The top four responses are safety (traffic-related), safety (crime-related), if the school was closer, and if there were more ways to cross the street along their route.

### Walking

When asked how much they agree with, "I feel comfortable walking around in my community," only 15 percent of respondents strongly agreed. Over 45 percent of respondents were either neutral (33 percent) or disagreed (13 percent) with the statement. Over 50 percent of respondents indicated that they were concerned about being hit by a car and crime and personal safety. Poor or lack of streetlights and missing sidewalks were listed as concerns by over one-quarter of respondents. The top five changes that would increase respondent comfort (listed by over one-third of respondents) are safer ways to cross the street, slower traffic, building sidewalks where they are missing, better lighting for pedestrians, and fixing broken sidewalks.

### Bicycling

When asked how much do you agree with, "I feel comfortable biking around in my community," only 9 percent of respondents strongly agreed. Over 59 percent of respondents were either neutral (38%) or disagreed (21%) with the statement. Over two-thirds of respondents indicated that they were worried about being hit by a car. Over one-third of residents indicated that they were concerned about crime and personal safety and the lack of bike lanes or paths to bicycle. Over one-quarter of respondents were concerned about having no streetlights at night and having no secure bike parking at their destination. Building more bike lanes/other dedicated facilities was the most selected improvement, by 55% of respondents. Three additional improvements were selected by over 40% of respondents: slower traffic, greater separation from vehicle traffic, and wider bike lanes.

## Interactive Web Map Summary - Summer 2020 - January 2021

The first phase of the interactive web map launched in summer 2020 and closed in January 2021. Over 420 comments were left on the interactive web map. Users could draw their current or preferred walking or biking routes and drop points at intersections or other locations that they had comments on. Users could like, dislike, and leave additional comments on others' routes and points. The public identified concerns on over 110 different roadway segments and over 70 intersections.

The following issues were noted throughout the County:

- Missing sidewalks are barriers
- Desire for safer routes to schools and libraries
- Safer park access
- More and enhanced river crossings
- Poor light rail station access
- Uncomfortable intersection crossings

- Desire for safer bicycle facilities

The most frequently mentioned corridors needing improvement were:

- Fair Oaks Boulevard
- Watt Avenue
- Whitney Avenue
- Cypress Avenue
- Bell Street
- Winding Way
- Madison Avenue

## Themes for Recommendations

Based on an analysis of both the concerns of people walking and biking and their stated preferences for potential improvements, the following themes should influence the development of pedestrian and bicycle recommendations.

- Parks, commercial areas, and entertainment districts are the most desired walking and biking destinations. The development of priority areas should include considerations for these destinations.

- Infrastructure safety improvements are the top items that would make parents more comfortable letting their children walk or bike.
- Enhanced and safer ways to cross the street and closing sidewalk gaps are important priorities for pedestrians in Sacramento County.
  - Improved crossings are especially important around schools.
- A super-majority of bicycling respondents are concerned about being hit by cars. Building low-stress, separated bikeways will make more people comfortable and attract additional bike trips.
- Sacramento County residents love to walk, run, and bike for fun and exercise. Improving access to trails and implementing neighborhood-scale improvements will create an attractive walking and biking environment for various trip types.
- Provide wider shoulders in rural areas.

## Phase 2 Recommendations Webmap Comments - Spring and Summer 2021

The following three tables present all public comments from the website and interactive map during Phase 2 Engagement. Table B-1 includes general comments left via the website's contact form. Over 30 website contacts and emails were received by the project team during the project. Table B-2 contains comments on sidewalk recommendations. Table B-3 has comments on recommended bicycle projects.

Table B-1. General Comments

Comment	Submission time	Category
On all bike paths please paint the names of the streets that that the exit takes you too. When you pass the access paths you don't know what street it takes you to.	10/3/2020 8:36	Wayfinding
Can you explain better what each of the class trails mean. Maybe when we click on the legend you can click on the class and there will be an EASY to understand explanation of the class.  Example: cars, no cars, horses, no horses, bigger lane next to road, width of trail, anything else you know that we don't know etc.	4/28/2021 18:14	Website
The street INDUSTRY- has multiple land owners, businesses and fencing. It does NOT go all the way through to Winona.  I can send pictures as it won't allow me to upload.  There is an OLD railroad track (on some private land) not being used and would make a perfect walking area- behind the businesses on Orange Grove (from Off Roseville Rd to Orange grove (next to Watt Avenue) no cars- perfect area to upgrade. The PBID would love to give this area 'a sense of place,' which connects the area.	5/7/2021 11:46	Trails
I appreciate the work that has been done on this, but there still needs to be considerable improvement in the downtown area (within 5 miles of downtown) for people who commute downtown for work.	6/10/2021 11:16	General
Hi, I'd like to comment but I'm not getting an option when I click on the map recommendation. I think the bike path and the sidewalk idea in Freeport and connection to Sacramento is perfect.	6/15/2021 17:02	Infrastructure

Table B-1. General Comments continued

Comment	Submission time	Category
Looking at your plans I very much like the bike trail concept . Regarding the sidewalk I would need to know how much additional room next to the road it would require. If we have to give up some of our property line and move fences & landscaping I would have issues with the project. My address is **** Freeport Blvd. 95832 .Best Regards, Bob Lake	6/16/2021 17:00	Sidewalks
I am excited to see the proposed bicycle paths proposed for the Herald area. A few sidewalks would be nice, like on Ivie Rd., by the school and post office and Herald Rd., by the store and park.	6/23/2021 18:07	Sidewalks
Love the buffered bike lane down Arden for Arden and Mariemont school kids and bikers trying to safely get to American Rive bike trail.  But how are bikers supposed to get safely across busy Fair Oaks using the bike boulevard from Los Molinos to Estates? There is no light there. Why not San Ramon to Wilhaggen where there is a light? That is the way I go instead of dangerous Arden (Maple Glenn—which could connect to Winding Creek BB—to La Sierra to San Ramon, Wilhaggen, Crondall to Estates)	6/24/2021 11:13	Infrastructure

Table B-2. Sidewalk Recommendation Comments

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
435	Anonymous	Sidewalk Gap	Bayou Way			Walkability to Airport	0	0	4/28/2021 16:48
436	Sarah R Morgan	Sidewalk Gap	Chicago Ave			Road is a narrow two lane with no sidewalks and have been run off the road in the past few months while I was running.	0	0	4/28/2021 17:26
437	Sarah R Morgan	Sidewalk Gap	Fair Oaks Blvd			Small area of sidewalk missing between Temple Park and shopping center on corner	0	0	4/28/2021 17:33
438	PATTY WAIT	Sidewalk Gap	Morse Ave	Keeney Way	Hurley Way	There are no side walks on Morse. There is a fair amount of traffic.	2	0	4/28/2021 17:39
439	Patricia Furey	Sidewalk Gap	Fair Oaks Blvd	Wedgewood Ave		Corner of Fair Oaks Blvd and Wedgewood in front of dental office. The sidewalk ends, at the north of entrance to parking lot. Positions pedestrians to be just a foot away from passing traffic. Very dangerous for pedestrians to navigate.	0	0	4/28/2021 18:37
440	Patricia Furey	Sidewalk Gap	Tarshes Dr			The entrance to Tarshes requires pedestrians to cross California Ave without a crosswalk. The concrete dividers that separate the foot path from the road are crumbling or gone. Cars turning east onto Tarshes take the corner fast without looking for pedestrians and drive into the designated walking lane.	0	0	4/28/2021 18:54
441	Patricia Furey	Sidewalk Gap	Fair Oaks Blvd	Wedgewood Ave		Continuation of improvement in front of Dental Office on the corner of Fair Oaks and Wedgewood.	0	0	4/28/2021 19:02

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
457	Vincent King (SRPD)	Sidewalk Gap	Mendocino Blvd			Southgate will add sidewalk, but would love DOT help completing it along Mendocino.	0	0	6/9/2021 12:58
458	Vincent King (SRPD)	Sidewalk Gap	47th Ave			gap	0	0	6/9/2021 13:00
459	Vincent King (SRPD)	Sidewalk Gap	Orange Ave			link parks and schools	1	0	6/9/2021 13:01
460	Vincent King (SRPD)	Sidewalk Gap	Orange Ave	Persimmon Ave		gap. Link to Park and Community Center.	0	0	6/9/2021 13:04
-	Ruth Ann Bertsch	Comment				Morse here needs to slow down the cars. they think they're on an expressway when they turn from Arden onto South-bound Morse. Bike lanes are already present for some of this.			6/10/2021 15:57
-	Ruth Ann Bertsch	Comment				the cars need to slow down on Morse. People turn onto Morse from Arden acting as if it were a speedway. Bike lanes won't be enough.			6/10/2021 15:58
461	Ruth Ann Bertsch	Sidewalk Gap	Sierra Blvd	Barberry Ln	Larch Ln	it is a shame that we appear to be requesting sidewalks on the direct, straight but noisy and busy streets when we could be routing pedestrians through some of our most beautiful neighborhoods.	2	0	6/10/2021 16:07
462	Fayzah	Sidewalk Gap	Bradshaw Rd	Lincoln Village Dr		LPI (leading Ped Interval) would be nice to reduce conflict with northbound cars turning east at the intersection. Also the ped refuge in this crossing is too small to accommodate more than one person, like families or 2+ cyclists. Many cars use the slip lane that should not BE in the slip lane, and they don't yield to peds.	0	0	6/11/2021 11:10

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
463	Fayzah	Sidewalk Gap	Bradshaw Rd	Old Placerville Rd		LPI for signal here would be good. Also my kids, travelling northbound going home from Dollar Tree, have almost been struck by the cars turning north coming off Old Placerville (right on red) several times, and once I witnessed a similar near-miss with a woman travelling in an electric wheelchair ahead of me in the crosswalk. Having/using our right-of-way should not be so scary.	0	0	6/11/2021 11:28
464	Lee Frederiksen	Sidewalk Gap	Landis Ave			Landis Ave is extremely dangerous to walk along. It has a lot of traffic, is very narrow, and has no shoulders to step onto when a car is coming.	0	0	6/12/2021 7:29
465	A.B.	Sidewalk Gap	48th Ave			Sidewalk gap along 48th Ave. This is critical route for students traveling to school.	0	0	6/22/2021 17:55
466	A.B>	Sidewalk Gap	48th Ave	Wesley Ave	49th Ave	Sidewalk gap limits low-stress routes to school and the park.	0	0	6/22/2021 17:57
467	Anonymous	Sidewalk Gap	Wesley Ave			the sidewalks gap and crossings at Cuny Ave and Wesley do not make sense.	0	0	6/22/2021 17:58
468	Anonymous	Sidewalk Gap	Martin Luther King Jr Blvd	49th Ave		horrible connections because sidewalk is missing. Students have no where to walk.	0	0	6/22/2021 18:00
469	Sue Schooley	Sidewalk Gap	Buena Vista Ave	Corona Vista Way		this is a major route for high school students to get to BV high school, very fast traffic, yet no sidewalks on either side. high importance for Safe Routes to Schools	0	0	6/23/2021 17:08

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
470	Sue Schooley	Sidewalk Gap	Buena Vista Ave			both sides of Buena Vista lacking sidewalk and its a major route to BV for high school students (not sure if my earlier comment went through—might be duplicate)	0	0	6/23/2021 17:10
471	Maria Trefilova	Sidewalk Gap	Locust Ave			Missing sidewalk	0	0	6/23/2021 20:57
472	Maria Trefilova	Sidewalk Gap	Locust Ave	Hackberry Ln		Missing sidewalk	0	0	6/23/2021 20:58
473	Maria Trefilova	Sidewalk Gap	Hackberry Ln			Missing sidewalk	0	0	6/23/2021 20:59
474	Maria Trefilova	Sidewalk Gap	Locust Ave	Virgusell Cir		Missing sidewalk	0	0	6/23/2021 21:01
475	Maria Trefilova	Sidewalk Gap	Hackberry Ln			Missing sidewalk	0	0	6/23/2021 21:02
476	Maria Trefilova	Sidewalk Gap	Garfield Ave			Missing sidewalk	0	0	6/23/2021 21:03
477	Tamie Dramer	Sidewalk Gap	Watt Ave			There are no crosswalks or lights for safe ped/cycle crossing here.	0	0	6/24/2021 14:46
478	Dorothy Putnam-Smith	Sidewalk Gap	Cardinal Rd			No sidewalks for Children to school or bicycles. This thoroughfare is used a lot by people picking their children up from school, sidewalks are essential.	0	0	6/27/2021 13:10
479	Barbara Moore	Sidewalk Gap	Cypress Ave			Sidewalk on North side of Cypress between Dena Way and Pasadena.	0	0	6/27/2021 19:39

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
480	Heidi Satter	Sidewalk Gap	Mills Rd			Sidewalks needed for the safety of the many students at the nearby school. Safe walk routes to school may help reduce tremendous vehicle traffic.	1	0	6/29/2021 8:00
481	Dean Dal Ben	Sidewalk Gap	Starburst Way			Sidewalks are needed on both sides of Starburst Way from Sunnyfield Way to Jacinto Ave. Starburst Way is used by people walking to the North Laguna Creek Park as well as getting to Jacinto Ave to go to CRC and Barbara Comstock Morse elementary school. This area turns into a muddy mess during the rain and people walking or riding bikes in the street are in danger from vehicles driving on this roadway.	0	0	6/29/2021 16:43
482	Dean Dal Ben	Sidewalk Gap	Bruceville Rd			Gap is on west side of Bruceville Rd. A safe walkway is needed to walk safely north on Bruceville to get to CRC or Barbara Comstock Morse Elementary School or the library or go south on Bruceville to get to businesses near Bruceville and Center Parkway.	0	0	6/29/2021 16:51
483	Dean Dal Ben	Sidewalk Gap	Bruceville Rd			This section on the west side of Bruceville Rd leads to the several businesses located in the area defined by Bruceville Rd, Sheldon Rd. and Center Parkway. People need a safe way to avoid the heavy traffic on Bruceville Rd when they walk to or from this business area.	0	0	6/29/2021 16:59

Table B-2. Sidewalk Recommendation Comments, continued

ID	Name	Type	Street	Street 2	Street 3	Comment	Likes	Dislikes	Date
484	Dean Dal Ben	Sidewalk Gap	Jacinto Ave			There is an interior sidewalk within the North Laguna Creek park along the northwest side of the park facing Jacinto Ave but this curves deeply within the park away from the road. For the safety and convenience of those walking in this area who want a more direct walking route, the city should provide a city sidewalk as normal near the road and not take advantage of park funds/bonds to pay for a city sidewalk vs. a park walkway.	0	0	6/29/2021 17:08
485	Lee Frederiksen	Sidewalk Gap	Landis Ave			Need sidewalks. Very dangerous to walk.	0	0	6/30/2021 10:43
486	Carrie Frederiksen	Sidewalk Gap	Landis Ave			Landis Ave is very dangerous to walk/bike on.	0	0	6/30/2021 10:46
487	Scott Harger	Sidewalk Gap	Watt Ave			Heading South on the west side of Watt the sidewalk abruptly ends and a pedestrian is forced out onto Watt.	0	0	6/30/2021 14:46
488	Scott Harger	Sidewalk Gap	East of Watt Ave			This is a drive way into the Telephone Building. The cross slope of the driveway can force a wheelchair user into oncoming traffic. Hazardous for a hand cycle.	0	0	6/30/2021 14:51
489	Scott Harger	Sidewalk Gap	Marconi Ave			This is a well used pedestrian and bike Path of travel, to access Rayleys and bus stops. Both sides of Marconi need to be addressed.	0	0	6/30/2021 14:57

# Appendix C: Project Recommendations and Prioritization

# Introduction

This section presents an approach for prioritizing the list of active transportation projects that will be identified countywide. This approach includes a summary of the prioritization process, identification of preliminary prioritization categories, and review of the proposed criteria used for scoring of each category. A brief overview of additional factors that can affect the programming of projects for implementation after prioritization has been finalized are presented at the end of this memorandum. These questions include a discussion of how equity and Environmental Justice Communities should be considered.

The type of project will affect the prioritization process. For example, bicycle facilities are generally used for longer distance or regional travel, and so will be scored at the corridor level, while pedestrian projects have more local relevance and will be scored at the individual project level. However, it is possible to bundle both bicycle and pedestrian projects together to form larger "Complete Streets" improvement packages.

# Prioritization Process

The project prioritization process includes the following steps:

- **Identification of categories.**

Development of the prioritization categories in coordination with the project team along with a breakdown of the meaning and relevance of each category to confirm purpose and understanding of the purpose and scope of the process. The categories used in the process follow the identified goals for the project.

- **Weighting of Criteria.** The criteria will be weighted to determine their overall contribution to the project score.

- **Initial Project Scoring and Calibration.** Based on the selected weighting factors and local scoring criterion, the prioritization analysis will be performed to establish a preliminary ranking of projects for review by the project team. To facilitate the team's review, the summary may include development of charts, maps, tables and/or infographics.

## Prioritization Categories

Prioritization categories address a range of local needs and allow differences between projects to be identified.

To ensure that the prioritization process follows the identified goals of the project, each of the proposed categories are associated with a goal as follows:

- **Safety and Comfort** – This project is located on a facility with an observed high crash frequency and has potential to improve safety. Safety factors will include whether or not a project is located on a High Injury Corridor and if any recent crashes have occurred related to that specific location or segment. Comfort factors depend on if this project improved the ranking of the facility with regards to the Bicycle or Pedestrian Level of Traffic Stress analysis and the Caltrans Bikeway Selection Guide.

- **Connectivity and Access** – This project improves accessibility to key destinations via the bicycle or pedestrian network and connects to networks in incorporated cities or regional trails.
- **Equity** – This project is located within an Environmental Justice Community.
- **Implementation** – While many factors affecting implementation cannot be quantified easily before prioritization, community support represents a critical element of project feasibility. Projects that are community-identified challenge areas or recommendations will be prioritized.

While this list is expected to include most prioritization categories, additional categories can be identified if desired. Also, specific categories of projects can be pulled out to be ranked or identified separately, such as bicycle versus pedestrian projects, or regional trails.

## Prioritization Scoring Criteria

The County will first assign scores to each category, and then create a combined score by weighting the score for each category by the relevant local weighting factor. Each prioritization category has been given a recommended scoring criterion based on various factors related to each category. The proposed prioritization scoring for bicycle and pedestrian projects are provided in Table C-1. Preliminary recommendations for criteria scores are also provided.

## Weighting of Prioritization Categories

An appropriate weight for each prioritization category will be in consultation with the county and other relevant stakeholders. Criteria may be weighted equally or assigned different weights to emphasize the criteria of one category over another.

## Moving From Prioritization to Implementation

A prioritized list of projects provides valuable guidance for County staff moving forward. The list provides direction and an implementation order based on a variety of factors including funding opportunities, local maintenance schedules, community support, and other feasibility considerations. As such, the County will consider these factors when

programming, and implementing recommended projects. This will further advance Goal 4: Implementation.

Table C-1 provides the full prioritization breakdown for pedestrian projects. Table C-2 provides the full prioritization of sidewalk gap projects. Table C-3 provides the prioritization breakdown for recommended bicycle projects.

Table C-1. Pedestrian Intersection Recommendations

# Community Partnerships for Active Transportation Programs

Throughout Sacramento County, there are many community-based organizations, advocacy groups, and agencies that can assist the County in supporting walking, biking, and

rolling. **Table C-4** provides information on how active transportation-related organizations may be able to partner with the County to implement the proposed programs.

Table C-4. Community Partners for Active Transportation Programs

Organization	Educational Programs	Encouragement Programs	Support Programs	Safe Routes to School Programs	Evaluation Programs	Infrastructure Programs
AARP Sacramento Chapter	•	•				
After School Education and Safety Programs	•			•		
Bike Lab	•		•			
Black Girls Do Bike: Sacramento	•	•				
Boys and Girls Club	•			•		
City Year				•		
Contagious Wheels		•				
Health Education Council		•				
Pro Youth and Families	•			•		
Project Hero		•	•			
Property Business Improvement Districts			•			•

Organization	Educational Programs	Encouragement Programs	Support Programs	Safe Routes to School Programs	Evaluation Programs	Infrastructure Programs
Sacramento Area Bicycle Advocates	•	•	•	•		
Sacramento Bike Hikers	•	•	•			
Sacramento Wheelmen Bicycle Group		•				
Transportation Management Agencies	•	•	•		•	•
WALKSacramento	•	•	•	•	•	

•: Organization may be a fit for partnering with County to implement programs in the indicated category.

# Appendix D: Procedure for Incorporating Active Transportation Plan (ATP) Changes Into GIS

The following procedures identify the steps and individuals responsible for ensuring that changes to the Active Transportation Plan network are accurately captured in GIS and kept up to date. The actual changes to the GIS layer will be done by the County GIS Division through coordination with SacDOT's Alternative Modes Coordinator.

### **Recommended Active Transportation Network Changes**

Changes to the "Recommended Bicycle Network" of the ATP come from five sources.

1. Changes to the General Plan that are then incorporated into the ATP.
2. Changes to the ATP initiated by SacDOT.
3. Adoption of a Specific Plan.
4. Other parties such as Park Districts.
5. Results of a transportation study.

Proposed changes are to be routed to SacDOT's Alternative Modes Section for review and comment prior to adoption. Attribute information should include status of approval (i.e. "Recommended, Not Approved" and "Approved" and date of change. Once adopted, changes are to be routed to SacDOT's Alternative Modes Section who will coordinate with GIS Division staff.

### **Existing Condition Changes**

Changes to Chapter 4, "Existing Conditions" of the ATP come from five sources.

1. SacDOT capital improvement projects
2. SacDOT maintenance division overlay projects with new bicycle striping
3. SacDOT Alternative Modes striping and signing projects
4. Other County Departments such as DWR or Regional Parks
5. Developer improvement projects

### **Responsibility for Transmitting Changes**

PER will be responsible for transmitting General Plan changes to the Alternative Modes Section.

The SacDOT Design Section Principal Engineer will be responsible for transmitting changes (typically as-built plans) initiated by SacDOT Capital Projects to the Alternative Modes Section.

The SacDOT Maintenance Design Section Senior Engineer will be responsible for transmitting changes (typically as-built plans in AutoCAD) initiated by SacDOT Maintenance Projects to the Alternative Modes Section.

The SacDOT Transportation Planning and Development Services Principal Engineer will be responsible for transmitting changes initiated by Specific Plans and approved Development Plans to the Alternative Modes Section.

The Alternative Modes Section will be responsible for monitoring the progress of new construction of bicycle facilities.
